THE HISTORY OF RELIGION.

A RATIONAL ACCOUNT

OF

THE TRUE RELIGION.

BY

JOHN EVELYN,

AUTHOR OF "SYLVA," ETC.

NOW FIRST PUBLISHED FROM THE ORIGINAL MS. IN THE LIBRARY AT WOTTON.

"I am verily persuaded that errors shall not be imputed to them as sin, who use such measures of industry in finding Truth, as human prudence and ordinary discretion (their abilities and opportunities, their distractions and hindrances, and all other things considered) shall advise them to."—CHILLINGWORTH.

EDITED, WITH NOTES,

BY THE REV. R. M. EVANSON, B.A.

IN TWO VOLUMES.

VOL. I.

BY HIS OBLIGED AND FAITHFUL SERVANT,

THE EDITOR.
EDITOR'S PREFACE.

"He, being dead, yet speaketh."

After a peaceful slumber of nearly two centuries in the Wotton Library, the original manuscript from which this work is printed was last year brought into light and notice by the publication of the "Life of Mrs. Godolphin," from the pen of the same Author. This circumstance directed fresh attention to the collection of manuscripts still in the possession of his representative, W. J. Evelyn, Esq., M.P., at the family-seat in Surrey, by whose permission the fruit of his literary labours, in a new and most important department, is now, for the first time, given to the world. It is but due to the Publisher to relate, that it was mainly owing to his suggestions that the manuscript was carefully examined; and though, perhaps from its bulk, the grave theological character of
its contents, and the exceeding minuteness of
the writing, it seems to have possessed few
charms for the eyes of those who hitherto have
been permitted to inspect the Wotton manu-
scripts, yet, upon patient investigation, it proved
to be a work of considerable learning and re-
search; and, being partly devoted to the exami-
nation of doctrines then current or opposed, was
thought not ill adapted to a controversial age—
nay, in some measure, calculated to soften the
peculiar prejudices of our times; to lead men to
allow that all catholicity of mind is not Ro-
manism; nor attachment to the pure teaching of
the English Church incompatible with unqua-
lified rejection of Romish error; nor Christian
charity of necessity violated by a calm and fear-
less exhibition and condemnation of the fallacies
of dissent.

To this end, the well-known piety of the
Author, coupled with the trying times in which
he lived, must greatly contribute. Himself a
layman, he is free from suspicion of priestcraft.
His religious attachment to the Church of his
Baptism is no fair-weather conformity in her
sunny hours, but is manifested by firm allegiance in her days of darkness and distress, when he who owned his Spiritual Mother was not exempt from danger of proscription, imprisonment, or even exile. At such a period of her history, John Evelyn, a gentleman of fortune, with many dear ties to warp his judgment astray, showed rare strength and rectitude of principle, in choosing rather, at all hazard, through faith in her Divine mission, to heed the pure light of an obscured and persecuted Church, (unlike some who would desert her in the hour of peril) than to bask with the many in the wild red glare of fanaticism wherewith the land was overspread.

Nor was his fidelity without its reward, so to speak; for he lived to see her restored, if not to the fulness of her rays, at least to her former elevated position, whence she might engage once more, under accumulated difficulties, it is true, in dispelling either the mists of infidelity that followed by re-action the gross hypocrisy of the Interregnum, or the chilling indifference to “things unseen” so largely caught up from the pernicious example of a dissolute Court.
In confirmation of these remarks, we have only to extract a few passages from his Diary of the time. In a foot-note to the title-page of the manuscript, we are informed that this work was "begun in the year 1657, when the Church of England was in persecution;" and about that date are the following entries:—

"3rd August (1656). I went to London to receive the Blessed Sacrament, the first time the Church of England was reduced to a Chamber and Conventicle, so sharp was the persecution. The Parish Churches were filled with sectaries of all sorts, blasphemous and ignorant mechanics usurping the pulpits everywhere."¹

In the following year he writes under date December 25th,

"Christmas-day. I went to London with my wife, to celebrate Christmas-day, Mr. Gunning preaching in Exeter Chapel, on Micah, vii., 3. Sermon ended, as he was giving us the Holy Sacrament, the chapel was surrounded with soldiers, and all the communicants and assembly surprised and kept prisoners by them, some in the house, others carried away. It fell to my share to be confined to a room in the house, where yet I was permitted to dine with the master of it, the Countess of Dorset, Lady Hatton, and some others of quality who invited me. In the afternoon came Colonel Whalley, Goffe, and others, from Whitehall, to examine us one by one; some they

¹ Evelyn's Diary, new edition, vol. i., p. 316.
committed to the Marshal, some to prison. When I came before them, they took my name and abode; examined me why, contrary to the ordinance made that none should any longer observe the superstitious time of the Nativity, (so esteemed by them) I durst offend, and particularly be at Common Prayers, which they told me was but the Mass in English, and particularly pray for Charles Stuart, for which we had no Scripture. I told them we did not pray for Charles Stuart, but for all Christian Kings, Princes, and Governors. They replied, In so doing we prayed for the King of Spain too, who was their enemy and a Papist; with other frivolous and ensnaring questions and much threatening; and, finding no colour to detain me, they dismissed me with much pity of my ignorance. These were men of high flight, and above ordinances, and spake spiteful things of our Lord's Nativity. As we went up to receive the Sacrament, the miscreants held their muskets against us, as if they would have shot us at the Altar, but yet suffering us to finish the office of Communion, as perhaps not having instructions what to do in case they found us in that action.”¹

Again, after the Restoration and the return of the Church of England from her captivity, his mind is so impressed with the overpowering bad example of the Court, and the general corruption that followed thereupon, that he does not hesitate to assign it as the chief cause of those signal

¹ Evelyn’s Diary, new edition, vol. i., p. 323.
visitations, the Great Plague and Fire of London, thus recorded in the Diary:—¹

"October 10 (1666). This day was ordered a general fast through the nation, to humble us on the late dreadful conflagration, added to the plague and war, the most dismal judgments that could be inflicted; but which indeed we highly deserved, for our prodigious ingratitude, burning lusts, dissolute Court, profane and abominable lives; under such dispensations of God's continued favour in restoring Church, Prince, and People, from our late intestine calamities, of which we were altogether unmindful, even to astonishment."

The result of such, or rather similar feelings, was, in 1657, the commencement of the present work, the scope and design whereof, as well as the motives that led to the undertaking, are told most strikingly in the Author's Preface, to which the Reader is especially referred. In the earlier chapter of the First Volume there will be found coincidences of thought, and even expression, with writers who have subsequently handled the same topics; as, for instance, when treating of the moral government of the world, passages occur closely resembling the arguments of Bishop Butler, in his Analogy of Religion, who wrote,

it need hardly be said, in the following century. In arguing, also, from Natural to Revealed Religion, Mr. Evelyn's illustrations are frequently identical with those of the modern Paley. It is not, of course, pretended that such subjects are handled in the same masterly way as by those eminent writers, who concentrated their mental forces upon, perhaps, a single branch of the many topics of this comprehensive Treatise; they are merely alluded to as further evidence, if any were wanted, of the versatility and originality of the Author's intellectual powers. In the Second Volume, wherein he professes to explain the true doctrines of Holy Scripture, and of the Church of England, the chief interest attaching to it will be found to consist in its value as an impartial interpretation of her Articles and Liturgy; conveyed, too, in a manner which shows he was not propounding new views, but merely stating them as understood by her members in his time. The inferences that may be drawn from the perusal of this portion of the work are too palpable to need comment here.

It remains only to give a brief description of
the manuscript itself, in order to explain how far its integrity has been preserved, in preparing it for the press. From the remarkable accuracy of the writing, as well as from portions of the rough draft being found with it, it appears to be a second copy, and by the Author himself, with a view to publication ultimately. This is partly corroborated by the close of his Preface, where, alluding to his "Adversaria," or collection of extracts from different authors (in the previous page termed his "Controversial Chapter"), he says that "they [i.e., the Extracts] were entered promiscuously, and without that care I should have used, had I then designed them for this Treatise, or ever to appear in public."

This "Adversaria," stitched up with the MS., and sufficient to fill a volume in itself, it was not deemed advisable to publish, as forming no integral part of the work, and consisting, with few exceptions, of quotations from authors now in the hands of all. Two extracts, however, have been given in the form of an Appendix, being to all appearance in his own language, and on important topics. After this second copy
was completed, the margin furnishes proof of its revision by the Author himself, correcting even trifling orthographical errors, and, to judge from the different colour of the ink, at different periods of his life. On a separate paper among the Wotton manuscripts the following memorandum certainly occurs—"Things I would write out fair, and reform;" and "A Rational Account of the True Religion, or a History of it, with a packet of Notes belonging to it," forms one of the list. But this probably refers to the fresh ideas, inserted during revision, in the margin, which, doubtless, had it been published in his lifetime, he would have embodied in the work, but, in the hands of another unwilling to do violence to the text, must be suffered to descend into the notes. It appears, also, from the original title-page of the manuscript, that the Author was in doubt about what name he should give it. Εὐσεβεία first, and this is scratched out; next Ὑπερσκεία occurs, after the words "History of Religion." It should be mentioned, also, that lower down on the page he inserts, after the

1 This "packet of notes" cannot be found.
last title, "A Rational Account of the True Religion," the following summary of its contents:

Asserting
The most ancient to be the only True and Best: The Jewish, why, and how changed? Why not that of the Gentile? or Mahometan, but the Christian? Why not any of the Christian Sects, but the Catholic Reformed?
Collected for the
Settling and Establishment of my own Choice.

The remainder is as given in the title-page of these volumes. Thus it will be seen that the integrity of the work has been preserved in all material points, the "Adversaria" alone being omitted, and of course palpable repetitions, not unfrequent, as might be supposed, in a manuscript which seems to have occupied the last thirty years of an active and well-employed life. Occasionally, too, some trifling orthographical errors have been corrected, the very long paragraphs subdivided, and the titles of the sections, where omitted, gathered from the subject and prefixed. At the request of the Publisher, the

1 1657 is the date of its commencement, and 1683 is written on the manuscript as the current year, in order to verify one of the Author's dates, during the progress of the work.
spelling has been changed (it being uncertain, and the work sufficiently abstruse), and a few notes added for the convenience of the general reader, with translations, when not given in substance in the text, for the benefit of those unacquainted with the languages in which the quotations occur; such foreign matter being invariably distinguished from what belongs to the Author by inverted commas and brackets: whence it appears that little has been demanded of the Editor beyond patient transcription of the MS.; while, in order to ensure its integrity, even this labour has been shared by an able amanuensis, Mr. Hook, whose co-operation proved most serviceable, especially in collation, and deciphering passages that would have puzzled any eyes but those well versed in such work.¹

In conclusion, it is earnestly hoped that good may result from presenting these volumes to the world; that His Name may be hallowed whose truth they uphold; and that they may find their way to the hearts of all who give them

¹ A strong magnifying-glass was in constant requisition for the marginal notes.
perusal. And if the spirits of the departed (to speak with all reverence) are at all cognizant of human affairs, we may conceive it not unpleasing to their Author, after a lapse of two centuries, to return, as it were, for a season, unfettered by "the body of this death," to instruct and admonish "them that are alive;" to be instrumental, it may be, with the Divine blessing, in adding fresh numbers to the "great cloud of witnesses, the spirits of just men made perfect" above.

The Editor.

June, 1850.
AUTHOR'S PREFACE.

Living in an age wherein religion, piety, and even common honesty were made to subserve the ends and interests of dominion and ambition, or the advantages of some private party, and by men of all persuasions affecting empire, there was nothing left unattempted to support their avarice and pride. Fundamental laws and establishments being subverted; princes (who should protect them) murdered; the most solemn oaths violated; churches robbed; and the afflictions which the most innocent suffered of spoil, evil, imprisonment, and death itself, cried up as the effects of the zeal of a godly party. Ignorance and enthusiasm, hypocrisy and treason, universally reigning, and that whosoever did not receive this mark in his forehead, and not prostitute himself, soul and body, to propagate the interests of the most sacrilegious and unrighteous acquisitions, (that ever a rebellious and disobedient people maliciously and wantonly un-
dertook) were looked upon as traitors, declared or clandestine enemies to the public weal. That men of all religions (or fancies, rather), Jews, Socinians, Anabaptists, Antinomians, Independents, Quakers, Pagans, and (what is worse) Atheists, and a thousand new sects and denominations, were protected and encouraged under notion of New Lights, Perfectionists, a Godly Party, and persons above ordinances, freely preaching, printing, and promoting their extravagant doctrines, and had advocates to plead for them; that, whilst the waters were troubled, the crafty fishers might cast in their hooks, and satiate themselves with spoil and booty: when I perceived the soberest pretenders countermined one the other for the Supreme Power; that even the very sanctions and laws of Nature as well as of nations were violated; perjury justified and rewarded; Christian churches, and the folds of the true flock, made draught houses, and stables of horses and dens of wild beasts; the "calves" set up, and the hierarchy usurped by every blind leader; Scripture profaned and perverted; the tribunals and seats of justice corrupted; the aged dishonoured; that there were no commandments, no creed, no liturgy, no
baptism, no catechism, no sacraments, no legal marriages, no discipline in the Church; that the schools were interdicted, the universities clouded and threatened; Christian feasts abolished; bishops and priest pronounced Antichristian; in sum, "when there was no king in Israel, but every one did what was right in his own eyes."

And when I saw that for all this everything prospered which these men did, and that any religion was good but the old Christian, which taught men obedience to princes, reverence to antiquity, order and discipline in the Church, frequent communion, orthodox doctrine, according to the undoubted tenor of Sacred Scripture and universal consent of the purest ages; and that all reason and learning was not carnal; nor all decency, superstition; nor all candour, and fidelity, and innocency of life, the effect of moral conscience only, but the power of God, and the result of a gracious education.

When, on the other side, again, I considered that, after God had restored the laws, and brought back the captivity in so stupendous a manner, as next to that of the Jews from Babylon, there is not to be found in history, sacred or profane, a more wonderful deliverance of a
nation in any age; and that, after all these mercies (yea, even miracles) and signal revolutions, people (though with less hypocrisy) grew more ungrateful and impiously atheistical, sensual, revengeful, and not so much as regarding a form of religion; that the princes and great men, who ought to have been examples of virtue to others, were abandoned to all manner of luxury, open and avowed adulteries; the clergy despised, the prelates under, afraid of denouncing against these enormities; the gentry dissolute, theatres profane, the people libertine, and that, indeed, there was no face of sincere religion amongst us: when, I say, I beheld all this, and that in other matters men ascribed so much to nature, senseless matter, craft and force; that, in a word (as the great Apostle expresses it of the heathen),¹ "as they did not like to retain God in their knowledge, God gave them over to a reprobate mind, to do those things which are not convenient, being filled with all unrighteousness, fornication," &c. For all this, to my great sorrow, I was witness of: when, I say, I beheld all this, "my feet were almost gone, my treadings had well nigh slipped," and I began seriously

¹ Rom., i., 28-32. ² Psalm, lxxiii., 2.
to consider some time with myself, whether, in truth, all that which had been taught us concerning God, and religion, and honour, and conscience, were not mere chimeras and impostures contrived by our forefathers, crafty men in their generation, and but now again resumed by as subtle a race as they, to amuse the credulous, superstitious, or less discerning people; whilst the great and polite ones of the world believed nothing at all of it, whose actions had so little affinity with their pretensions, and all that they yet held forth of the greatest and most refined sanctity.

These thoughts put me at last upon a serious resolution of a more accurate and sedulous inquiry, and now no longer to acquiesce in what I had taken in by education, and other general notions concerning religion, which, by many and dangerous errors, I suspected, might be propagated to posterity, and which (the more I sought) I found had not only prevailed with, and perverted wise and learned men, persons of all ages, sexes, and professions, but even whole nations and countries, of which some were wicked and barbarous, as not only do their own histories make out, but the present idolatry, superstition,
fanaticism, and brutishness, which do still obtain in divers parts of the world to this period.

The thing, therefore, which in order hereto I thought myself first concerned to examine, was not with so much expectation of investigating many new arguments of what I was in search, or to divert others with fine disputes and speculations; but so to discipline and reduce the scattered notions and materials which books and discourses, and the reason and moment of the thing, had from time to time furnished me withal (but which had till now lain confusedly about me), into some kind of method; that, upon impartial view of their strength, and summing up their force and evidence, I might judge and determine of the issue, and accordingly consult what party to take, and resolve once for all what course to pursue for the future, and so to settle my fluctuating thoughts, the best and most prudently I could, in the generation I was to serve, and, as far as I was able, not be wanting to myself for the obtaining that felicity we all aspire after, if, at least, any such thing there were;¹

¹ "Si enim post-mortem nihil sumus, prosecto stultissimi est hominis non huic vitae consulere ut sit quam divina et commodis omnibus plena."—Lactantius.
and if not, that I might extricate my spirit from those perplexities, and at once emancipate myself from the doubts and emotions which the belief of an eternal being hereafter, designed to infinite happiness, or doomed to endless and intolerable misery, did continually expose us to; either of which, if I were able to accomplish (by laying education, custom, superstition, parties, and prejudices aside, and dealing clearly and ingenuously with myself), I then concluded I might pass my life with less regret and better resolution for the future, as long as nature and my constitution would suffer me, whatever other circumstances happened, which I was to encounter or conciliate with the best prudence I could, and with this satisfaction to sit down and acquiesce.¹

In pursuance, therefore, of this weighty enterprise, I first set myself to examine what argument seemed with the greatest probability to evince the notion of a Supreme Being: in sum, whether there were indeed any such thing as a God at all! For, when that should be well

¹ Such a design I find mentioned by the learned and eloquent Dr. Sprat, Bishop of Rochester, and to have been reflected on by that incomparable wit and excellent person, Mr. Cowley (whilst he lived), my most worthy friend.
cleared up in the affirmative, whether he took any further cognizance of us, or not, I began soon to be convinced that He was to be adored of His creatures, and served after His own appointment. And, supposing this should yet be uncertain, that nevertheless it was not only reasonable, but the highest prudence to do it; since, if a God, He must needs be just, and do righteously; which, consisting in rewards and punishments to those who deserve them, the living a virtuous and pious life must needs be transcendently preferable to a vicious and disorderly; since, whether there were a Deity or no, it were but what a wise man would choose for the ease and felicity of it: religion being so grave, serious, and so useful a thing, and of so vast importance, that, if it be not true, all mankind have reason to wish it were; and in case there be such a God (besides the baseness and inconvenience of vicious habits here), to hazard His displeasure and appendant deserved misery, and put it to adventure, were madness, and altogether intolerable.

A God, therefore, being found out, His attributes would of necessity follow; and I was next to inquire after what manner He would be
served, what worship and rites He expected; which being once so happy as to attain, my search (I concluded) was at an end, and all that depended upon it; matters of necessary belief being, I supposed, much easier than practice: for it is not the being christened, reckoned a Protestant, or denominated of a party, that will save one, as if it worked as a charm or spell, we know not how, or why, whether minding it or not, but by our improvement and exercise of what we possess; there being no word in the whole Scriptures more certain than that without holiness no one shall see God.

Most will tell us they believe the gospel for a most certain truth, nay, profess they would even die for it, till they meet with something that crosses them, or goes against their interest, and then they secretly hope it is not so. Christ’s death (as one says) seems to serve, not to destroy sin out of the world, but Christianity itself; when the Scripture tells us plainly, that He is become the author of salvation to them only who obey Him, and that He will come in flaming fire to render vengeance on them who obey Him not. What should then induce any one to believe that he shall be saved, whether he believes or serves
Him not? So that a necessity of living well, I saw, was consequent to truth; and this established, what was to be superstructured, I saw, would not be difficult; there being in the world, and especially the Scriptures, and other authentics (the veracity whereof would fall in with my former disquisitions), such plentiful materials, so much light, so clear decisions, so many and pregnant instances, as were sufficient to guide any humble, sober, and rational person, who was not blinded with avarice or ambition, perverted with pleasure and sensuality, impatience, sloth, superstition, or the like prejudices and prepossessions, from which I so earnestly laboured to vindicate and redeem myself; or, if possibly I should not always hit upon the right (holding the foundation), I could not but think, and indeed conclude, that, if there were a God, He must be full of goodness and pity, and therefore pardon all invincible mistakes in searching after truth, when they were not made invincible by our own negligence.

Now, that this might not be my fault, I drew the plan of my designed inquiry as ample and comprehensive as I was able (as will be seen by the many topics I have handled and traced from
divines, philosophers, philologers, historians, and others), to evince the truth of what I was in quest of; and therefore could not avoid repeating what others have done before me on this subject, though not after the same method: and if I have appeared somewhat prolix in asserting the immortality of the soul, it was what I deemed of greatest consequence, and my drift all along; to discuss the nature of that principle, how in man it differs from the animal and sensual, and to give myself a fuller survey of men's opinions concerning that so momentous and abstruse a point; since upon that alone depended the whole stress of this inquiry, and in truth of all we have of precious and worthy our solicitude in this umbratile and transitory passage.

In the mean time, I was glad to find that infamous book, *Tractatus Theologico-Politicus*, so handsomely perstringed; it being certainly the product of an author very far from any sense of religion, and a wretched obstacle to the searchers of holy truth. But he is not alone; we have others nearer home (besides Spinosa, Bruno, Cardan, &c.), deifying the power of matter and the laws of Nature as divine decrees, to invalidate (as much as in them lies) the veneration
of Scripture, upon the pretence of the uncertainty of those oracles, the supernatural inspirations, visions, and favours; and that the prophets and great men of those times might possibly be enthusiasts, or delirious and mistaken, and so, what they deliver down to us doubtful or precarious: in sum, making religion a mere figment, and that (as well as man himself) but an engine, and by discarding all natural justice, goodness, and charity, and resolve it into brutish force.

This, as to the laws of empire, is the language which a man of great name, \(^1\) lately come amongst us, teaches his disciples, and perhaps what these bold heroes would have published, yet in plainer terms, if they durst speak out, who have already debauched and ruined a great many of the volatile and less wary sort. But they are all so abundantly baffled, that none, save the raw and fantastical wits, and those who have read little and thought less of ancient and solid learning, and are disposed to embrace the pleasures of sense and affect singularity, can possibly suffer themselves to be perverted, without being miserably depraved and shattered in their understanding. For the Christian religion, and the base it

\(^1\) Hobbs.
stands upon, seems to me so perspicuous, and their reasonings so false, that there is no merit in believing it. So as none, save those determined Atheists who maliciously shut their eyes to the light, can avoid it.

But the world is now come to that pass, or rather to that profaneness, as to religion, that as it is a reproach not to be called a Christian, so it is a greater to be one. Our beaux and esprits forts make a mockery of the most venerable truths, and deride all piety, to save their reputation. It is enough to have religion in our creed, not in our hearts. In the mean time, there is nothing which these triflers have offered, or the impostors whom they follow, but what the old Heresiarchs and most pestilent of the Atheists have long since broached; as is abundantly seen in Irenæus, Arnobius, St. Augustine (a wit infinitely superior to the most pretending of these), Justin Martyr, Tertullian, &c., and of later times; and since the same poison has diffused itself in this age (as forerunners of great confusion), by the incomparable Grotius, Bishop Andrews, Drs. Hammond, Jackson, Stillingfleet, Barrow, &c., in express treatises and other works of inestimable value, not omitting
those elaborate pieces (printing since the writing hereof) of Drs. Cudworth, Cumberland, Patrick, Parker, &c., and of those abroad, the learned Huetius, Johannes Batalerius, and innumerable others.

It is when one has thoroughly read and well digested the ancient and later writers whom I have named, and who have obtained the suffrages of sixteen hundred years, that one shall be fit to encounter and pronounce concerning these impudent sophisters, who deny matter of fact with so steeled a front: men they are, who, upon pride of their wit, and boldness of speaking things profanely, (in a most abandoned age) are held in estimation amongst those drolls, ignorant and slavish sycophants, who catch at everything that may serve to charm the serpent of natural conscience that is perpetually stinging and lashing their profligate lives and ugly crimes with something which makes vice and sensuality uneasy to them, when they chance to give themselves the seldom leisure of thinking seriously, and as they would wish they had, when they come to die.

But put the case that there were no such thing, at last, as reward for virtue, or punish-
ment for vice, a man shall lose nothing for believing there is; and if there be, the infidel is lost. They do not consider that we are sent into these bodies of ours, and dignified with the intellectual faculty of reason, for trial and probation; that, after all God has done for us, mysteriously, Himself in person, and by his prophets, apostles, and other extraordinary dispensations in all ages, He expects that we should conform to the rules and precepts He has dictated by them, to the end that we may be worthy the life of God, and that immense reward which He has reserved for those obsequious servants of His, reverers of His law and divine economy.

If there were no other proofs in the world, the Scriptures themselves, describing the persons, the non-secular interests of the authors, with the circumstances of their lives, preaching, doctrines, sufferings, and successes, among those learned nations that were in full possession of all other temporal advantages, it were sufficient to vanquish all contradiction. But if for all this they do not think it worth the while—will be wiser than God, and adventure the hazard of a being so perfect, and consummately happy, above all we can imagine desirable to an intellectual creature
—and will put that upon chance for the gratifying of their sense so short a time, especially when all that is required of us is but what a moral wise man would choose, and many Pagans did so, without any such certainty, or prospect of reward and bliss to come: if, I say, men will hazard a possible eternal and happy being for a possible intolerable misery—the satisfactory and inward pleasure of virtue, innocence, purity, beneficence, and dominion over the passions—that sweet serenity and tranquillity of mind, which alone are (even in this life) antepasts of the Heavenly, upon so transitory and uncertain fruition here, pleasures that perish in the using, dying in their hands—I cannot help it.

But, as for my own particular, I will always pray that my soul may not enter into their secret, be they reputed never so great, subtle, learned, and extraordinary in their generation. Nor does this proceed from the prejudices of education: I have been exceedingly diligent (according to my poor talent) to inform myself, and to examine the foundation whereon those have super-structed, who have now stood unshaken as a rock these five thousand years, malgré all the force of men and devils, and will so continue
to the world's end. And had I any thing to bless Heaven for above the rest, (as I have many) it would be verily for this—that I am not in the least temptation to doubt, much less disbelieve, any one article of our most holy truth, for any thing that I have heard or read from any of these magnificent and daring wits, (real fops and confident triflers) and whom I look upon with pity, and as set up by that haughty and imposturous Spirit whom God permits to exercise the sons of men, that those who escape and are approved may be made manifest, and receive an immortal reward.

POSTSCRIPT.

I do here likewise declare freely that I was not able nor solicitous to put this discourse into so new a dress, as that it should not appear how confident I have been to make use of whatever I found to my purpose. On the contrary, I have, without any apology, transcribed whole periods out of several authors, and challenge little to myself but the adjusting and putting my materials into a fresh method and connexion, as might best suit and comply with the design, which was, to settle and satisfy myself; never pretend-
ing to dress it for the public: not that I thought it might not be very profitable as well for others, but for that to render it so would require a great deal of revising and polishing. Call it, therefore, Analecta, or Collections, under certain heads, rather than things digested into that order which both the subject and matter were otherwise highly capable of. In the controversial chapter I have transcribed what in casual reading I thought most apposite; and that without any other method than reference to the table, because they were to be only vouchers and proofs upon occasion; and therefore chiefly applicable to three or four of the later chapters: and to this, besides Holy Scripture, and several of the ancient ecclesiastical doctors and fathers, whom I have purposely read, and with no small industry, from the preaching of our Blessed Saviour and his apostles, down to the fifth and sixth centuries—that is, as far as I had any glimmering of primitive light to direct me—I say, besides these, I have recorded large contributions from later foreigners, and many learned and excellent divines of our own country, such as Bishop Jewel, Pearson, Usher, Bramhall, Laud, Walton, Taylor, Cosin, Lincoln, Drs. Thorndike,
Reynolds, Field, Crackanthorp, Du Moulin, Calvin, Stillingfleet, Chillingworth, &c., and many of our later London divines, and their tracts against Dissenters, Presbyterians, Independents, &c.: nor did I neglect to peruse many histories, treatises, and controversies, published by persons of all persuasions; though I do not always charge the margin with their names, which I acknowledge to be a defect in my adversaria, where I had first entered them promiscuously, without that care I should have used had I then designed them for this treatise, or ever to appear in public.

THE TRUE RELIGION.

CHAPTER I. ¹

WHETHER THERE BE A DEITY AND SUPREME BEING?

THAT THERE IS, PROVED

SECTION I. BY UNIVERSAL SUFFRAGES.
SECTION II. BY THE CREATION OF THE WORLD.
SECTION III. ¹PART I. BY THE SOUL OF MAN.
                ²PART II. BY THE NOVITY OF THE WORLD.
SECTION IV. BY PROVIDENCE AND GOVERNMENT OF THE WORLD.

SECTION I. BY UNIVERSAL SUFFRAGES.

Σύν θεόν.

Although, amongst all the disquisitions and controversies about Religion, this most certainly needs least dispute and probation; everything we see, and everything that moves evincing it,² so as to deny, or indeed

¹ Consult Dr. Tillotson, two first Sermons in his first part, for this Chapter, and the first concerning Atheists.
² See a Discourse of Natural and Revealed Religion in my brother's library at Wotton, sold at the 3 Pigeons, Inner Temple Gate.
so much as to question it, reproaches as well our common sense as our reason; yet, forasmuch as some such monsters there have been and yet are (at least, if one may estimate by their lives and morals), in these last and dregs of times, I conceive it not amiss for me to remove that rubbish, and at once to clear my way, by calling to mind, and putting into method, some of those irrefragable, though common arguments, produced for proof.

Of the contents of this chapter, upon which the subsequent Discourse is to be established—

The existence of a Deity is so much an innate and fundamental principle, that not only Holy Scripture makes it out, but all the wise and sober men in the world, Heathens and others, at all times and in all places, have taken it for granted. And therefore Moses, without any further preamble, commences the sacred story of the Creation, peremptorily and positively, as an undeniable effect of the Prime Cause, making not the least doubt of the Author. And so we rightly begin our Christian Symbol, "I believe in God, the Father Almighty, Maker of Heaven and Earth," &c., as an indisputable notion, woven into the very contexture and constitution of our Being, putting all argumentation to silence. For, is it reasonable to imagine, that Nature should put any false impressions into us repugnant to those original principles she has so universally established, namely, an irreluctant and free assent to such truths as are the continual objects of our senses, as that two and two make four, that the whole is greater than
the part, &c.? There are as certain and immutable truths in Morality as in Geometry and quantity, and were so even before there was any creature to consider and examine them. For some conclusions are of themselves so perspicuous and evident as to need no ratiocination to induce our assent, even at first sight and hearing only—I say, divers moral and intellectual truths, and principles so connatural to us, as admit of no contradiction. Everybody agrees that there is in our very nature sentiments of right and wrong; to do as we would be done by; to revere our parents; to be grateful to our benefactors; to clothe our bodies, and the like. And there are secret and indelible perceptions of Immortality, and of rewards and punishments hereafter, and a conscience of guilt or inward satisfaction waiting on all our actions. And these innate notions are not the effects of education only; but antecedent, and connected with the very constitution of our souls, and evincing something extraordinary, and are the same among all mankind, whose understandings are entire.

There is that within every one of us which sometimes raises doubts, puts the question, thinks and reasons, and certainly knows she does so (be it Mind, Soul, Reason, or whatever principle), which is irresistibly obliged to assent to those eternal verities as incontestable; and there is a True and a False, a Just and Unjust in all things and to all beings, and (maugre all our Hobbists), that which is true and untrue in respect of Man is so both to angels and to God himself.

And so, in like manner, are the relations of perfec-
tion between ideas, immutable and fixed as the laws of the Medes and Persians. For, granting that Education be of wonderful force to make one man differ from another, and has a real influence upon whole nations as well as upon particular persons, it never yet so far prevailed as to call in question the propositions we have mentioned, and several more of the like kind, among which that of the being of some first, which had nothing previous to it, is undeniable.

Every art and science, language and fashion, suffers alteration in tract of time; but the existence of a Supreme Being has never yet been questioned by men in their senses, or suffered the least revolution. It is still the same in all times, at distances, amongst all nations, civilized or savage; none so brutish and barbarous as to deny the existence of some God.¹ The want and indigence of innumerable other things and conveniences of life many people and nations have sustained; but never do we read of any, who were utterly without something they feared and worshipped, though it were but a red clout, an onion, or head of garlick; which shows the nature of our mind to be of such a frame as, by the ordinary exercise of the faculties, it determines here.

Nor could the great and wise Creator possibly so far abandon the creature (which above all He had enriched with a capacity of knowing and serving Him,) as to

¹ Cic., lib. i., De Leg., et cl. 11. To the same purpose, and almost in the same words, "Nulla gens adeo extra leges moresque projecta, ut non aliquos Deos colat."—Seneca.
leave him without any seminal principle or inclination, that might conduct him to the spring and fountain of his being.

* Let any one reason and give himself time to think, and trace emergent consequences, be the rivulet never so small, it will, after all its meanders, bring him to the source from whence it flows; and thus, whether upwards or downwards, beginning at ourselves, we take hold of the chain by either link, we shall at last find one of the extremes fastened to Jupiter’s chain.²

Let us look into the Gentile world so many ages past, or among the Heathens at this present day—of innumerable instances to produce a few. The most ancient of all philosophers, Hermes, in Egypt, (who doubtless received it from the Hebrews) uses almost the very words of Moses. Plato the Academic,³ and prince of the Peripatetics, Aristotle,⁴ tells us that God, or Mind, was author of all, even of Nature herself; and particularly in his Treatise De Mirabilibus, brings that instance of the Ocean’s menacing an universal Deluge,

¹ That is, Reason exerting her faculties in due time, as seed thrown into the ground, though making no appearance at first.

² Noverim me, noverim Te (S. Bernard).

"Did I know myself, I should know Thee."

³ In Timæo.

⁴ Metaphys. I know what has been objected to Aristotle; but the imputation is so unjust, whilst he plainly has recourse to the First Mover, and the Τὸ Πᾶν in his Metaphysics, and where in his other Books of Nature he speaks of the Eternal, Immortal Prime Cause, as shows it to be an aspersion; not to add what he has said in his Book De Mundo; if that piece be his.
by reason of its height above the Earth, were it not restrained by some superior power. *Zeno* and the stoics, nay, the most sensual and supine of all, Epicurus, unites in this central truth. To this agree Theophrastus, Stobæus, Varro, Cicero, Seneca,¹ Plutarch in passages innumerable, and, above all, the incomparable Epictetus. Join to these the ingenuous confession and contemplation of Galen,² who was no bigot. And if Epicurus and his poet ³ suppose the Supreme Being exempt from the solicitudes of sublunary things, he no where denies His existence, or if he any where seems to doubt of it, what should we expect from one that lived and died a madman! So true is that of the orator: "*Esse Deos qui negat, vix eum sanæ mentis existimem.*"⁴ Agreeable to that of holy David's,

"The fool hath said in his heart."

So naturally do all wise men and sober agree on this topic of whatever Religion they are.

From the philosophers turn we to the poets, who were of old their divines and prophets. How frequent are their raptures, invocations, and sentences to our purpose! Witness their Orpheus, the most ancient: Hesiod, Homer, Menander, &c., of the Greeks;⁵ Virgil, Ovid, Lucan, &c., of the Latins, describing the crea-

---

³ Lucret. 9.
⁴ "The man, who denies that there is a God, I can scarce account in his senses."
⁵ Phoeylides, Sophocles, Euripides.
tion of the world and the formation of man. Nay, the very loosest of the comedians, tragedians, satirists among the Latins, universally speaking of the Deity with all reverence; accusing and scourging the impieties of an evil age by their pious instructions, sentences, and encomiums of virtue.

So general was the consent of Pagans as to this article of a Deity, who made and governed the world, that rather than be thought to have none, or fearing they might miss of the true one, they embraced multitudes, and took in all animals and inanimate things—stones, plants, trees, rivers; they had *Dii nobiles*, and *majorum gentium*, and others innumerable, over all things, places, passions, yea, and diseases. There were other commentitious deities; not as so many divine or distinct substances, but manifestations, and several notions of one divine power. For, otherwise, so various were they, that Plato said he knew not what to call *Venus*—whether goddess or not: for she is sometimes taken for Pleasure, otherwhiles for Divine Love, Beauty, Sensuality, Fecundity: and the several operations of their *optimus maximus* were attributed to Vulcan, Bacchus, Ceres, &c. And besides the sun and moon, they admitted all the constellations, the elements, all things in Nature, and inventors of every art: and, lest there should any slip from them, they captivated the very images of the countries which they subdued;¹ for so the Romans; whilst the Greeks worshipped² "the Un-

¹ See Jeremiah, xliii., 12.  
² Acts, xvii., 23.
known God," lest any of the rest should take it ill, and think themselves neglected.

But not to insist on what the heathen acknowledge, even the devils themselves believe and tremble, and are forced to confess Him, not only in our Scriptures, those oracles of the true God, but (to the confusion of his own dominion and false worship) from his own tripod, and the many idol-temples, where he had so long blinded and deluded the world. The images and shrines they adored; the altars they erected; their superstitious rites, ceremonies, and sacrifices, were manifest proofs of their devotion to some superior that could do them good and evil, seeing it was not to the statues they addressed their prayers and paid this honour (as St. Augustine\(^1\) makes plain by several instances) as to what they represented. Nor were they themselves so stupidly ignorant, to think the stone or metal was otherwise a god, than the fig-tree stump was Mercury.

Another undeniable mark is their oaths, execrations, appeals, and prayers; whence Zeno truly infers that, however an Atheist passes his life, his prayers (being in pain, and ready to die) confute his impious professions, and the signal judgments usually befalling them. Examples of this were the catastrophes of Diagoras, Protagoras, and Julian of old,\(^2\) Vaninus,\(^3\) and some

THE TRUE RELIGION.

(but very few) others of later times, who may be accorded as prodigies in nature, *phenomena* rarely appearing, seldom met with in history, and to be looked upon as monsters rather than men. But of this more, when we come to speak of natural religion.

Doubts and mistakes proceed not so much from the things or objects themselves, as from their not being rightly proposed to our understanding, in regard of the many prejudices which arise from things external, that pervert and vitiate the truth. And when we fancy that immense world of fire, the sun, to be no bigger than it to us appears—that a square tower at a distance is round—that parallel lines extended beyond our ken touch at the extremes, and the like—I say, it is through some such hallucination that all our doubtful inquiries concerning the existence of a Deity proceed, and not from any general or natural principle, but such solitary ones as are plainly erroneous and sophisticate—education, power, interest, passion, example, imagination, eloquence, and whatsoever other circumstances bear any false colours or reasonings.

There have been (among some of these) who pretend the being of a Deity to have been the invention of cunning politicians, to intimidate men, and reduce them to discipline and obedience, for the better government of the world. But this is very foolish. Not Numa nor Lycurgus could have persuaded the people to embrace the belief of the being of a just God with any success, had they not been before inclined to it already; since
it was the creed long before we read of any legislator (Moses excepted) or governor in the world: and sundry barbarous nations do yet believe and adore a God, who have hardly any notion of reward or punishment. And to acknowledge such deities as the Heathen did, was rather pernicious to government than advantage; and, therefore, whoever of these pseudo-politicians persuaded men there were any gods, on that account, they could not form nor create any such notion, without supposing it already in every man by nature. Wherefore, neither did Moses himself ever suppose it necessary to inculcate that belief into the people of Israel, as concluding it impossible for any rational man to believe the contrary.

We have affirmed, and 'tis evident, that all we behold above us and beneath us, all we touch, and contemplate round about us, point to the Supreme author. And supposing (but not granting) that what we are obliged to believe from those objects were not the objects of our common senses, yet may it be as certain as that which is; seeing there are innumerable things certain as to their existence, the natures of which are incapable of explanation.

We feel, and are affected with pain—we smell, and are sensible of odours, annoyed with such as are noisome and fetid—we are delighted with harmonious, displeased with harsh and discordant sounds, and the like of all other objects of the tactile senses; whilst we cannot explicate how these different sensations are made, or by what contrivance in the organ. It is abundantly
evident that we have proofs irrefragable, and which need not any so deep and philosophical researches. The Genesis of the world, and stupendous works of the creation—the Providence, government, and maintenance of this mighty machine, the structure of our own bodies and reason, and the deductions she must of necessity make from these particulars, proclaim it aloud to all mankind; and there needs no other demonstration.

God (says Seneca) is all we see and all we see not; for, whether there be any other middle-natures besides those inanimate, sensitive, animal, rational, or more intellectual and metaphysical beings, which both daily experience and history discover to us, is not so evident indeed to our senses, as highly probable to our reason, and conformable to the analogy of nature.

It were strange that those vast and numerous regions and bodies above us should be desert and devoid of inhabitants; whilst we find nothing so contemptible here beneath in the lower world but what is full of life and motion; from the elephant, whale, and eagle, in the earth, water, air, to the most minute and despicable insect that crawls. Nor doubt I but as the inferior, so the superior continents may be furnished with living, and (for aught we know) intelligent creatures and species, annexing the elementary world to the celestial and ethereal, even through all the illustrious orders of the heavenly hierarchy, as by a chain and series of causes, to the cause of causes itself.

Thus the little stream and smallest brook hastens to
the more ample river through innumerable meanders, the river takes its way to the seas—thus the branch to the stem, the stem to the root, and that to its first and seminal rudiment. The being of mankind had thus its first origin, with retrospect from ancestor to ancestor, till we arrive at the first man from whom they sprung. Now, though it be necessary and absolutely essential that his Creator be without beginning, as he is infinite and without ending: 'tis not so of the world or man, as we shall show:

To continue this chase, there is, we find, a first and last in everything in nature, nay, in imagination also, whether we will argue from the succession of men, or the peopling of countries, the production and nativity of plants, foundation of empires, edification of cities, and other artificial works; seeing there were in all these a first father, a first colony, a first seed, first sovereign, first stone, a first hand which laid that stone, and superstructed or framed the engine.

And thus, by a familiar instance, the hammer is raised by a wheel, that wheel by a consequence of other wheels; those are moved by a spring, pendule, or poise, which first gives motion to the first wheel, and, lastly, is that spring wound or drawn up by some hand which was the prime and original agent; actuated by nerves, those nerves invigoured with spirits, originated in the brain, prompted by the fancy, the understanding will, and other faculties of the soul, by a first and immediate mover, of itself inmoveable from anything extrinsecal, before or above it, in time or power—
namely, that intelligence which moves and directs the
great clock of the universe.

Thus, what has no beginning must be eternal, and
that which is eternal was always the same it is, and
ever shall be; for were anything precedent to it,
it were the thing we seek. But, seeing something must
be first, that thing or Being must be God: nor may
mankind or any being be deprived of that Being, but
by some superior and more puissant Being or motion;
nor can it annihilate its being of itself, unless by some
being greater than itself, and it were absurd to suppose
it otherwise, and would involve us in the same circle.

SECTION II. BY THE CREATION.

The stupendous machine of the universe, which
God unfolded in his creature, is another inference so
convincing of the existence of a Deity, as that Zam-
blicus will have the simple contemplation of it, a very
beholding of God Himself with our eyes, and touching
Him with our hands; not as fancying it to be the real
God we are speaking of, as some imagined, since, if so,
the world, and what we see, must have been eternal,
and made itself (which is absurd, and what we shall
refute) but for its being composed and framed with
such admirable skill, wisdom, order, and magnificence,
as takes off all pretence of doubting, and is so palpable
an argument, that St. Paul (preaching to the Gentiles)
thinks it sufficient to convince the learned Athenians,¹

and no less knowing Romans,\(^1\) where he tells them that God has evidently demonstrated it to them, "being understood by the things that are made, even his eternal power and Godhead." And thus Heraclius shows to Hermadorus how the world, in its structure and ornament, gave testimony of a Deity. And those, who did less consider it, did yet grope after it, and could not devise how so goodly a structure should be raised, without something to move the materials, and dispose them into that wondrous order; and therefore introducing a certain divine mind, they held it to pervade the universe, from whose activity all effects were first produced.

As for those lazy philosophers, who left all to chance and atoms, they are rather objects of derision, than worthy of dispute: for Epicurus, with all his fortunate encounters and coalitions, is driven to suppose strange hooks, figures, and claws, to make his system hang together, and preserve his world from endless change. For that there should be a constant and uniform specification, males and females, in such proportion, and not every moment jumble into new and anomalous ones, is not easy to conceive, without allowing the component principles to have either sense or quality, nor letting us know whence their motions do proceed. But that, though they were the originals of all, themselves had none; and so make them gods, whilst he denies there be any, at least such as are at all concerned with things of this nature.

And upon this substruction does the late Des Cartes

\(^1\) Rom., i., 19, 20.
raise his renowned edifice, making, by the mutual attri-
tions of his atoms, the globular ones to compose the
celestial bodies, and their chips, or filings, as it were,
to be the materia subtilis diffused through the universe,
filling up the chinks and interstices, and giving motion
and action, not only to the animal kingdom, (which he
will have but dead and senseless engines) but to all
things else in nature. He will have God contribute
nothing more to the creation of the world, than the
whirling of innumerable vortices, globes, and striate
particles; from whose casual motions (according to cer-
tain catholic and universal laws of matter) there pro-
ceed all animates and inanimates whatsoever, without
the conduct of any understanding Being, Wisdom, or
Providence.¹

Let us suppose the production of mankind from his
atoms. How principles of life and sense should emerge,
without a vital nature, and a virtue of attracting to
itself a substance proper to frame the Individuum, is
altogether inconceivable, seeing it must of necessity
contain likewise the faculty of that formative act, by
which the matter is moulded, and made conform to its
specific nature. And, finally, it must have all the same
powers and energies of the rational soul, as our late

¹ Similarly the Hylo-zoists held every atom of matter to be
endowed with a plastic, spermatic life; and though unconscious,
yet capable of producing all things; nay, and to improve them
into animality and sense, yea, reason and understanding, without
need of any incorporeal substance. Epicurus and Democritus,
who made the world but Ἐν τῆς ὕβετος, an egg of one night, did
not allow any such thing as incorporeal, but space.
grave and learned Hales\textsuperscript{1} has elaborately made out, examining the opinions of our wild philosophers, who state the original of things either \textit{ab aeterno}, or indeed any other cause, save the pleasure of a wise and omnipotent Being.

Did ever any see a picture representing a history, in which divers actions and persons were judiciously designed, placed, and coloured; the lights, shades, perspectives, and other circumstances of that curious art exactly observed, such as we see to be the works of Raphael, Titian, &c., and not believe some such skilful artist had managed the pencil? Was it likely the Iliad of Homer, the commentaries of J. Cæsar, or the vaster works of Livy, Plutarch, or Cicero, were composed by the fortuitous jumbling together of a printer's box of letters? The world is a poem—the most perfect and consummate piece that ever was made; and did no more happen by chance than stones do dig themselves out of the quarry, not only squared and adjusted to every part and ornament of a regular building, but, according to the rules of architecture, form themselves into the five orders, and dance into a palace at the sound of the harp. Nor do trees hew themselves into beams, boards, and wainscot; nor tiles pin and lay themselves upon the rafters; nor does glass blow itself into panels, and with other materials, which require art to bring them into use, erect themselves into houses, churches, and whole cities, with all their various furniture; nor do ships grow equipped with all

\textsuperscript{1} Origin of Mankind.
their tackle and apparel, rigged and ready to sail; nor find we clocks and watches, with all their subtile wheels, and curious springs and motions, in the mines of brass and iron, without the labour and excogitation of an intelligent artist. And if we acknowledge that every house, ship, and watch, so fitted and completely finished, was the work of some man, shall we not much more conclude that this far more exact system of the Universe (so admirably contrived beyond all that the art of man can boast of skill and cunning), was made by some Omnipotent and infinitely wise Agent? But so our modern wits, who never yet so much as saw one atom or grain of dust start up into being out of nothing, will have them to frame the world, and, without patience to consider wit, or honesty, persist in this madness, and think thereby to ridicule all Religion as well as sense and reason. But as the wise man has noted: "So vain are all men by nature, who are ignorant of God, and cannot (or rather, will not), out of the good things that are seen, know Him that is, neither by considering the works, acknowledge the work-master. For by the greatness and beauty of the Creature, proportionably the Maker of them is seen."¹

Of how depraved a sense must needs one be to think that Chance was the producer of intellectual substances, and devised so many beautiful and useful inventions, and gave them an understanding to effect that which Chance itself could not, namely, impart that power and faculty to another it never was possessed of! No, this

¹ Wisd. xiii. 1-5.
noble and illustrious work, cemented in its various parts, and cast into the system we behold it, was doubtless limited and determined to the forms assumed. Nor could its component matter form and actuate itself without some impulse and impression separate from its matter. If self-motion be essential to matter, it must of necessity have been coeval, and in it ab acterno, which is not possible. For, if there be no atom in repose but what naturally is in motion, then the principles of Epicurus are corruptible, because divisible. If of no parts and indivisible, then have they no extension, and if no extension no power to form anything, much less to make a world.

Moreover, does matter move? Then it takes up place, and consequently has parts, figure being a determined superficial. Again, if motion result from the principles of matter, how comes this motion (infinite and variable as it is) to be determined to such a form, such order, and in so regular a method and economy, for so many ages, without relapsing into chaos and confusion; seeing there is no natural or essential necessity that either matter should at all exist, move, or determine itself to such particular form, but by some casual encounter or superior directing cause? The first is childishly ridiculous, for chance is either nothing or something created. If something created, then had it a beginning; if none, then must it be something distinct from matter, eternal, and self-existent; and so is what we contend for, namely, the First Cause, which is God, the Cause of Causes. But, if Chance be nothing save
a name—vox et pratera nihil—how monstrously absurd were it to affirm that nothing created something, nay, all that ever was created! whereas, if there had ever been nothing, nothing could ever have been. Something, therefore, must be which never was made, namely, selforiginated1 and eternal.

That, in the mean time, God, who is something, nay, who is all things, created all things out of nothing, implies no contradiction, though to us inexplicable, ex nihilo nil, excluding no supernatural production, but natural generation only. Theophrastus doubted not of this, and Seneca acknowledged a Chaos, so did Linus, Hesiod, and even the very Indians, as did the Egyptians long before, something of a sluggish, pre-existent matter, which was held from the consideration of things artificial, that supposes something out of which all things were made.

But, from the weakness and imbecility of the creature, to argue the same of the Omnipotent, were to betray a greater weakness in us, and want of reason. When, therefore, it is affirmed that nothing produces nothing, we must conceive it of natural causes, raised out of our experience of successive generations, which indeed must necessarily have some being before the things arising from them had being. For though, since that time, all plants have sprung from their seeds, and animals from their parents, &c.; yet was there doubtless a plant which bore and produced that seed, and parents to beget that offspring. Hence the opinion that the whole Universe

1'Αντρόφος.
was at first but one great egg, of which the shell was the vast expanse, the air the white, and the earth its yoke. And some affirmed it of an oval form also, and made it symbolical of the world,¹ as may be gathered from the Phœnician philosophy, Plutarch,² Macrobius, Proclus, and the Platonists, agreeable to the incubation of an indulgent Spirit, which some of them gave hints of. We shall not trouble ourselves with that impertinent question, which was the first, the egg, or the chick (as some have done); but this we find, that God created every plant of the ground in its full vigour and perfection, prolific and ready to yield increase, and so the fowls before we hear of any disclosure of the eggs. The womb of animals also was made before a child was born; and sundry things, as Heaven, Earth, Angels, and Souls, and elemental bodies, were the immediate production of Almighty God, as other things mediately from things pre-created, namely, out of the Earth and Waters, as birds, beasts, fishes, and plants, and even man himself.

In the mean time, 'tis as hard to conceive how matter (or anything out of which anything is made) should rise and result out of itself, as out of nothing, and altogether incomprehensible that senseless materials should be their own architectresses to the degree of furnishing such a world of things as are daily the objects of our senses. I say, this is a strain of wit so extravagant, and, in plain terms, so impossible, that, should it once be

¹ Plut. In Sympos, i. 2.
² Plut. In Sympos., l. 4. Macrob., l. 7, c. 16.
seriously embraced, would not only bring to ground all our mechanical philosophers, but all that we have been taught of good sense and religion.

That God made all things from nothing is yet certainly true, and even demonstrably so, or else there can be no such Being as God. For, if there be such a thing, then of necessity there must be that principle, which created the first thing; and, if He did not make the first thing, then there is something besides Him, and which never was made; and, if so, then there are two first or two Eternal Beings.

Wherefore, if God formed the first thing, he formed it of nothing. One, then, of these propositions must be true: either nothing was before something existent, or was not. If it were (though but one single moment), then was there never anything, or ever could be since; because nothing could produce nothing; and, to produce itself before it was, is not only absurd, but impossible. Therefore, of necessity, something had an actual existence from all eternity; self-subsisting and giving being, immediately or mediatly, to all subordinate beings. And this independent Being is only necessary; all the rest contingent and at his pleasure.

On the other side, ascribe we all to Nature, and mean not the God of nature, is to split on the same rock. Nature, therefore, (in the large sense) is that which comprehends the entire virtue of all finite beings, subordinated to the first of Beings, and which, according to the ordinary course, are regulated by certain constant and uniform laws; and so the course of nature
is no other than the will and pleasure of the God of nature. Indeed, God does not do all things in nature immediately; but governs the motion of matter to the form designed, whilst that matter does not understand the reason of what it does, nor for what end, being wholly guided to that by a mental and wise causality. Things, then, have their primogenital being from the supernatural power of God, who imprinted on them all their specific ideal signatures and animal efficacies; so ordered, and setting in motion second causes, as to bring together apt materials for the composition of the several species. And, when once they are in this method of existence, they afterwards move and act according to the nature and course of life and progress, minted and stamped upon them in their first creation.

This is nature, nor has she any further hand or intent in any of those operations ascribed to her; and, in this sense, we may safely have recourse to, and speak of second causes without reproach; since they are but the Almighty’s instruments, ordinary and natural Providences—unless where things and effects are so very extraordinary, as the wisest and most considering persons cannot sound and discern the reason, or are otherwise altogether stupendous, just as miraculous works, and things supernaturally happening; while our atheistical devotees to Dame Nature (though what they pretend be with the greatest violence imaginable to all reason, experience, and indeed to the very laws and sanctions of nature) think it, forsooth, beneath their wit and high-flown reach to acknowledge any other
efficient than what is the object of their senses, and form their conclusions accordingly of all things else.

Once more, then, nature (in a more restrained sense, and as she more nearly concerns our enquiries) may be said to be the power and capacity of matter, as that power (we said) is conducted by the same steady and constant ordinance by which she acts and disposes of it, Matter being, of itself, as to any interior principle, stupid, immoveable, and uncertain, till agitated by some superior virtue exterior to it. And this philosophers call motion, and is that which, dividing this stupid and heavy lump, does also figure and modify all that we with so much worthy admiration contemplate in this aspectable world; and which, without this mover, had still remained substantial matter and bulk indeed, and in capacity of being moved by another; but never thus diversified for beauty and usefulness, and might as well have been a deformed and rugged rock.

But, supposing that matter were endued with any necessary motion, yet being without mind, purpose, thought, or counsel: though that motion might possibly have separated the mass, it could never have produced any useful figure, regular and organic species, with those several and admirable accommodations, with all the train of subordinate circumstances, and orderly effects of necessity belonging to them.

Moreover, this unexcogitated division would also have been illimited, and never left crumbling and mouldering away; having nothing to hinder, nothing to maintain it. Wherefore that motion which has given
this impulse to matter, and brought it to this beautiful and firm contexture, is (whether we will or not), that prime, superior, and noble cause, the Father of Nature, Matter, and Motion; the Omnipotent central Being of Beings.

Nor was it other than God's goodness and free benevolence, which was the cause of what He has wrought; no intrinsic necessity, no, not of doing the good He continually does, and daily pours upon His work. For though his own nature be the most benign, the emanations and exercises of it, as to His creatures, are directed by His own free will and favour; seeing otherwise He could make nothing worse or better. Indeed, there be who will have Him to be a necessary cause, and yet a voluntary, and that He does always what is best, because it is of His perfection to do so, namely, to communicate of His bounty to something without Him, from the eternal beneficence of His nature. But this is inconsistent with the necessity they pretend; seeing necessary agents have no more power at any time to suspend their activity, than fire to burn and heat. To imagine, therefore, this of God, were to deprive Him of understanding and the exercise of His power, wisdom, and will, which alone created all, and can do all things.

Thus have we examined the invalidity of that precarious fancy, that unthinking matter should fall by chance, or act necessarily (when once in motion) into this orderly figure; or that it should retain any innate perfection, beside a bulky magnitude, much less an
infinite perfection, such as eternity and all those other divine attributes, incommunicable and needful for the work of creation. We have likewise showed the work of nature to be the work of reason, not of created nature; that without diversity, separation, and union of parts, nothing can be made, and that this separation being the effect of motion, and not competent to matter of itself, does of necessity require some hand or power to actuate it. It is likewise evident, that no part could produce the whole: that the world could not make itself; that without sense, excogitation, and purpose, things so orderly contrived could never have been created; and that, therefore, this principle is something extrinsical, and nothing from within common matter. Lastly, that nothing is or can be eternal, but in the idea of the Almighty: and that to make matter produce itself is to make that God which is no God, but to Atheists and impious men without God in the world.

But we now descend to particulars. The contemplation of this vast and goodly machine, how loudly it bespeaks us in the language of the Royal Prophet, the "glory of God and His handy-work." Behold here a demonstration, O, Atheist! if nothing save daily miracles will convince thee, here thou hast to entertain thy infidel curiosity.

Whether it be the position, course, or order of the sun, or other luminaries' motion, or that of the earth; or the

1 Psalm xix.
2 See "Dr. Taylor's Consideration of Man."
sweet influences of the Pleiades, Orion and his sons, or other refulgent constellations, which give light, growth, and vigour to all the lower world, and (for aught we know) to ten thousand more above us;—their order, progress, immense magnitude, distance, and inconceivable spaces, comprehending perhaps many million of greater bodies, and likely habitations and continents, serving to the Almighty's vast design,—are the astonishing wonders, which proclaim that nothing but an infinitely wise and all-powerful agent could raise a machine so useful, glorious, and immense. Nor is it possible that all those glorious and infinite number of distant globes should have nothing in them to praise their omnipotent Maker; since Christ has said that in His Father's House are many mansions, who framed the world to communicate his own infinite beneficence, and that there might be other Beings happy with Him: "O Israel, how great is the house of God, and how large is the place of his possession!" ¹

Who without amazement can consider the self-poising earth, and the other celestial bodies we look upon, without other prop to sustain them in the liquid air, or more subtile ether? Contemplate we the periodical returns of the equinoxes and solstices—the just distance of the sun—the interposition of atmosphere, qualifying and attempering the fiery emanations of that burning ocean, to a just and benign warmth, for the comfort and production of those innumerable species, to which it imparts growth, maturity, and life; in a word, the universal

¹ Baruch, iii. 24.
benefit of the elementary world! Behold, next, his oblique motion, whereby he visits every part and region, by which the grosser exhalations are meteorized, circulated, and condensed into clouds, and sustained by the atmosphere; both to shadow and refresh the weary ground, descending in fruitful showers, softening and impregnating the teeming earth! The snow, hail, ice, and frosts, subdue and mellow the stubborn clods, keeping the native warmth within from dissipation, whose virtue else would soon be exhausted by the perpetually burning planet! Then behold the sun in the firmament and centre of the heavens; the subterranean fires in the bosom and centre of the earth, to prepare and concoct the mineral juices, and other concretes for useful metals, gems, and other precious substances, stones, shells, and colours: qualifying also the waters for nutriment, medicinal drinks, and salutary baths, and a thousand other purposes; whilst the seasons, not passing from one extreme to the other, but sweetly, and by imperceptible degrees, slide as it were from winter to spring, from spring to summer, from thence to harvest and fruitful autumn, in a wonderful economy; and by a no less admirable Providence all things are preserved, which else would have been inverted, disturbed, and lost; since things so contrary could never have met to make up this harmony and perfection.

The restless ebbing and flowing of the seas, observing the course of the lunar phases; their enigmatical currents, fluxes, and reciprocations; and how they were contrived to irrigate and refresh all the parts of the
earth, in rivers and larger streams; made to serpent in meandering crooks, not only to check their rapid course, but kindly to visit the most inland parts; and are fitted for navigation and commerce of distant nations. The havens too, and creeks, and bending shores and bays, are stations for ships, impelled by various winds. These not only ventilate the air, and stir the water from unwholesome stagnations, and give motion to mills and other useful engines, but help the bold mariner to plough the vast and liquid main, and bring him to the haven where he would be. And when the storm arises, and the proud waves swell, the shores are a curb to their fury. *Thus far shalt thou come, and no farther.* But who can number the sands of the sea? He, only, to whom earth and sea are as a drop of the bucket, and the dust of the balance. "For the sea is His, and He made it, and His hands prepared the dry land."¹ "All sheep and oxen, yea, and the beasts of the field, the fowls of the air, and the fishes of the sea, and whatsoever passeth through the paths of the seas;"² innumerable for multitude, stupendous for shape and magnitude, and incomparable for use and benefit. Thus every place is garnished and furnished; nor has God made anything in vain; nothing is defective, nothing superfluous.

Take we next a prospect of the earth's surface, and behold from the lofty mountains how the humble valleys are clothed with verdure, goodly trees, and variety of plants and flowers. These serve for building, fuel,

¹ Psalm xcv., 5. ² Psalm viii., 7, 8.
fruit, and medicine, and for the sustenance of those who cultivate them. Consider but the rudiment of a tall and umbrageous tree, from so minute a seed as may be borne away by every blast, or carried to the hold of an insect less than itself, increasing to so immense a stature as a hundred oxen cannot move. The shady boughs, verdant leaves, useful timber, delicious juices, wholesome fruits. Then turn your eyes to the enamelled grass, and read God on every flower: see and admire their uniformity, beauty, colour, variety, perfume, virtue, which who could give them, but an infinitely wise and glorious Being? Is it possible to contemplate the single production of one of these, without astonishment and hymns of praise? Whilst the head and root of all this flowery beauty is hid and buried in squalid mud, enduring all the severities of weather, and even emerging out of rottenness into that ravishing variety of shape, tincture, odour, qualities, and operations! The cocoa alone is a miraculous instance, fitted for all human uses, meat, drink, clothing, shelter, and a thousand other conveniences!

Who but the Physician of Souls were able to enumerate the virtues and effects of the vegetable kingdom? The various sorts of apples, pears, cherries, apricots, peaches, nectarines, plums, grapes, and smaller berries; the orange, lemon, fig, granate, melon, sugar-cane; and all these even in one alone, the royal pine—a compendium of all that is delicious to the taste and smell. That from so weak, despicable, and useless stem as what supports the vine, planted among the
rocks and pumices, such variety of delicious and tempting juices should flow! corn to strengthen, and wine to comfort the heart of man, and oil to make him a cheerful countenance! Behold the odoriferous cedar, the tall fir, and spreading oak, the shady plane, the upright and victorious palm, the beautiful cypress; and among the more humble shrubs, the myrtles, jasmines, laurels, honeysuckles, healing balms, and sensitive plants, &c.

Walk then a turn into the flowery parterres of roses, lilies, tulips, anemones, amaranths, frittillarias, gentianellas, hepaticas, and carnations; together with the aromatic spikes, thymes, &c.; all these, and thousands more, dressed, figured, fringed, folded, miniated and decked by the hand of Him who made the heavens; nor was Solomon, in all his glory, clad like one of these.

Demand, next, of the beasts of the field, and even they shall teach thee—the fowls of the air, and they shall instruct thee—and the fishes of the sea, they shall declare unto thee, Who knoweth not in all these that the hand of the Lord hath wrought this? 1 The whale, which God has made to take his pastime in the vast ocean, among innumerable spawns, producing that variety of fishes and crooked serpents: who can consider the crustaceous kinds—the lobster, armed cap-à-pie, crabs, tortoise, in their fortress-shells, without admiration! The beaver, crocodile, and hippopotamus, are amphibious: the behemoth, rhinoceros, docile elephant, the useful horse, camel, dromedary, for speedy carriage

1 Job, xii., ix.
and courage: the painful, strong, and patient ox, for labour; the fleece-bearing sheep; cows for milk; goats, deer, and other cattle, upon a thousand hills.

In deserts lurks the spotted leopard, the swift tiger, indomitable panther, bears, wolves, and foxes; and those most in the colder climates, affording furs and skins. The wild boar is in the forest; the squirrels on the trees; the faithful and watchful dog, domestic; the mimicking apes divert us; and above all these, for strength, are the lions, seeking their meat of God; and so do the young ravens that call upon Him; the towering eagles, hawks, and birds of prey; the loquacious parrot, the sagacious crane, pious stork, architectress swallow, chaste dove, warbling nightingale, glorious peacock, thrushes, linnets, canaries, and other singing birds, their wonderful notes, nidifications, trains, and plumage.

These, and infinite more, are fed with flesh, grain, fruits, flies, of which latter there is stupendous variety, for shape, colour, and contrivance: consider but the strength of the minutest gnat, piercing with his invisible dart the thickest skin, and drawing blood through his proboscis; hear his trumpet, sounding from so small a pipe: for him lies in wait the subtle spider, displaying her nets for the surprise. From the wise serpent to the crawling worm, they are all endowed with wonderful instincts, to propagate, defend, and preserve themselves: nor is there among them the least mite or peper-worm, (that dust of a creature, whereof fifty thousand are contained in one drop) but is for food to
some other creature; and we extract antidotes out of vipers, and sanative remedies from the poisonous cantharides.

What shall we say of the monarchical bee, and the dulcet elixir she so industriously gathers and stives in her admirably contrived and waxen city; the government of her numerous subjects: or, again, the order and economy of the little ant, to which Solomon sends the sluggard? Can we look on the laborious silkworm, from an egg no bigger than a grain of sand, through all its wonderful changes, life, death, sepulchre, and resurrection, without astonishment! how, with her tender web, she clothes the proudest potentate, and without whose spoils the height of their glory would be but from the common fleece, which covers the beggar as warm as the king! The murex yields us purple, and a despicable worm the scarlet, which gives reverence to princes. It were endless and plainly impossible to continue the recension through remote countries and the New World, or to take an account of every creature that came into the ark of Noah. Millions there are we hardly take notice of, and some so small, as to elude the most accurate microscope. All things are full of life; and the least of these framed with admirable proportion, fitted to their several natures and distinct organs. Thus are seen through the mirror of Creation the magnalia of God in His smallest works. All things, as the wise man says, are double one against another, and He has made nothing imperfect, but one thing for the good of another; and who shall be filled with be-
holding His glory? \footnote{Ecclus., xlii., 24, 25.} In sum, we may speak much, and yet come short: wherefore He is All.

But there are yet greater things than these; for we have seen but a few of His works, till we have seen and considered Man, the last, though not the least, of the Creation: the Almighty proceeding still to more perfection, and because he designed a place and habitation richly furnished for him that was to be the image and bear the character of his glorious Maker, and to raise his admiration to contemplate and delight in the bounty of his gracious Benefactor.

Consider we, first, the structure of his body, upright stature, majesty, charming countenance, ravishing eyes, and variety of features. Let us search within his head for the seat of his superior faculties. That so fluid and unlikely a substance, placed in the several cells, should pretend to the residence of his sense, reason, memory, imagination; and be the shop and magazine of those wonderful ideas. The velocity of the motion, which carries its mandate over the rest of the body, even to the most distant members, in a moment of time; and retaining so many different notions of things, figures, persons, places, and be able to reposite and draw forth for use and in order; and then to express his mind by articulate sounds and eloquent speech, for society, conversation, and the praise of his Maker; and all these faculties contained in so small a fortress as the head, is plainly miraculous.

Let us consider how these several senses, sent out by
the soul to speculate abroad, report what they find, by
the central touches and perceptive notices darted from
every atom, and the surface of various objects, on the
exquisitely fine, innumerable, and universally dispersed
nerves and membranes that invest them; whose root is
in the brain, where (as we said) all our conceptions are
forged, our appetites and passions excited and regulated.

Look into the fabric of the eye only, for an
instance of the rest of the sensitive organs. The hu-
mours and tunicles are transparent, to let in colours,
and therefore tinctured with none themselves. The
parts of the eye convex, to let in the many rays pro-
ceeding from one point of the object to the bottom of
the eye. Then has the uvea a muscular power, to con-
tract and dilate that perforation in it called the pupil,
thereby moderating the transmission of light. Then
is the inside of the uvea black, that the rays, falling on
the retina, may not, by rebounding on the uvea, re-
vert on the retina again, and so, by repercussion, con-
found the light. Then follows the tunica arachnoides,
enveloping the crystalline, by help of the ciliary processes,
to thrust forward or draw back the useful part of the
organ, as the vicinity or distance of the object requires.
Lastly, the tunica velina is made purely white, the
better to receive the species, as black letters are better
distinguished on white paper. We might proceed to de-
scribe the wonderful effects and contrivances of the
several muscles which direct its several motions; the
quick motion of the eyelids, to preserve them from
injury: and, after the same manner, how the tactile,
auditory, and olfactory senses, and that of the taste, are excogitated: but, to speak a little of each, would require a volume, not a chapter.

We cannot yet pass by the hand, that instrument so indetermined to any operation, and universally useful, but we will suspend it till we come to speak of Providence, which will be another topic of conviction to our atheist. Innumerable are the uses of this organon organorum,¹ as the philosopher calls it.

And verily we must acknowledge it altogether stupendous, and superior to what any other creature can pretend to. He calls it (and that rightly) not one, but all instruments, and is in a kind of rapt and admiration at the curious mechanism of the fingers,² adapted to so many intricate conveniences. And in earnest, when we consider the wonderful motions of the spine and several vertebrae of the human skeleton, composed of so many integrals, among the joints and bones, the irri-guous and meandering veins, their sluices, valves, &c. The pulse of arteries, conjugation of nerves, divaricated into so infinite a number of capillary vessels, so wisely and copiously disposed for the perception of the most delicate touch! When we contemplate how the chyle is made into blood; the blood accended, circulated, refined, spiritualized, distributed, assimilated, and copiously diffused; when one reflects on the perpetual vibrations of the heart, moving so many years; the functions of the liver, spleen, gall, kidneys, and other

² Lact. De Opif. Dei., c. 10.
intestine cleansers: or examine the connexion of the joints, and their numberless flexures; that at the least six hundred several muscles belong to our bodies, on which attend ten distinct intentions (namely, to each so many) amounting in the total to six thousand various purposes and ends to be considered; and that of the bones to be of a hundred thousand; to say no more of the minuter contextures of all those other parts of the body, with what curious stamina and threads the whole is woven and knit together, we cannot be to seek for a demonstration that there went something more than chance, or ordinary power, to the framing of so beautiful, so useful, so admirable a creature.

We have said nothing of the astonishing contrivance of other parts; how the teeth are ordained, some to cut, others to grind the meat, and fit it for the stomach, after the tongue and palate have passed their censure; nor how it is there concocted and transmitted into the viscera, and by what mysterious actions and various ferments it is drawn and distributed, for the supply of blood, spirits, and other juices and humours necessary to preserve the body: whilst the lungs maintain a perpetual stream of breath and air, to temper and refrigerate the heart—that shop of life, which maintains that intercourse with the brain, and, through the recurrent nerves, gives motion to the muscular system, in obedience to the dictates of the mind.

Who is able to trace the stupendous circulation of the blood, its perpetual flux and reflux, both to carry that elaborated and noble juice to the most distant vessels,
and to preserve it from stagnation? But, above all, the miraculous economy of the several offices serving for propagation, and that, from such unlikely rudiments, the species should be continued, and endowed with faculties, vegetable, sensitive, rational, so stupendously united; and with innate sentiments, improvable to the perfecting of a rational life. How this embrion is irradiated, how nourished, produced, and perfected, is a subject of contemplation that can enter nowhere but in the highest wisdom, and a Providence altogether divine. Well might Galen,¹ then, have raised that noble thought on this so noble a work, as indeed he has; and, therefore, Justin Martyr tells us that, in his time, even among the heathen, there was an express hymn in use, to celebrate in particular the creation of man; accounting religion and true piety not to consist in sacrifices, hecatombs, and costly incense; but in recognition and declaration of God's infinite power and beneficence in adorning the world with such a goodly creature, and making such great variety, without envying good to anything capable of His bounty. And on this account it is, that Maximus Tyrius exhorts men to contemplate God, and lifting up our minds to penetrate even beyond the visible heavens to the Invisible Deity.

Man, therefore, thus formed, endowed, and accomplished, was not made by chance, and to grovel only here; nor sprung he up from the exuberance of pregnant earth betwixt the tropics, now effete, and spent with bearing; nor, as mice and insects, from the slime

¹ De usu part.
of Nilus; which yet never anybody has seen. For who should give the tender and senseless babe the breast, and cherish the new-born infant? These are visions of poets, and the dreams of idle men. In a word, therefore, man, framed by angelic hands, erect of posture, fit to act and command, in the bloom and vigour of youth, of goodly stature, exact proportion, with quick and sparkling eyes, judicious brow, floating tresses, every feature, every motion composed and graceful, has all that the earth, air, and water can produce, to delight and serve him. The various shape of beasts, the charming notes of birds, the several sorts of fish sporting in their liquid element, the beauty of flowers, the diapered and enamelled meads, verdant grass, delicious fruits, shady trees. The resplendent sun, the orders of stars, the meandering rivers, crystal streams, the cooling frosts, the surprising heights of the rising mountains, the luxurious valleys, rocks sparkling with gems and veins of richest ore; and all these without labour but what is agreeable to his nature, and the entertainment of his contemplation. For He made us, and all these things, and not we ourselves; we are the work of His hands.

O happy sovereign, then, whose empire once was the whole world; whose palace was the spacious earth, whose canopy was the starry heavens, whose vassals were all the creatures;¹ whose food was paradisian; clothing, innocence; conversation, angels; whose law was refined reason, without passion, without fear, want,

¹ Sen. De Ben., l. iv., c. 5.
sickness, or death itself; from what happiness dost thou fall again, when thou deniest to acknowledge who it was that made thee, and gave thee all these things? What, what is man that Thou art mindful of him? Thou madest him a little lower than the angels, to crown him with glory and worship! O Lord, our Governor, how excellent is Thy name in all the world! For thus the Almighty, to demonstrate His power, educed light out of darkness; raised the most noble of His creatures from the basest matter; that in all this height he might be humble here; and gave him reason, and an immortal soul, to exalt him again hereafter (for as man, without this principle, and, after all we have said, is but a beast), that neither of them should sink too low in this animal condition; that both may look up, and be assured of a more glorious state (pursuing the paths of virtue), He has distinguished him with a prerogative that sets a good man next his Maker.

To conclude, man has eyes given him, not only to see, but contemplate the astonishing fabric of the universe; and a tongue to proclaim the praise of its Creator, and understanding to comprehend His works; so as mankind seems made on purpose for His worship, and to be a curious and diligent observer of them, and speak his glory, and, in particular, his obligations to Him above all other creatures of sense without these noble faculties. This was, doubtless, the end of our being, and of all those perfections which distinguish us from them. Such active and boundless passions were
not designed to mean employments only; besides that no other creature was made capable of religion; nor is it imaginable that God would create a world, and place no creature in it, whose proper business should be to know, adore, and contemplate his wise and bountiful benefactor. Man, therefore, is the priest of nature, to offer up the praises and acknowledgments of the whole creation. Not that He (who is alone most happy in the contemplation of His own perfections) needs any accession from anything He has made, or any service we can return Him; though it be an end, not unworthy, to render His beneficence and works conspicuous, and receive the deserved honour of them from His creatures. But, seeing that none of these (man excepted) have any sense, either of their own excellency, or from whom they received what they have; as destitute of that intellectual principle which should direct them; God has ordained man (for whose use and benefit He has, in a more especial manner, designed them) to perform that duty for them which they could not of themselves; and ennobled him with those faculties, that he might be capable of and participate in fruitions commensurate to his nature. And, verily, this consideration should make us careful that we destroy not that which He has designed to a state so excellent; embase or dedecorate that transcendant principle which has placed us above the rest of His creation; namely, the intellectual soul, which comes next to be examined.
SECTION III.—PART I.

BY THE SOUL OF MAN.

The soul, not the animal life which he has in common with the brutes, and is no other than a certain subtile and active flame, giving life, motion, and vigour to the whole body,—but the rational soul, I say, is the man. And the disquisition and belief of this is of that importance, and so convincing a demonstration of the Deity, that, though virtue herself were reward and encouragement sufficient for one to embrace a pious and religious life, it is absolutely necessary we should be grounded in the truth of this particular, that so we may, with more seriousness, provide for its future being and eternal state. Forasmuch as the body, or vessel, which, for a while, contains it, is but of frail and perishing matter; and it is for the sake of this other precious particle and substance only, that has obliged us to the search of all that is designed in this treatise. For irrational creatures in this are happy, that they glorify their Maker by performing those natural functions which instinct prompts them to, nor are they capable of any other.

But man, being an intellectual agent, is endowed with more sublime and noble objects; that act of understanding and volition, which is united to that fabric of man's body we have been describing. It is then by this that sensible, as well as altogether intellectual objects and mental notions, are reposited in the
memory, through such tracts of time and variety of accidents, without dissipation or confusion. And hence we may contemplate how the exercise of sense is performed in the brain, or by the soul, through the mediation of the spirits. How also visible objects are transmitted through those obscure passages between the organs and cerebel, or in what other parts of the brain it is more eminently seated. This is that spark of life, extending and communicating its virtue equally, even to the utmost confines of the animal nature, with the same facility in the most enormous whale and largest elephant, as in the minutest fly and mite. With how much more ease, then, does God, who is all Spirit, and the Father of Spirits, govern and actuate the universe; which, as a living but elemental body, would soon dissolve and turn to corruption (were that great soul to be absent but one moment), and perhaps be annihilated!

But we have hitherto spoken of animal life only; and, as we communicate with other living creatures, composed of flesh and blood, and in man alone connected with a sublimer substance, wholly separate from matter. Indeed, there are who wish and hope the soul were no other; and, to this end, use all the witty arguments their love of what is present is able to suggest. For, should the soul happen to survive, and, after all their labours, prove a more lasting and immaterial substance than the body and vital spirit, it would disturb them with the doubts, which not only our preachers, but philosophers of old, have constantly asserted, that some just deity, being the author
of it, will inquire hereafter how it has behaved itself, and treat it accordingly. And this apprehension of a future being not only introduces the necessity of a God, and the retribution we mention, but engages these men of pleasure to be serious, and reform their sensual lives, which, rather than they will part with, they adventure all. To establish this opinion, therefore (namely, that the human soul is nothing but refined matter), Satan, the enemy of mankind, has, both of old and now again more vigorously of late, raised up a sect, whom he has furnished with subtle arguments to maintain a thesis (were it possible) which would subvert all piety and religion in the world. This then it is, which we shall endeavour to oppose, as of the greatest importance in the world.

That the human soul should consist of matter is altogether incomprehensible. Since (as all consent) it acts not without motion, and that motion to be irregular and uncertain, how is it possible it of itself should produce a thought, or any such thing as reflection, without some exterior principle productive of the thought, while they affirm matter to be insensible, its motion variable, contingent, and changing figure to effects, that have no manner of conformity to thought? Now, if this giddy and inconstant motion be not able to produce a thought, neither can its effects. If motion of matter produce the cause of Thought, or reasoning, that cause must proceed from Motion, or else there can be none. Thought is, then, the immediate effect of motion; whilst motion produces no effect, but to range, sort, and dis-
pose matter, without immediately producing the least reflection. Besides, it is not simple matter that acts when we think; since, though its parts may act on one another, they cannot upon themselves, and reflect as thought does, and may do, to infinity.

There is, then, something in man distinct from matter, with all her motions, and which has some other source; nor can that be, but from God. For the simple existence of matter never could have produced a world, with all that admirable furniture we have described; or organized the most despicable mite, that crawls, without some exterior paramount principle to manage and direct its motion.

We find, then, in the world, an existent matter, moving in such sort, and in some portion of this matter; a thinking principle, not only able to reflect upon itself, but conceive things more sublime, even of spirits, and things abstracted, and which has infinite ideas, without being the results of mere matter, but something more transcendent. Add to this, that matter cannot be essentially self-existent; forasmuch as all beings must exist, either from their own existence, or some exterior principle, or, thirdly, from the perfection of their own nature. Now, the perfect existence of matter neither proves that it always had, or shall perpetuate, the same existence: seeing those moments of being have neither any natural or actual connexion by which it may subsist. If it be replied that every thing exists as it is a being, it is answered that, as nothing or no-existence, it has no being; because in effect it is nothing: whereas the
mind, or soul, be it substance or accident, is at least a being. Men believe not she always was or shall continue, because they look on it as matter, and its motion only; when yet it always might be, even by that principle. Whereas, thought, which adds something to this motion and matter, has not always been; and therefore a being, though it now exist, may not always have so been.

Nothing, as was said, has no existence, because it is nothing, and, being a simple negation, needs not anything that it may not exist. Whereas, a Being which is positively something, exists not, but as the principle of its being subsists; which yet is not the universal quality of a being, as is evident from beings which do not always exist, but either from an efficient cause which has given it being, or from the emanation of his perfection who has exempted it from needing any thing at all. For it is not from the eminency of its own perfections that matter necessarily exists; seeing it is so remote from those perfections, that it has hardly any; but remains, as it were, rasa tabula, deriving all its qualities (which yet are but mixed ones) or sensations rather, from the mind than from any motion at all of matter.

We find thought indeed in some portions of matter, as it becomes perfectly organic; but then it proceeds not from mere matter; seeing whatever is in matter must either be essential to it, or accidental and acquired. Now, to think is not essential to matter, seeing all matter has no thought, nor any does acquire. For then she must have it of herself or from some other. If from
another, then it is another principle which imparts it, and that is God. If from herself, it must proceed from rest or motion: from rest it cannot be, for rest does nothing, being a cessation of all action. Nor is it from motion that matter thinks, what it did not think before; there being in motion only these four things: firstly, the thing moved; secondly, the term from whence it moves; thirdly, the place whither moved; fourthly, who or what the mover is: none of all which is thought. For were thought the result from the motion of matter, then must thought be itself that motion, or its effect; and it is not a simple motion only: forasmuch as thought, doubt, reflection, &c., is no simple transport, or motus a quo, ad quem. Nor is it an effect of motion, since that being but the transport a loco ad locum produces no other immediate effect than the situation of the thing moved; and if several mobiles move at the same instant, they all would encounter when they separated, fall into and produce a new order. Now, thought is neither any new situation of any body, or sensible atom, nor any new series of several atoms, greater or smaller bodies, sensible or insensible.

Moreover, did matter produce thought, it must either be from the virtue and power of motion in general, or the differences of motions, or the thing moved, or exterior differences. Now it is not from the sole power of motion, or motion in general, or as a motion producing an effect, which can create a thought; inasmuch as there are an infinity of bodies, which move without thought. Nor is it the difference of motion; because
that is diversified by slowness, swiftness, and determination. Now, since *rapidity* is but a quicker transport, and *determination* but the motion of a body inclining to one side rather than to another, it is not possible those differences should bring forth thought. Nor, finally, is it the difference of place whence it rises, or whither it tends, or by which the matter passes, which produces thought, where there was none before, because that is extrinsic to the subject, which then does alter itself and thinks.

Again, were thought from motion of matter, it must spring from the motion of one or more atoms; if from one, whence comes it to pass, that one has more than another? If of more particles, then every atom or particle has its share of thought; and so thought becomes divisible, and mensurable according to their numbers, which is extremely absurd. In general, indeed, it may be affirmed, of all qualities and modes of matter, that they retain an essential property of being mensurable and divisible. For motion has its degrees and measures, and figure may be divided and measured; but so cannot thought; for no one can say, without impropriety, half or three-quarters of a thought.

Moreover, did thought result from motion of matter, it would be a thinking, intelligent principle, which is equally vain to suppose. Nay, motion of matter would be knowledge itself; which were as extravagant. In a word, the effect cannot be nobler than the cause by which it subsists. Now, plain it is, that thought is incomparably more noble than the motion of matter.
Besides, one may know, by induction of effects, that they hold some proportion with the cause; whereas, we find no sort of proportion between motion and thought. Add to this, that the motion of the atoms of matter are limited, and can extend but to such a term. Nor can the particles of our bodies, so abiding, ascend and mount the skies, and range the universe, penetrate the centre of the abyss,—matter and motion acting only upon things present,—while thought is able to perform all this in a moment,—nothing limits, nothing bounds it.

Thought, then, can by no means be the result of motion of matter; nor consequently the soul, of which thought is only a faculty, and no material thing. Moreover, motion cannot represent all things and beings to our contemplations as the soul can do. Finally, if the simple motion and matter produce no thought, it is wholly inconceivable how the existence of matter in such a place, or near another body, should produce this effect. Now, so it is, that motion only assigns place for matter, nearer or farther from the other body; thought, therefore, rises not from motion of matter.

If, then, these two principles subsist, that matter acts by motion only, and thought results not from it, it must follow, that thought has some other principle; and, consequently, that there are intellectual beings, spiritual and immaterial, namely, God, and the spirits, and the souls He has created.

Moreover, it is proved, that it is not in the power of matter to cause the least obstruction by the mutual jostling of atoms against atom, since it hits no degree,
or so much as part of any being, body, or substance, but the entire atom; and only that individual one it strikes against. But thus it is not of the soul or thinking principle, which separates only by metaphysical degrees, and is able to contemplate a thing, as a being abstractedly, stripped of all substance or body. Nay, and to represent it as a body, without so much as conceiving it an atom; we having notions of things that have no mathematical dimensions or affections of bodies, such as thought, virtue, vice, &c., in which there is nothing at all of mathematical extension or magnitudes. It is internal energy, not any local motion, capable to act and penetrate any extended substance, and to co-exist with it.

It is in the capacity of the soul that we see and comprehend almost infinite things; the dimensions of bodies, the beauty of colours, the difference of taste, odour of perfumes, harmony of music, pain and pleasure, without the substance or presence of the objects, by these mere ideas. Then our memories furnish maxims, principles, conclusions, and all sensible and intellectual beings, though never so remote and absent. Now, what corporeal substance, plunged in matter, could present us with such subtile instruments, for the forming a work so incomparable, but that Supreme Being, who has endowed the soul with those perfections, even that cause more noble than the effect?

Add again to all this, those acts of reflection abstracted from matter, and of which it is totally incapable, namely, the ideas of God in all their perfections, and
other notions not obnoxious to sense. And, then, the infinite and insatiable thirst of our souls after knowledge and the love of good; its restless passion after something more perfect than what she can find here in any condition whatsoever, &c., of which more hereafter, when we shall have occasion to speak of its immortality, and to prosecute this material-inmaterial subject, as we have done here its existence; and as the form of man, differing him from other animals, and exalting him above them; all of them asserting the being of a Deity, which was to be proved in this chapter.

But the union of the soul with the body is now another argument of this Divine power, namely, the so reciprocal connexion betwixt an intellectual substance and organized matter: substances and essences, though totally unlike and independent; and yet that to be so apprehensive of pain, upon the least division or violence on matter. For, how should local motion beget a thought, seeing motion only produces motion? for, should it pretend to more, the effect would exceed the cause. This union is, therefore, from no law or necessity of nature, but from some supernatural establishment of a Divine Author.

To this might be superadded the unaccountable effects of miracles, inspirations, oracles, apparitions, magical feats, and the extraordinary operations of sorcerers, so universally attested, not only by the Jews, but by Christians, and innumerable witnesses. Finally, by the more metaphysical and abstracted arguments, the reflections of a serious man, enquiring how himself came
into being, since he made not himself, (no effect being possible without a cause), nor can continue or preserve himself a moment, or foretel the future. Wherefore, these things, and the like, must of necessity flow from some Superior Cause and more excellent Being than himself; and, if so, then is there a being besides him, of infinite power; and if, from any limited or subordinate being, that being derived its existence from a being self-essential, which is the thing in question. Believe we but once, that the wisdom, understanding, and other noble and rational faculties of man were the result of matter only, and we may conclude the same of the wisdom and power of God himself, notwithstanding all those mighty works of wonder we have enumerated in the Creation; since, in respect to us at least, intellect, wisdom, reason, &c., is more noble than the mere naked character and marks of them are, for his operations are no other. If it be replied, How vast a difference there is between those faculties in man and those in God! 'Tis true. But who knows not that, besides the understanding, wisdom, &c., which we find to be formally in the soul, we also there meet with the same characters of the Creator's wisdom conspicuous in the Universe; and that the subordinateness of the parts of Nature is not more astonishing than the subordinateness of thought and affections in the soul? Did the least understanding spring from the motion of matter, so may the greatest, seeing the motion of matter seems to have no more relation with the least than with the greatest and most perfect understanding. One of the most convincing
arguments, therefore, proving the existence of a Deity, is, that matter we see immovable, as to any power or virtue of beginning its own motion, and that it has neither degree nor determination of motion. Wherefore, we conclude, upon solid and irrefragable grounds, that something superior and extrinsical to matter gives, regulates, and directs its motion, and has determined it into this admirable fabric of the aspectable universe. So, as it were plainly madness, so much as but to imagine that matter should think of itself, or have anything to do in the composition of the human soul; or that, in case it had, it should not have motion and determination of that motion; motion being but a mode of matter, and so consequently thought; and, as was said, the same matter to produce understanding and those other Divine faculties, which, how visionary and absurd, has abundantly been evinced. And thus we have likewise proved that life and sense could never be the result of stark and senseless matter, much less cogitation, reflection, and the power of comprehending eternal verities, &c., from magnitude, figure, size, motion, or any other mixtures and combinations of elements and qualities.

We have likewise made out that the human soul is a substance specifically distinct from body, of parts inseparable, subtile, and capable of penetrating bodies; that she is self-active, having an internal energy, distinct from local motion; but whether totally unextended, otherwise than as a body, may be doubtful philosophy, and is no point of faith, but reason. For, were not the soul in every part, part of it must, which cannot be
predicated of a substance that has no parts, and were to
divide an indivisible thing.

Lastly, as to atoms, as they are the workmanship of
Almighty God, they give indeed a more probable reason
of a world of considerable effects of Nature, above all
other principles. But that atoms, with all their re-
nowned advantages, or happy concourses, should of
themselves produce a thought, life, or reason, is madness
to affirm; so immensely disproportionate are the opera-
tions of the soul to that of matter. Mankind, by virtue
of a far superior and more sagacious principle than
matter, can pretend to great things; and is eternally
thinking, contriving, recollecting, comparing, changing,
resolving, providing, and the like, in a rational series,
which inconstant matter, however supplied, never can do.
Did matter contend with matter, what confusion would
it produce? whilst the mind and soul of man sedate the
hostility, and bring it to due obedience, as being a power
abstracted, a distinct and immaterial principle. Hence
it is able to comprehend abstracted notions, the mathe-
matical point, infinitesimal divisibility, and other geo-
metrical affections, stripped both of body and sense.
Her knowledge is progressive, producing consequences
from premises, and things precedent, even to demon-

1 All the mechanic motions, percolations, subliming, and elabo-
ration of the efflorescent hyle, or matter, be it never so subtile
and quintessential, is still (we say) but matter, and to matter must
return, and to drowsy senselessness: for how sensation and percep-
tion (nay, reason, reflection, yea, and immortality itself,) should
result from the posture, figure, and motion of mere magnitude, is
incomprehensible.
stration. Add to this, the soul's notions of moral virtue, metaphysical theology, stable and eternal truths, wholly strange to matter, as are all the immediate emergent motions of our mind, thought, and reason; which, having no progression from matter, are things that are produced, and can subsist without it, and which we better comprehend than we do our very bodies, of which the rational soul has little cognizance.

The soul knows not how nature and matter works, either in the framing or nutrition of the body, and therefore pretends not to intermeddle with it. But, when, through any exorbitancy, or violent inclination from some sensual object, it is disordered, the soul then exerts her power, and can curb, deny, consent, determine, as she pleases, which shows her to be distinct from matter, and also her despotic sovereignty and empire over it, and that she owns no superior but God alone. For that which corrects and controls sense must be above it; and though sense never be deceived as to its own affections and faculties within itself, (provided it be not vitiated) yet can it not judge or reason of the external object, which may be vastly disproportionate to the organ; we should not, therefore, wholly consult our senses when we speculate truth, but call our reason to assist us, who, in conjunction, never err.

In the mean time, the soul, as seated more conspicuously in the brain, does, by the originated Neurology, give intercourse to the animal spirits, and by the muscles produce corporeal motion, as they alternately communicate their passions to the soul, where they are imme-
diately sensated. How yet the soul, thus incorporeal, is united to the body, is the mystery? We find that she takes cognizance of all considerable impressions, and that by a wonderful providence, lest the body, dull and inactive of itself, should fail of necessaries to sustain it. But what this nexus is, this intermediate, through which her virtue is derived into the body, must, for aught we know, remain a secret as long as soul and body dwell together here, nor is it less a paradox how they should come to know each other better when asunder than when together, and so near.

In a word, this soul of ours is a perennial source of perpetual motion to something yet to come, and more than all this world contains, furnished as is described. Since, though he had all the wealth, youth, strength, beauty, learning, and perfection it can afford him, and were he never so calm, sedate, and assured, within and without, of a future well-being; yet would all be too narrow for his large and immense desires, which somewhere else have an adequate object, as all things here are provided with. It is indeed acknowledged that we cannot form a proximate idea of anything which is not body in this mortal and bodily state of ours, so twisted and entangled with our corporeal senses. But this does not prove that, therefore, there really is nothing besides body and matter; there being so many things of which we have no positive ideas, which yet forces us to acknowledge and believe that they have real beings somewhere. The Epicureans themselves confess they have no positive idea of their atoms, being so minute as
not to be capable of falling under their most accurate senses, notwithstanding they rationally conclude they are. But though we cannot positively say what that principle in our rational operation is, by way of definition, we can what it is not, namely, that it has no proportion or relation to mere matter, but something (as we have already proved) superior to it.

The operations of man differ from those of brutes, even from the more perfection of principles; albeit, even in the operations of brutes, there may perhaps be something of more perfect than body and matter only. But these men, because they had the advantage of other sects in being able to explain many most considerable effects of nature, by local motion and disposition of matter only, with more ease and probability than others of less mechanical heads, would impose upon the world, that by the same principles they could unfold all the phenomena of nature, and whatever else concerns the being and operations of the human soul. Whilst we have plainly made appear how absurd it were that sensible should spring from insensible without a powerful aid of something highly sensible and intelligent.

No, we must not pretend to explain the nature of the principles of our reasoning faculties; nor play the geometrician with our soul, as we may with lines and figures, and things obnoxious to our senses, in this umbratile state and dependence:

Invida præclusit speciem natura videndi;¹

¹ Lucretius, lib. i., 321.
but have recourse to a higher idea of ourselves than to make our souls (that precious substance by which we are distinguished from the beasts that perish) of that base alloy. Let us resolve it to be infinitely more noble and perfect; and that, though we cannot exactly tell what we are, we certainly know we are far from that they would persuade us we be—mire and dust, inactive and unthinking stuff, such as they will wish themselves.

SECTION III.—PART II.

BY THE NOVITY OF THE WORLD.

The novity of the world,¹ and that it had a beginning, is another proof of a Deity, and his being author and maker of it. Nor does it, by any authentic records, appear to have begun much sooner than Moses has set it down. Aristotle, indeed, seems to fancy the world co-eternal with its cause, as light is from the sun—by a necessary, not voluntary production. And Plato's argument was, that, it being the most perfect, first, and best of His works, He would never destroy it. But, had it been eternal, it must then have been the first, and so, of necessity, God himself; and, doubtless, in all this tract of time, been more and sooner peopled. Whereas, we find it many ages and periods ere the western and northern parts were at all inhabited, or brought to any culture. Nor is it possible that busy

¹ See Macrobius Somn. Scip., lib. ii., cap. x.
mankind should have lived so very long without better houses and conveniences of life; or passed so many thousand thousand years without books, buildings, navigation, and other useful arts; the fathers and inventors of all which, with their progress, perfection, and decay, are transmitted to us.¹

Seneca tells us, that, even in his time, there were almost none of the sciences which could derive their pedigree above one thousand years; nor any history or chronology beyond a certain epoch. We know of none more ancient than Moses or Job,² (whom some conceive the elder), nor any heathen writer before Homer, Hesiod, Herodotus, and some other Greek poets. And Lucretius ingenuously confesses, that before the Trojan war there was nothing worth knowledge delivered by any author worthy credit; which, with the like arguments of the late invention of arts and forms of government, he makes use of to assert the novity of the world.

For, as to laws and legislators, they began in the paternal, and continued to families; and as they increased into tribes and clans, to colonies and migrations; as people and kindred combined into societies for mutual

¹ After all the wonderful things pretended to have been invented by the Chinese so many thousand years beyond our chronologies, those who have made the latest and best discoveries of those people, and most accurately examined things upon the place, can really find nothing exceeding the universal flood.

² Some have affirmed Job to have been one of Esau's sons, and the friends who came to condole, petty kings.
defence and assistance. And then men lived meanly, in huts, and ambulatory tents; the father of a family being both the prince and priest, that function being still preserved in the primogeniture, as long, at least, as they lived before the promulgation of the Mosaic law; and till they erected tyrannies and kingdoms, and built cities and fortresses, as they grew opulent and haughty; when they also raised enormous structures, pyramids, and temples; and vice and rapine breaking them in divisions, made them choose captains and guardians to conduct them; and judges to do right, when better settled; and, since that could not be amongst them without force and power, they came in time to submit to kings and princes, at first, perhaps, of choice and by compact, or right of conquest, which grew to empire and arbitrary dominion. Thus, from private families, and inter-community of goods, as they separated and dwelt at distances, they used exchange and permutation; thence to money, weights, and measures, merchandize, and traffic; from iron to brass, gold and silver, or whatever was most precious and apt for their commerce and ease.

As to sciences, the Greeks knew nothing of philosophy before Pythagoras; Socrates was the first who gave them any relish of it. Thales first taught them astronomy, who learned from the Egyptians—they from the Chaldeans; but it never arrived to the perfection it now is at. As for medicine, Hippocrates gave them rules, and began to methodize what before was comprehend in a few scattered receipts among empirics
and silly women. *Laws*, from the code of Justitian, to that of Theodosius; his from the twelve famous tables, compiled from those of Greece; theirs from Solon and Lycurgus, and his from Egypt. Truly, the world was thought to be so young a creature, that Macrobius did not compute its age to be above two thousand years before his time, and that very rationally, from the paucity of books and good histories, which should have informed us; so as, from the creation to the incarnation, all our Christian chronologies, even at the widest distance, agree within forty years of one another.

Touching *cataclysms* and universal inundations, they could not possibly arise by any natural means; and if through supernatural, it proves what is contended for. And, besides, that of Noah’s only excepted, such as we read of to have happened since, were but partial, affecting but some particular countries. Add hereto, that the Assyrian, Chaldean, and Egyptian computation of their annals brings no manner of solid proof of the world’s having been extant so many years, whatever fancy and ambition of antiquity have created; making their kings to have reigned above twelve hundred years a piece. The Assyrians, theirs forty thousand; all which, as brags and boastings, are worthily refuted by St. Augustine.¹ The Persian empire, in Alexander’s time, not being fully three hundred years old. But these exorbitant computations were spread abroad for the honour of those great nations, which we named; unless, which is more probable, they reckoned months

¹ De Civ. Dei, lib. ix., c. 10.
for solar years, as divers have conjectured. But, as we said, these misreckonings have been sufficiently refuted by St. Augustine; and by one who was not in the least obliged to Moses, the Epicurean poet,¹ from the known original of cities, arts, nations, colonies, victories, books, and records, as we have already showed; and by considering how vast a tract of earth and sea was both unknown and uninhabited. I know there are who tell us of earthquakes and conflagrations, as well as floods, which have sometimes confounded all, or reduced the world to ashes, and that it has as often (Phœnix-like) emerged, and been successively repaired; but these are precarious dreams.

Indeed, the school-men hold the world, though created at a certain time, yet that it had such parts, as might have been antecedent to the time in which it really was created, and have been eternal too, had God so pleased. But neither will this hold, since something must still have been before it. Besides the world being composed of mixed bodies, particles of matter, and concretions, full of contrary qualities, could not last for ever, all mixture being obnoxious to corruption. And if the world consisted of simple bodies only, it would not be of use, adapted with all its necessary furniture, as now it is. For we see what diversity of materials is required to the composing of most natural mixed bodies and individuals, which both commenced in time, and require it for their perfection. Successive things must have some beginning; and divers principal things,

¹ Lucretius.
useful and absolutely necessary, are successive—as vegetables, animals, and whatever is maintained by propagation; all kinds of motions, augmentations, and diminutions; since, if that motion had beginning, it had existence and a place, or ubi, before it moved; and, if motion be not eternal, neither can the world be so. So as the necessary supposition of successive alterations unavoidably subverts the world's eternity; because it is composed of such individuals as derive their originals from the nature of their species. For so a tree rises from its proper seed or tender plant before it can arrive to full stature and perfection, and the like will happen in every other thing essentially alterable.

Lastly, as to the invention of letters and other arts, which should deliver to us times past. Though Plato made a god of Hermes, to whom he attributes them, yet we never heard of any more ancient than the Hebrews or Phœncians, Palamede's alphabet, and some Egyptian hieroglyphics. As for the inscription on Seth's pillar,¹ (if no suspected antiquity) it proves nothing to the eternity of the world, no more than the calculations of the Chinese annals, Egyptians, and other nations. It is confessed, both by Diodorus Siculus, Plutarch, &c., that they counted all by lunar years, as

¹ [The posterity of Seth (says Josephus, l. i., c. ii.) having heard that Adam had foretold that the world should some time be destroyed by water, and at another time by fire, resolved to preserve the discoveries they had made in astronomy, and in the knowledge of heavenly things: they, therefore, erected two columns, one of stone, the other of brick; and it is said that the column of stone is still in being in Seirath, or Syrias.—Calmet's Dict.]
we have already noted. Nor was the institution of the Sabbath in memory of the creation, even before the Jewish Sabbath was enjoined, a contemptible argument; nor the division of time by weeks, so universally received. In a word, had the world been from eternity, the very course of rivers, and descent of rains from the more eminent parts, had ere this levelled the profoundest valleys, and made the earthly globe but one vast campaign, by carrying down the looser earth, gravel, and other mould, sufficient to have filled up the deepest abysses and gulphs of the ocean itself.

In the mean time, it was a nice (or indeed rather an idle) question, What God did before He made the world? St. Augustine answers the impertinent, that he did "curiosis fabricare infernum."\(^1\) Doubtless God was a world to Himself, when no world was. Never was he alone or idle. The contemplation of His own glory and perfections is sufficient to entertain Him to eternity, without other society, for He is all. And when he thought fit to create this aspectable piece of work, it was of His own good pleasure, and to diffuse and spread His glory, power, and beneficence, not to receive any the least accession from His creatures, but communicate it.

It was likewise another question, but more modest, from some expression pretended of St. Augustine: Whether God created all in eodem nunc et momento,\(^2\) or made it six days' work, mentioned so in Scripture, only

\(^1\) "Create hell for impertinent inquirers."

\(^2\) "In the same now and moment."
to comply with our weak capacities, who do nothing but in time and successively. To this it is replied, that, according to the literal text, He did it not at once; not that He could not so have done it by a thought alone: ¹ nor that, indeed, He used these words to the dull chaos: but to teach us to deliberate in all our actions, and contemplate what this glorious God has made. Besides, we read that, dividing the supernal waters from those beneath, on the second day, He gave no benediction or approbation, till they were collected into one place after this separation; as if till that were done, the work were yet imperfect, which was not till the third day. Lastly, His reposing on the seventh supposes His desisting from adding any further to His works, or multiplying new species.

Thus have we showed how the creation of the world had its original in time, and in this research, as of man by retrospect from ancestor to ancestor, till we come to the first. For, though it be essential to the existence of a Deity thus powerful, that He be eternal, it is not so of the visible and material world, or aught within it. Creation, as well as generation, being actions, have a natural relation to certain principles producing them. And (as we have said) if we descend from the branches to the trunk and stem, it will infallibly lead us to the root: and if there be no branch but what has an end and top-twig, it were infinitely absurd to think there were infinite stems and roots to that twig.

¹ So Epicharmus and Plato, verbo Dei facta omnia;—"Every thing was made by the word of God."
SECTION IV.

BY PROVIDENCE AND GOVERNMENT OF THE WORLD.

We come, in the last place, to prove there is a God, by the government and preservation of what He has created. Providence is, indeed, but a continual creation, discovering to us His infinite power, omniscience, goodness, and wisdom, no less in maintaining what He has made, than in His making them destined to their various ends. For, although the Almighty desisted from creating any new species on the seventh day, yet it is not meant that He left off from sustaining and preserving what He made. The Epicureans would indeed have their god to be lazy as themselves, but such is not our God, who is a perpetual Act, always doing good, filling our hearts with food and gladness.

But, not to insist here on what Scripture alone discovers of the ways of God, by which He wonderfully blessed and preserved His peculiar people, and divers particular persons in all ages: His judgments on the wicked, destroying kings and mighty empires by His stretched out arm, by signs and wonders; but by the suffrages even of every heathen is showed the just veneration they paid to that incomprehensible Being, upon the contemplation of such things and events as declared His providence, and that the world could not subsist without it. That illustrious passage of Seneca serves for all: "Manent cuncta, non quia aeterna fiat, sed

\[\text{Seneca, Ep. 58.}\]
quia defenduntur curâ Regentis." Things so repugnant, amidst that infinite variety, never could have conspired together, to uphold the wondrous frame of the universe in that admirable order and economy we see it, had not He who contrived it guided every wheel, every action, motion, and property about it. It were, therefore, far less absurd for man to believe himself not to be, than to believe that he or anything in nature sprang from no cause at all; and he, who peremptorily denies that there is any Providence, does worse than he who believes there is no God. So as Aristotle being asked what answer we should give to one who questioned Providence, replied, "A scourge;" intimating that such ungrateful wretches deserved rather to be treated like slaves than men of honour, so generally were the very heathen for this paternal care of God. 2

But, because God does not immediately punish evildoers, and vengeance is not suddenly executed, therefore is the heart of man set upon mischief and unbelief. The lightning and thunderbolt, 'tis true, do sometimes strike, sometimes pass by without their dreadful effects, to show to mortal man His justice, clemency, and power. Insects and noxious vermin also devour the fruits of the earth and hopeful harvests. And is not all this ordered by a wonderful Providence? Should God be severe to mark what we continually do amiss, there would be nothing left, since we daily provoke

1 "All things continue, not because they are made eternal, but because they are upheld by the care and defence of a Ruler."

2 See Grotius De V. Rel. Chris., lib. i.
Him by our ingratitude. But for these His chastisements, we should utterly forget the benefits He confers upon us. The very heathen, therefore, acknowledged this His lenity and long suffering; and that, if their Jupiter should send out his artillery for every offence,

Exiguo tempore inermis erit,

he would soon be disarmed. And we know what Plutarch has concluded, *upon the late strokes of the Deity*;¹ and that, though the feet of God be slow, and soft as wool, His revenging hands are as heavy as lead. Besides, neither is it for nothing that God has ordained some creatures and things, which we think (but which are not) superfluous. Even insects eat up and cleanse the earth of much corruption; and they are medical, and feed many creatures which nourish us; whilst, at other times, they are sent as plagues for our luxury and intemperance, and to show the despisers of His Almighty power what great things He can effect by the most despicable means. And, as to the rest of God's proceedings in this sort, as we shall never here comprehend the cause of all things, so neither shall we know the cause of these; nor why God sends rain and storms, good and evil, promiscuously; washing as well the barren rock and wilderness with His benign showers, as the fruitfullest garden; though we may not, therefore, conclude He does it from no cause, or by chance, because we cannot comprehend the reason.

² De Ser. Virg. Dei.
For, though the pregnant clouds dissolve in the most seemingly unnecessary places, they may be the cause and originals of those rivers, streams, and fountains, which flow from those eminences to refresh the valleys, and give drink and other conveniences both to man and beast. In a word, there is not the silliest fly, or worm that crawls, nor any grain of seed which falls, and becomes lost and scattered upon the ground, but is for the food or help of some creature, at some time or other necessary for us; so as there is nothing made for nothing (though made out of nothing) but such ungrateful creatures, who blaspheme upon these accounts, and from their shallow reasonings.

The most abject, vile, and trivial things in nature are admirable, and those creatures which we reckon most defective, the most curious, and completely accommodated to their several functions. Indeed, some are noxious poisons, yet become antidotes; one fierce animal devours another, lest the wild beasts should increase upon us. Yet have we the benefit of their flesh for food, or fat, or other parts, for ointments, or skins for clothing, and other uses, of the most truculent bears, wolves, and other brutes. Then we find, that those animals which are weakest and less able to defend themselves, and preserve their useful species, are either most swift of foot or wing, or willingly reduce themselves under the care of men; as sheep and other cattle, poultry, bees, &c. And they are spread over all the earth, as well as air and water, without which none can live. How many fruits are there encrusted with thorns,
shells, and other hard integuments, to defend their kernels and nutritious parts from being devoured before they ripen and are fit for use!

And if in nothing here we find all perfection, it only shows that the creature is not God, but He who only is. For the beauty of the world consists not in its separated parts, (which seem imperfect) but united, its order, economy, and concurrence to the end; which shows it to be the work of a wise and voluntary Agent. the nature whereof relates to final causes. Now, if in the universe there be a final cause and last resort, there must needs likewise be a prime efficient cause, which is God, who cannot be imagined to forget his own production, without whose assiduous care the thing designed would be to no end or purpose. He, therefore, doubtless, governs, maintains, and directs what He has made, to the end for which He made it. If, then, He take such care of the least of His creatures, and most insensible, shall we think He takes none of man, for whom He created them; who of all His creatures most resembles Him, and is endowed with faculties to acknowledge his bounty and beneficence?

And now we mention Man. Is anything more stupendous than the providential subserviency and use of all his bodily functions (whether voluntary or involuntary), for the mutual preservation of the whole? The distribution of chyle and aliments, formation and course of the blood, generation of spirits, nutrition and growth of the whole, his natural faculties, and all these acting, whether we sleep or wake, and whether we think at all
of them or no! Upon this, therefore, let us enlarge a little, and consider the hand again.

As man has but one natural and tender covering, and is born with so little defence, he has an instrument to furnish him with all manner of weapons, and is alone a magazine; and that, whilst other animals have, for the most part, but one sort of food and medicine, man has variety and abundant choice of all things. This is what the orator\(^1\) has, from the light of nature only, termed a Divine and God-like work. For albeit there be the same number and contexture of parts, and that the most of these actions and circumstances are common to brutes, yet, when all is done, 'tis plain the use of them is not accommodated to so multifarious and divers purposes, nor conducted with that thought and cogitancy, but may be reduced to some very few ones in comparison.\(^2\) Nor deny we that, as to the structure of the body, and geometry (so to speak) of animals, there is anything in the lever, wedge, pulley, axis, screw, spring, counterpoise, or like mechanism, whose artificial powers and figure are not established on the same principle with the natural motion of animals, as, among others, the famous Descartes and the late Borellus\(^3\) have, with surprising acuteness, made out; but, to make the powers of the

---

1 Cic. De Nat. Deor., 1. ii.
2 De Placit. Hippoc., Plato, l. v., c. 10. Aristot. Mech., c. 31. Lactant. De Opif. Dei, c. 6. The Epicureans did not allow that any organ, or member, was designed to any proper use at all, from any providential cause, but *ex usu vitae* merely, and habitude.
rational soul, in which man is chiefly concerned and distinguished, as merely proceeding from the contrivement of certain apartments in the brain,¹ is altogether wild.

In the mean time, we admire the inventions and machinations of engineers, new and old,² (Myrmecides' ship, Callicrates' Pismire, &c.), and acknowledged they were authors of many wonderful and curious contrivances by their art and sagacity, whilst this stupendous masterpiece of their Creator, and who endowed them with that ingenuity superior to the rest of the animals, and so widely different to all operations and possible perfections desirable to render them sensible of their extraction, must either (with them) be the result of chance, or the base contrivement and modification of the parts of matter, and a little warmth to give it motion, without other form or principle considerable!

And whilst, with all this, we have convincingly shewed how these great wits (as they would be esteemed) do not clearly make out how spontaneous motion can anyways correspond with a pure mechanical hypothesis, it is evidently beyond the activity of the most ingeniously framed parts, or even animal spirits themselves, (as the elegant Burlæus³ observes) however pretended, ¹ Like the combination of atoms and elements to the consequences of Democritus' Hypothesis, or those who follow him. *Talid quidem sunt* nor deny we the effect. *Sed non tamen sunt alicujus gratid*, which we utterly reject. ² Daedalus, Archytas. Cstesibes Hiero. ³ "Cum nec membra hæc, nec spiritus internuntii, aut mandata capiunt, aut mandantem nörint."—*Burl. De Anim. Hum.*
to descend thus into them from the brain. When the musician runs division with his nimble fingers on the harp or other instrument, they so answer every motion of his fancy, as that neither of them outruns or prevents the other, although (as our learned Ent\(^1\) illustrates it), at the same instant he plays, he sings, he dances, and moves at least three hundred muscles, and all this done with that prodigious swiftness as seems to prevent the very thought! Shall we imagine (says the Doctor) all this performed by a crowd of spirits steaming from the brain, and confusedly rushing through the divaricated sextipar nerves into those exiguous passages (according to the Atomists) without a guiding power, or some dexterous and nimble Mercury, to conduct them by the various ways they are to take? But to return to the hands again.

Anaxagoras was used to say, Man was of all creatures the most prudent, because (as we celebrate that organ) he was fitted with hands; but Galen, with much more reason, that therefore he had hands, because it was intended he should be wise and prudent; so as that learned physician is compelled to acknowledge a sublimer cause, as may be seen with great delight in those seventeen admirable treatises,\(^2\) which are, in a manner, but one

---

\(^1\) Antidiatrib., p. 130. [Dr. Ent, afterwards knighted by Charles II., was President of the College of Physicians, London, and one of the first members of the Royal Society. He is named by the author (chap. iii., sec. 2), as one of the first men of his time.]

\(^2\) Galen, "De Usu Partium;" more especially lib. iii. c. 14, in
perpetual hymn to God. In good earnest, the passages are of such a strain, that one should transcribe them all, or say nothing at all, for there is nothing to be left out, whether we consider the dignity of the matter or sublimity of the style. Nor with less, the orator, who is plainly transported with admiration at the fabric of man's body, and particularly of his hands, eyes, &c.; and, breaking into the most pious reflections, ascribes all to the Providence of God.

If the subtle Cardan\(^1\) so much admire a Providence at the structure and working of a mole, as, upon the contemplation of his feet and snout only, (how expeditely he mines into the earth, breaks and removes the stubborn clods, and makes a little earthquake in its working) to confess that despicable animal could not be created by chance, but by some wise design; what may we not conclude of so many other, and especially of man, whose parts and operations are so much more worthy of admiration!

It is in this golden discourse of the *Nature of Gods*\(^2\) that the same Cicero, in the person of his stoical dia-

which he extols the Omnipotent Architect, His power, wisdom, providence, beyond all the mysteries and sciences of the heathen world.

\(^1\) [Born at Pavia, A.D. 1501, professor of mathematics and medicine. He was employed to calculate the nativity of King Edward VI.; owns himself a dealer in the black art, and believed that he was attended by a Daimon from the planet Saturn.—*Biographie Universelle*.]

\(^2\) *Ex quibus intelligitur, quantae res hominibus a Deo, quamque eximae, tributae sunt.*—*Cic. de Fin.*, l. 3.
logists, proceeds to describe the admirable economy of universal Nature, or rather of God himself, (for it is in assertion of a Divine and Providential Being that he argues all along in that incomparable force of reason and stream of eloquence) in framing brute animals, as well as man, after so wonderful a manner. It is then he describes the crafty addresses of the little spider, how some are weaving nets, and toils for the prey, others watching to surprise it. He speaks of the society of fishes, for mutual assistance and provision; of the martial discipline of fowls; descends to beasts, and their great sagacity for defence and covert; how naturally they seek the teat; how educated by their sires; form such artificial nests; and that such as are not able to defend themselves crave the aid of man, and the protection of his reason, as dignifying him above themselves.

Thence passes to the fabric of his body, and, entering into all the parts of anatomy, describes the head, and more eminent seat of the senses. Takes notice how Nature, like a skilful architectress, placed the organ of smelling at a remoter distance from the more noisome and offensive sinks and emunctories: describes the eye, and several tunicles and muscles; the meandering ear, and how the voice is undulated. In sum, after an accurate inspection and comparison, he still reserves the pre-eminence to man. This he proves by innumerable instances worthy the recital: men's eyes, says he, judge better of colours, beauty, figure, and curiosities of art: his ears distinguish the varieties of sounds and
voice more accurately: the palate, variety of tastes, and so of the rest. But when he comes to reason, *quá nec in Deo quidem est res ulla præstantior*, what streams of eloquence does he not pour forth! To this succeeds the instrument of speech, which he calls *domina verum*, the queen, and mistress of all the rest; and, attributing a kind of divinity to it, strews such flowers on it, as none but that prince of orators is able to describe it. "By this," says he, "we learn, by the same we teach. By her we exhort, by her we persuade, by her we comfort the afflicted, encourage the timorous, moderate the transported, bridle the furious, restrain the covetous; it is she who has bound mankind in civil society, and, in a word, made him differ from brutes, &c."¹

But then he takes him by the hand again, and enumerates its ability for all manner of operations in ten thousand inventions. By these, says he, we prepare and vary our food, make our garments, tame wild and furious creatures, and compel those who offend us to fight and conquer for us; and after all these truculent monsters, which with our hands we cieurate, by our hands also we subdue the most terrible of all the elements, the wind and the sea, and domineer over the whole earth; so as our hands become a second nature, even in Nature herself.

¹ *Hac cohortamur, hac persuademus, hac consolamur afflictos, hac deducimus perterritos a timore, hac gestientes comprimimus, hac cupiditates iracundiasque restinguimus; hac nos juris, legum, verborum societate devinxit, hæc à vitâ inani et ferâ segregavit, &c.—De Orat., l. iii.*
Finally, (speaking of his intellectual abilities) he penetrates the sublimest Heavens, and from things supreme arrives to the knowledge of a Deity; and to a sense of religion, piety, justice, and the whole circle of virtues, which render him *par et similis Deorum*, and in nothing inferior but that he is mortal. These are the transcendents and pre-eminences which this admirable heathen attributes to mankind; and what could a Christian more, considering with how particular a care and providence God has invigilated over him above all other creatures?

Turn we our eyes from man a little on other sensitive substances, innumerable as they are, moving in the air, swimming in the water, dwelling in the earth; their diversity, propriety, figures, beauty, habiliments, arms, instincts, actions, ends. How many vast volumes should one be obliged to write to describe them! How much vaster understanding to comprehend them! *Tantis operibus Deus notitiam suam armavit*, says Tertullian. And, indeed, were not the world sustained and governed by an Infinite Providence, like to a crazy vessel, weather-beaten, and grounded without a pilot, it had long ere this been shipwrecked, and fallen to pieces. Volcanoes, inundations, conflagrations, plagues, and epidemical sicknesses; factions of unruly people, rebellions, differences of religions, and violent commotions of ungovernable men, and tyrannies; no element in Nature, but, at one time or other, domineering, and threatening to swallow and reduce all into principles, did not some Almighty Power compose these disorders, reduce the proud and
swelling waves, and say, Hitherto shall ye go, and no farther.

Nor is this great God molested or distracted with this multiplicity of things under His care, as some Heathens fancied. I say not all; for Socrates convinced Aristodemus\(^1\) the contrary, by the soul's governing the body, without the least confusion; whilst others fancied as many several deities and powers as there were employments; and accordingly assigned them their particular provinces, measuring them by the possibilities of men. Neither must we imagine the Almighty does anything in time, and by succession, (as we finite creatures do) but He sees, thinks, acts, disposes all things, *semel et simul*, even to the determining the nature of every cause, the leaf of every tree, every hair of our heads, every sparrow that falls and lights upon the ground; and knows all that does not actually exist, even the ultimities of what can or may be; nay, future contingencies and events, which He does not necessitate, to the end we may entirely depend on Him alone.\(^2\) But thus some wretched sophists and shallow fops took umbrage that so many and different notices and things should be assigned to any one God, as fancying him a man, no more capable than themselves

---

1 Xenophon. Mem. 1. i.

2 If God did not comprehend and take in particulars, as well as universals, how could He comprehend Himself, since all generals subsist in particulars? And should these latter fail, (as they would, did not God preserve them) the former must come to ruin also.
of what we attribute to him: and as if He, who made all, understood not what He made, even all the springs of motion whatsoever, and possible resorts.

We see the sun at the same moment, without the least fatigue or confusion, employed about innumerable services, for all the creatures, animal or vegetable, and all things under heaven; all distinctions of seasons, productions of plants, maturity of fruits, concoction of minerals; meteorizing of vapours, cherishing animals, enlightening the world, and other numberless uses, which we take no notice of. But, especially, how the soul of man (as we have instanced) is able at the same moment of time to contemplate the remoted heavens and its various revolutions; directs the body and its several affections, and comprehends such wonderful and distant notions, arts and sciences, and things metaphysical and abstracted, without the least trouble or distraction. Now, if a creature soul is able to perform all this, how much more able is the Great Soul of the World (Creator of Souls) to govern, manage, and dispose of all things, and who has, for infinite occasions, infinite wisdom, power, faculties, and accomplishments!

I know there be who have with bold blasphemy imagined that, had they been of counsel with the Great God, when He created the world, they could have contrived it better. There should, say they, have been no wildernesses, nor barren rocks; no noxious beasts, no birds of prey, no dissensions among people, no death nor misery in the world. Epicurus and his scholars of
old, and some daring persons of later times, make this an argument of there being no God, such faults they have discovered in the workmanship, as if all were made by chance. But we have already shewed the pride and vanity of these impudent and ungrateful wretches, and with what incomparable wisdom God has made all things as they are. So as with the pious stoic: "He who would," says he, "undertake to mend what is done, and contrive things to more advantage, should in the first place try to mend God, and teach him better; but if he find that too hard for him, mend himself, and no more entertain so wicked an imagination."

It is admirable what Xenophon makes Socrates to enumerate of the incomparable advantages God has enriched man with above all the creatures, discoursing of His care and providence to Enthydemus, and how much we are obliged to be thankful: that though the rest of animals are many of them stronger than man, yet they are his vassals. In a word, the whole dialogue seems a paraphrase on the eighth Psalm, and is so full of what Cicero has written, (and we have already cited) that it was certainly transcribed verbatim out of our author from the Greek.

There are those who complain that they had not eyes in their neck behind, as well as in their faces before, and pretend to refine on the works of nature, and that God has not given them the legs and strength of horses,

---

1 Lucretius.  
2 Epictetus.  
3 Xen. Mem., lib. 4.
and that man comes into the world so feeble and defenceless—

"ut sævis projectus ab undis
Navita nudus humi jacet," &c.¹

"The little infant child cast out,
Like a poor mariner, tossed by fierce seas,
Naked on earth the helpless baby lies,
When Nature makes it in the light at first
By throes out of its mother's womb to burst;
And that with mournful cries the place it fills:
Justly, whose life must pass so many ills.
While divers cattle breed, herds, and wild beasts,
Nor need they rattles, or to be caressed
With broken words of the fond nurse, nor yet
Need they to change their clothes for seasons fit,
Nor arms, nor bulwarks raise, nor a high wall
To guard them, since the earth all things for all
Provides......"

Or, as is most elegantly described by Pliny;² and by Plato in his fiction of Protagoras, where he shows how mankind, coming naked into the world, was committed to the care of Epimetheus, to supply what he wanted; but that he had been so profuse in furnishing the rest of animals with all things necessary, and so improvident as to man, that there was nothing left for the poor creature, till Prometheus stole fire from Vulcan, and from Mercury the use of it, who was sent by Jupiter to assist his other wants, and to teach him arts and sciences. And we must indeed confess that there is nothing in nature more helpless and utterly destitute;

¹ Lucret., lib. v., 223
but this is so far from detracting from the Providence of God, that it infinitely exalts it. The feeble infant, truly, can neither stand nor go, feed, clothe, or shift for itself, whilst we see other living creatures come vested, armed, able immediately to find their pasture, defend and maintain themselves. But see: no sooner does this child grow up, but he covers himself with their spoils, feeds on their flesh, and uses them for his vassals. They plough, sow, carry burdens for him, and do whatever he pleases. For though he have not the strength of the elephant, the swiftness of the roe, the sagacity of the dog, nor the bulk and procerity of an oak, yet he has prudence, and reason, and faculties, which not only supply what he may seem to want of the perfection of other creatures, but transcends them. He conquers and subdues the strongest and fiercest of them; brings the sturdiest cattle under yoke; manages the most ungovernable horse; catches the swiftest fowl; climbs to the highest nest; takes the craftiest fox and indomitable panther in nets, gins, traps, and a thousand surprising inventions. "For every kind of beasts, and of birds, and of serpents, and of things in the sea, is tamed, and hath been tamed of mankind," so as to serve both his necessity and recreation. Moreover, he digs into the entrails of the earth; dives into the bottom of the seas; shuts out and admits the heat of the scorching sun at his pleasure; prepares his food; knows the

2 James, iii., 7.
use of fire for a world of purposes; and clothes and warms himself, which no other creature does beside him. He builds lofty pyramids, cities, and enormous fabrics, out of the bowels of rocks; and makes whole forests of sturdy oaks and stately pines descend from the lofty mountains to the lowest floods and far-distant ocean, where go the ships, and where is that Leviathan whom God has made to take his pastime therein. But even him, with his harping spear, he boldly encounters, subdues, and brings captive to the shore. He cuts huge channels of water, joins seas to seas, raises forts impregnable. He levels mountains, and sometimes removes them with his artificial lightning. And yet nothing of all this, almost, by virtue of his natural strength, (in which he is so far inferior to brutes) but by that Reason which the providence of God has supplied him with, stronger than all created powers on earth.

How unreasonably, then, does ungrateful man cavil, as if he alone were neglected; whereas, should God have gratified his foolish wish, he would be the first to deplore his unhappy condition, and wish himself like other men. Plato, says Lactantius, with better reason might have thanked the gods he was a man, and condemned those ingrates, who are not satisfied in being the noblest of creatures, unless they also had been beasts. How vain, yet impossible, that were, Firmianus handsomely demonstrates, when the philosopher gave thanks

2 Opif. Dei, c. 3, et de falsâ Rel., i. i., c. 8.
to the Deity that he was a man, and not a beast; born at Athens, not in an obscure village: than which, says he, nothing is more impertinent. As if, had Plato been indeed a brute, he had been Plato. How much wiser, then, had he proceeded to have reserved his thanks, that he was an ingenious, docile, and learned person, since so many dull blockheads might have been born at Athens, as well as himself, &c.

But for the rest of those malecontents. Were I a nightingale, says honest Epictetus, I would do as a nightingale does; but since I am a rational creature, I will laud and celebrate my Maker. Let us learn of this Christian Heathen. I tell you, Seneca is in admiration at these peevish wretches, these *iniqui divinorum munerum aestimatores*, as he calls them. The whole passage were worth transcribing, but more the pondering of it by our wits and drolls, who, as the philosopher speaks, are (as now in ours so in his time) arrived to that pitch of impudence, that they hated even Nature herself, because she had not made them Gods, whereas they ought to have been thankful they were men, and dignified with the second place of all His glorious and royal palace, enriched with so ample a dominion and so many prerogatives; that all the creatures are subject to him; that he is endowed with such virtue and powers above them; that his soul lustrates and pervades through all things; his thoughts preventing the swiftest motion of the heavens; in a word, that

---

1 Enchir.  
2 De Benef., l. 2. c. 20.  
3 "Unfair valuers of God's gifts."
mankind enjoys such an accumulation of earthly blessings, that, when he shall have well surveyed them all—because he can find nothing so accomplished as himself, for which he would exchange his condition, and choose what he most desires—he must be driven to confess himself the very darling of Nature, and that the Gods have placed him next themselves: which is the supremest honour we are capable of, *Magna accepimus, majora non cepimus*, so brim-full, that we can contain no more: thus Seneca.

To this let us add the wonderful and wise contrivance of the aspectable world again, and its furniture; that in all this tract of time there should not appear the least crack, defect, incoherence, or decay of any of the most minute parts or accessory; so as to require need of mending, repair, or of being better excogitated for the use and purposes they first were made, but that all continue as they did from the beginning, (as the Atheist in St. Peter tells us themselves acknowledge) is of stupendous consideration, and asserts the wisdom, power, and providence of the Creator.

Will not the Heathen rise in judgment against our modern Atheist? For, indeed, not only the celestial bodies and their regular courses, and more illustrious instances of the Divine Providence in the mundane system, but every tree, and plant, and flower, and fly declare His goodness, care, and vigilance, and that in wisdom He has made them all; that both Heaven and earth are full, top-full of His riches, I say; all that is

1 II. Pet., iii., 4.
on the earth; all that is in the earth, minerals and stones; all that is above the earth, the glorious orbs, the vicissitudes of seasons, propagation of species, and exuberance, in their several elements, for their clothing, food, delight, medicine. The faculties, instincts, polity, combinations accommodating all things to the use of man, above the rest. Not that the universe was only made for us; the whole not for any part, but that part for the whole, and the whole for the Maker, though the things of this inferior world may be said to be principally made for man, while other superior creatures may not be altogether unconcerned even in this visible creation. Nothing, then, of all this could subsist without a wise supreme cause or moderator, or possibly be the result of chance or blind necessity operating on senseless matter. Nor is human nature a mere machine, nor our mind and soul the mechanical creature of motion; nor does any the least thing hang merely by the links of natural causes, but is the decree of a most admirable disposer; the structure and formation of man alone being as great a proof of the Deity and His providence as that of the whole world itself. Lastly, the preservation of empires and governments, as well under monarchs as republics; that so many different men of so many different minds, interests, and affections should submit to one, as a few for so many ages have done; as well as the translation of kingdoms and governments by such wonderful methods and means, for the punition of tyrants, and the vices of men, of which history abounds with examples. And what unexpected events
have followed: as in Alexander's conquests, Augustus's peaceful time, the success of the Turks against the disagreeing Christians, the present lowness of Spain from their inhumanity in the late revolution.

Nor can the unequal distribution of prosperity and adversity of virtuous and religious people at all prejudice God's providence to any one, who considers that our condition is totally independent; and that, when at any time Almighty God is pleased to disappoint our expectations, it is for reasons perfectly known by Him, for some necessary and prudent end, most just and equitable, though we at present comprehend it not. So as when it is said, "the race is not to the swift, nor the battle to the strong, neither yet bread to the wise, nor yet riches to men of understanding," ¹ &c. It is not meant as if all fell out by adventure, but that God disposes otherwise than we conjecture. For He only sees the heart, and can tell what cross events and inconveniences would succeed our contrivances and imaginations, should everything be as we desire, who know not what is best for us. And thus, likewise, does God show His absolute dominion over His creatures; and would men but contemplate the exceeding great reward designed to holy and excellent persons for their short sufferings here, and ordinary disappointments, they would, instead of murmuring, doubting, and censuring, give God thanks for everything that befalls them. The most righteous man living being but an unprofitable servant, happy they, who, enduring afflictions and

¹ Eccles., ix., 11.
animadversions here, shall be accounted worthy to escape the judgment to come, when there shall be rewards distributed, and crowns of immortal glory. But, besides this, it sets the higher value on piety, virtue, and obedience. It may also be generally observed, that holy and good men have commonly the greatest temporal blessings too; and that if any thing intervene to the contrary, it is evidently from their own want of prudence and timely caution, or for their good: not here to pass by the Divine vengeance upon notoriously wicked men, even in this life also, and how uncomfortably they go out of it, in the midst of all their seeming prosperity.

The sum, then, of all we have here produced, is to prove what is most manifest, *That there is a God.* Indeed, we cannot see God, whom none shall see, and live. The most sagacious of our natural organs would be oppressed with the splendour of that vision, till they come to be refined, changed, and spiritualized; and then shall we see and contemplate Him as He is, in the face of Jesus Christ, who is the only image of His countenance, and in whom all the perfections of the Godhead are conspicuous, to the filling the largest of our capacities. But, considered as they are here, so far are we unable to behold God, save in His works and Providence, that we see not our own selves; that is, our souls, (for the soul is the man) which is yet so near, so intimate, and perpetually about us. But, though we can neither see God, nor our souls, we may and can have a real idea of both, without a sensible vision; and
our reason can represent that which our imagination fails of—our imagination represents Him material, our reason immaterial; our fancy corporeal, our reason spiritual and incorporeal, wise, powerful, perfect, the sovereign being of beings; and it is a natural impression in our soul, which then exerts itself, and most appears when we reason best. But, indeed, all our certainty of natural things begins at our senses, by the sense or impression of the things themselves, or their operations. And yet, though I see not nor touch many things with my organs, because imperceptible, that all I do proceeds from some cause, my understanding certainly concludes.

It was the vain objection of Vaninus, that, were there a God and Providence, He would hinder men from sinning against Him. But power is either absolute, or tempered with justice, clemency, and other virtues. By His absolute power He is able to effect all things, but, as just and mercifull, He does not. For, though he permits sin to exercise our obedience and make trial of our virtue, He gives thereby occasion also of manifesting His love and favour. Without this, we had never come to know the infinite degrees and extent of it, since it is reward and punishment that produce love, fear, and obsequiousness: forasmuch as God is pleased to act with mankind as with a rational creature, and by such methods and objects as He is pleased to propose, and not altogether by blind and casual impressions. Unless we understood the unfathomable depths of His infinite knowledge, wisdom, and other attributes, we can never
safely pronounce concerning the reason of His actions, who educes good out of evil, by expedients and ways most just and reasonable.

From all, then, we have alleged in proof of a Deity, it can hardly be that there ever was such a monster as a thorough-paced, speculative Atheist in the world. A small and superficial insight into nature might, perhaps, as my Lord Verulam says, dispose some sort of men to think there were no God; but a thorough and deeper research will make it impossible: so convincing is every thing in Nature. And when all is said, it is every good and wise man's interest and advantage to believe a Deity; for, supposing (but by no means granting) that there were none, this infidelity has so many sad consequences attending it, and the other so infinite advantages accompanying it, that a wise man would live as if there were, though there were none, as certainly, by all that we have shown, there is. And, when our atheist has produced all he has to say against it, it is still more difficult and inconsistent to prove the negative. All Nature cries out; all nations, ages, people, sciences; all consequences, the chain and ligature of all subordinate things; universal consent, both of learned and unlearned, civil or barbarous; the consequence of all Providence; all reasoning, all the arts and sciences; astronomy, by the motion of the celestial bodies; jurisprudence, by all that is just and equal; history, by innumerable events; morality, by every virtue; nature, by all her operations; all the philosophers, by their most accurate researches; and Aristotle himself, by his
acknowledgment of subordinate motion leading to the First Mover; Des Cartes, by his free choice of a superior intelligence, confining matter to a particular motion and quantity, and that nothing but a Prime Cause can produce thought or any thinking principle in an organic body: in sum, even the wild and extravagant motion of Epicurus's atoms and different determinations of them in such perfect creatures, do all of them demonstrate the being of a God and of His providence.

In a word, our senses, imaginations, consciences, passions, and even all our faults, the voice of every sin, (fearing a future punishment) aloud proclaim it. To conclude, be the event what it will, he who believes a God hazards nothing valuable, should he be mistaken (as it is not possible he should); but he who does not, or but doubts of it, is infinitely miserable; there being no medium or proportion between the trifling satisfaction we deny ourselves so short a time, by living well and orderly, and the eternal damnation of a vicious infidel and obstinate Atheist. Nay, admitting the probabilities equal, our passions and wicked inclinations indeed would have no God; but the interest of our reason, conscience, health, and other benefits of virtue and sobriety, the contrary.

Were there no God in the world, virtue were a chimera,—common honesty, folly,—fidelity, simpleness and ridiculous folly. Who would trust his nearest neighbour or relation? All governments, safety, and propriety, would disband and vanish. Truth, justice, humility, charity, temperance, sincerity, and friendship—
in short, all that elevates our nature above other creatures—would expire.

And now to conclude this long, but necessary chapter: if all these arguments will not prevail, no miracle will, nor ever can. For, (as that noble Chancellor\(^1\) has observed) though we read of many illustrious miracles, which it pleased God to work upon other occasions, we never read that He vouchsafed to work so much as one, to evince the truth of His own existence, power, wisdom, and beneficence, for the establishment of natural religion, or to convince one obstinate Atheist. Since even the light of nature were sufficient, and the wonders that are daily the objects of our senses, the miracles of every moment, though we are blinded by the commonness of them, and so do not sufficiently heed them. Else we should confess that everything we see and enjoy is a miracle, and such as can be no other than the effects of a Divine and Almighty power. Indeed, other extraordinary favours have sometimes been showed to heathens and idolators, who acknowledged a deity, though they erred, of ignorance and not of obstinacy, about his worship: but never to any professedly believing none; because it is plainly monstrous, prodigious, unnatural, impious, and ungrateful, beyond all reproach or sufferance.

\(^1\) Lord Bacon.
CHAPTER II.

WHAT GOD AND THE SUPREME BEING IS.

SECTION I. HIS ATTRIBUTES.
SECTION II. OF ANGELS AND MINISTERING SPIRITS.
SECTION III. OF THE INTELLECTUAL SOUL.

SECTION I. HIS ATTRIBUTES.

The felicity of man consisting in the contemplation of the highest Cause, we have already, by undeniable arguments, asserted the being of such a Cause. By the light of nature, we are convinced of His existence—by the light of grace, of His essence: Reason dictating the first, Revelation the latter. And yet to determine positively what God is, was thought so difficult, nay, so impossible, that not only Simonides, (in his famous reply to Hiero) but not any one of the philosophers were able to solve the question, farther than to acknowledge that He was a Being that gave to all things their being. There were, indeed, of the Physici, (as the Ionians named them) who, degenerating into Atheism, and making all the result of motion and matter, wholly left out the Divine Cause. Whilst others, on the contrary, left out the natural and necessary cause, and held that God was all things, and all things God; not
distinguishing the Creator from the creature; and so
made inanimate bodies under several forms the sub-
stance of God Himself. That God, containing all
things in himself, upon a time displayed and brought
them forth, as being what is said of Isis, ἐν καὶ πάντα. Indeed, this All-in-one and One-in-all doctrine (so ad-
mirably pursued by Hermes in the Asclepian dialogue)
may in some sort be true; as when he calls him the
radix, or root of all; but these did not penetrate the
thing, but as a cause, not the definition; much less his
attributes, which they could never comprehend to fix
in one. The whole consessus of the Heathen deities
had their several powers; but that any single deity had
them all they judged impossible. Those who come
nearest in their notions, made God the mundane soul;
as for instance Seneca;¹ and Pythagoras cited by Cle-
mens to the same effect.

This they had from Thales, Anaximenes, and the
rest, who made him all the elements, denoting his uni-
versal and immense extent and influence. But then
this must be taken with reference to His power and
omnipotence only. For otherwise, should God be the
soul of the universe, (as we understand the soul) how
should the human soul be happy and unhappy at the
same moment? As when in one place, or member of
any animate creature, it is sensible of pain and torture,
whilst it is pleased and delighted in another, according
as the matter, or animal, happens to be affected with

¹ Quid est Deus? Meus Universalis.

Nat. Quest. i. Praef.
the universal soul which animates it? This, therefore, is to be taken for that diffusion of life and motion which God does universally impart to His creature, nay, the whole creation, and not as being any part of His divine substance, which is altogether incommunicable. So as what this great God formally is, though He dwell in the light, it is a light not to be approached by us, by reason of the thick darkness which environs it, (like that described by Moses on Mount Sinai at the promulgation of the law) or rather the darkness of our understandings to comprehend it.

Wherefore the wisest of philosophers endeavoured to describe Him rather by what He appears in the creature, and the wondrous works which declare His power and wisdom. Not that He is like to any of them for any eminence or perfection in them; but as they approach Him in virtue and goodness, they may be so far said to have a resemblance of Him in a moral sense; whatever is excellent being an emanation from Him. Nostri melior pars animus est, in illo nulla pars extra animum, totus ratio est. The soul is our best part; God is all soul, the noblest part, for He is All. And when we are able to define what that part of us is which has no parts, we shall be best capable to say what He is, who is All. Till then, men may rack their wits and study high and lofty notions, but never shall they come to know positively what He is, but rather by what He is not. He is yet all we see, but all we see is not God. All things (says Trismegistus) that are and that are not. Those that are He has manifested from Himself; those
that are not, He contains in Himself. They come to know positively what He is, but rather by what He is not. He is yet all we see; but all we see is not God. How is it possible we should know what He is, (so as to define Him) who know not ourselves, namely, that which makes us what we are, our souls? When we come to know the God within us, (as Seneca says) we may then come nearer to the mark; but it is not visible to us yet. No; not though He be every moment in us, near us, and about us. Whence the notion of an intellectual sphere, whose centre was everywhere, circumference nowhere. Thus the philosophers called Him Friendship, Fate, Nature, the Sovereign Good: in a word, they described Him by His attributes; nor was there any of them left out, which some of their wise men did not expressly mention: so as Minutius tells us, one might in his days have thought the new Christians had been philosophers, or the old philosophers Christians. Thus Plato calls him the Idea of the most consummate perfection; Aristotle, the Leing of

1 I find this prettily explained in that of Ocellus (in Stobæo). "Life," says he, "contains the body of animals; the cause of life is the soul—concord contains houses, cities, estates; the cause of concord is law, and the fountain of law is God."

3 Parmenides and Hesiod made Love the supreme Deity; Love being an active principle, and cause of motion; and indeed it is the first and greatest; for God is Love and Beneficence; whence all this theogony and cosmogony springs.

4 Lib. de Rel.
Beings, whose "miserere" he is said to have implored at his last agony.

Nor did the ancient Pagans intend any more by their several names than the divers attributes of one Deity, representing them all. Seldom do we hear them imploring these deputy gods, when they were in distress, but held up their hands to heaven, the seat of Jupiter, not to the Capitol, or Pantheon, where all their statues were enshrined; which Tertullian notes as "concurrent testimony of Unity." And thus, whilst without God in the world, did the Heathen grope after Him, though He was not far from any one of them. For what was Jupiter but the true Jehova? So Macrobius, from a certain oracle that the Supreme Deity was to be called Jaô. Lastly, touching the unity of God, (besides what we have alleged) the very poets, who took the greatest liberty to set off and adorn their fictions with the introduction of so many deities, spake but of one, when serious: nor did Plato mention more, when in earnest—

Εἰς Ζεὺς σὸν σοφία δυνάτος θάμα καὶ πολὺ-δλὸς.  

One God, wise, omnipotent, and happy; for so Phocylides

1 So when Thales makes him Water, Anaximenes Air, Heraclitus and Hippocrates Fire, the first born Light, &c., they meant but the vast expanse of matter. And those who held He was a body, and that qualities and forms were entities only distinct from body, intended only, substance. Hence "Ἡ ἀληθινὴ σοφία, οὐσία, κἡ ἡ ἀληθινὴ οὐσία, σοφία. Solid wisdom is substance, and Truth has real existence. To the same purpose Heraclitus Ponticus, Alexander Aphrodisæus, Theophrastus, Zeno, &c.
sums up His attributes in one verse; and it was the creed of the Platonists universally. To these agree the sybils; and it has been the voice of their very oracles, who sometimes are forced to speak the truth, as the unclean spirits to our Blessed Saviour: "I know thee who thou art, the Holy one of God." From all which has been said may be collected this definition (even from the suffrages of Pagans only) that God is one perfect conscious intellect, mind, and being, existing from all eternity, and giving being to all things.

But to leave the Heathen a while to the light of nature; remarkable is that which Justin Martyr relates in his dialogue with Trypho, the Jew, that, being extremely inquisitive of the nature and attributes of God, after he had consulted all the philosophers, and run through their sects, he professes they none of them could give him any satisfaction, till he happened to meet an ancient, venerable person, that was a Christian. Let us, therefore, see what their thoughts and conceptions are, and how they define Him from Divine revelation: we say Divine revelation, for that none can tell what God is, but God Himself. From His mouth, then, His holy oracles, we have the most conspicuous manifestations of His perfections, and in Christ, the most express image of His person. But the depth still remains as to any adequate definition of those incomprehensible perfections. For when we shall have said all we can, God is still the same uninvestigable nature; the most known, and yet the most unknown. Than

1 St. Luke, iv., 34.
His being and existence nothing is more plain and evident; than his essence and nature, nothing more obscure and concealed. This yet we may safely affirm, that He is a pure and total act, without matter or form.¹ He is one uncreated mind, a perfect and incorporeal existence, a real substantial spirit, comprehending Himself—the infinite extent of his unlimited power—the possibility of all things, and their intelligible postures, together with an example or idea of the universe. In a word, He is all beyond all we can conceive; and therefore did the very Heathen define Him rather by abstracting all imperfections, than undertake to declare what positively He was. We therefore best conceive Him by His glorious and Divine attributes; which yet differ nothing from His essence, though, in respect to us frail creatures, incapable of comprehending all things by a single act, they seem to be different notions. But there is the Almighty God, great without quantity, good without quality; just and merciful without passion or partiality; everywhere without motion; in heaven itself without place; comprehending all, comprehended by none. Thus far were the Gentiles orthodox. But what they had from the light of nature, we

¹ God is *Eternal*, without cause, beginning, time, or succession.  
*Omnipresent*, filling all things, yet without parts or extension.  
*Omnipotent*, able to educe and create out of nothing, and reduce to nothing.  
*Omniscient* of past, present, future to continuance, and every thought before we think, and that without imposing any fatal necessity on human action.
Christians have by that of His word, wherein He has most plainly communicated Himself to be a spiritual, immaterial substance, almighty, powerful, eternal, wise, holy, just, merciful, supreme God.¹ This whilst the Heathens could not reach, nor how it was possible for so much perfection to be in one; they assigned the several attributes to distinct and several powers, among which they held one supreme. But let us now consider His attributes more particularly.

SECTION I.

PART I. GOD'S ATTRIBUTES.

1. We may safely pronounce God to be a most pure and simple being. For, had his existence any mixture or composition, then must the ingredients (at least some of them) be the First Cause, or principle. Now, that which was first has no parts or dimensions, and is therefore pure and incorporeal, and, if so, incircumscribable, and immense; having nothing to do with place or ubi in the manner of bodies: and so of necessity infinite, and of infinite there can be but one, two or more infinites being contradictory.

2. Next is evident that God is a spirit immaterial. For indeed there may be substance without matter. We commonly fancy substance to be only something of bulk and body; whereas a spiritual substance is a puis-

¹ Not obscurely revealed in His tremendous name, Jehovah, which the Jews say none have ever known how to pronounce, and therefore use Adonai as Lord, instead of it. Jah signifying ens, or existence, the I Am declared to Moses out of the fiery bush.
sant, intellectual being, without dimension, figure, parts, or passions, and therefore no more the object of sight than the clearest air, nor of our touch, than is light; and consequently not susceptible of the laws of matter, to be rarified and condensed; nor immovable till something moves it, as matter is. We must therefore conceive God as a substance, yet as incorporeal, and not an immense gross matter. For, were He such, there could be no other matter or substance in the universe. He is, therefore, not any corporeal substance.

Moreover, this incommixture and simple purity of parts and principles, being yet of nearest resemblance to light; He is often called the Father of Light, but of such a light as is unapproachable either to our eyes, or clearest understanding. However, the Father of Spirits, who communicates so much to the material world, may be thought to hold a nearer and more immediate communion with our souls than with our bodies; as seeming to be that to the mind in us, which the sun is to the eye, but still by a very faint resemblance. This, therefore, is only to show, that, whatever is most pure and transcendently excellent in the creature, is so superlatively in the Creator. Nor can we imagine the author of all Beauty, Glory, Wisdom, Knowledge, Power, and all Perfection, to be less Glorious, Pure, Prudent, and consummately Perfect, than the things which He has made.

3. The next incommunicable attribute is his Infinity; and this necessarily implies his Eternity. Something of necessity must be eternal, else nothing (as we proved) could be anything. All things showing their being
from one, that being must be from ever; seeing that nothing can make impression on, destroy, or alter Him, who gave all being and power to all things.\(^1\) He is an everlasting now, or instant. Hence that of God to Moses, \textit{I am.} He was before all things, who is all things to and in Himself.\(^2\)

In the mean while, there is nothing so distractingly incomprehensible of the Sovereign Being, and about which our deepest research is more at a loss, than the notion of infinite and eternal, be it person, time, or space; not because it may be of itself inexplicable, but because we have no instruments, tools, or faculties, capable of comprehending it, or to work on a thing so much abstracted from matter, and things which fly our senses, common or intellectual, viz., that anything should never have had being, or shall have ending. God yet cannot exist without this perfection, it being absolutely essential to His being. When, therefore, we hear of difference of time to God, it is spoken to support the weakness of our capacities, which cannot conceive anything without it. And to this attribute of eternity did all the Heathens give suffrage,\(^3\) it being so plain that nothing can pass into actual being without a foregoing cause; and if no cause could give being, nothing can take it away, and so it must be eternal.

\(^1\) This is called by Boëthius an entire fruition of interminable life and felicity, at once and together, which distinguishes it from the eternity of souls, whose eternal being \textit{has commencement}.

\(^2\) Tertullian. Theophylact.

\(^3\) Aristot. De Cælo, 1. 2.
Thus we have abundantly showed that God is either essentially and of Himself, or from some other principle: that if He have beginning, it must be from some fountain or source which always ran, and never stopped. If He had no beginning, He must be self-existent; and there is no medium; we must for the rest acknowledge a subordination of causes and effects even to infinity, which were absurd; or else be driven to confess a necessity of existence, whence all His other attributes flow; whence all our qualities in like manner proceed, from the virtue of second causes, communicating something to us which before we had not. And thence it is necessary that the measure of these qualities should be governed by the measures and power of the agent.

Now, when a Being has all that it has from itself, his attributes and perfections become infinite and unconfined. And this Infinite, for being but one, creates that unity in the Deity so little heretofore understood by even the wisest Heathen.¹ That, indeed, which induced the less reasonable and discerning to fancy more than one, was, as we have showed, their conceit that so many perfections were not competent to no more; besides the vain ambition of others who affected Deity themselves, as flatterers made them. Hence Alexander had been almost persuaded by sycophants, till, being wounded, he saw his blood, and grew faint. The rest, forsooth, would be heroes, at least sprung from gods; and it was the desire of most great cities and countries

to have each their tutelary deities. Also from the stupid and carnal idea of brutish people, who fancied their deities to marry and propagate like men; from which impertinent fiction sprung the multiplicity of idols. Not considering that were there a plurality of Supreme Powers, they could not be gods. Unity, then, of perfection needs noting, as possessing all things in itself; and if so, not multiplicable; many Infinites being inconsistent. We never read of two monarchs ruling together, whatever we call them by solecism; and even colleagues have seldom lasted without jealousy or open hostility. Cæsar and Pompey could not agree, and majesties, as well as rivals in love, never sit on the same throne. Aut Cæsar, aut nihil.

We have in the former chapter made appear how this Oneness is vindicated by everything in nature, as well as polity. One father of a family—one king in a kingdom—one shepherd of the flock—one ox in the herd—one mistress bee. Never was any house or kingdom divided that could stand: Almighty is God's proper name: He being but One, has no name but one; and in that alone is comprehended King, Lord, Father, and Master. He is our shepherd, and we are the sheep of His pasture, as David, divinely. In sum, whatsoever implies Oneness, cogitating all the parts of matter. This was that one mind, or spirit, interiorly operating; and, therefore, as Plato so eminently, as we observed, calls Him God in the singular, to attest truth. Indeed, the Romans had a prejudice to this unity, especially that of the Christian persuasion, pretending they subdued the
world without His assistance; several portents happening amongst them, as they fancied, confirming their opinions, as is summarily set down by Minutius Felix, recited to his Cæcilius, where he describes the Pagan systems, not much unlike that of Epicurus, of old, and our later Atheists, who ascribe all to chance or transrelementation. And as to other human vicissitudes, to uncertain fortunes, through the lazy humour of concluding, without sober reasoning. But to this they attributed their successes, namely, to the tropical and regionary deities, and their entertaining so numerous a train of gods and goddesses; in this, perhaps, more reverend, that whereas other nations were wont to blaspheme the vanquished gods as cowards, and weekly, they honoured and received them so kindly, as to chain some in their temples and oratories, lest they should get away and forsake them.

But to speak no more of this so oft repeated. Two causes are impossible; for that all things should depend on one, while there are more independent beings, are contradictions insufferable; and if more gods, then were not all perfections in one God; and so one should have power, the other none; and they might have contrary determinations and wills concerning the same thing; which soon would dissolve all government; whereas God is a God of order,¹ the God Sabaoth, and is, therefore, so One, as no unity in the world is besides; and yet, not that one, as a species, comprehending

¹ Isai., xlv., 5, 6, 30 — xxi., 23, 24 — also xliv., 8; Deut., xiv., 35, and xxxii., 39; Ps., xviii., 13; John, xvii., 3.
many individuals, nor as a body divisible, and that He has parts or extremes; but simply one, as nothing is so one. If God were not one, he were nothing; if more than one, men would be to seek which to worship, and fluctuate upon various and uncertain objects. In a word, all irrational agents are His creatures, and the rational His children; for, as a Father, he begets us; as a Father, maintains and nourishes us: so far as the mere act of creation may be styled generation, God is our Father; for in Him we live, and move, and have our being.¹ We are indeed the sons of men, when we do amiss; when well, the sons of God: agreeably to that of the philosopher, That God was the common parent of all, but more particularly of good men.²

4. *Omnipotence,* which in nothing more appears than in His educing something out of nothing; of which we have spoken at large. For in regard of His eternal right and power of making, what, when, and how He pleases; of possessing whatever He makes; of using and disposing as seems good to Him, His power is absolute. So infinitely do some extol His omnipotence, that Lactantius unwarily seems to intimate, as if the Deity produced even Himself; namely, such as He willed Himself to be; and so be the cause of Himself.³ But this is extravagant: nor did God result from chance or necessity of nature, as if His being were imposed on Him;

¹ Tertull. adv. Marc., l. i., c. 5.
² Plutarch, in vit. Alex.
³ Plotinus.
but He is as much that which He would be, as if He had made himself.

He is able to do all things not repugnant to His nature; as to be sick, or die, or be false.\(^1\) He can do all He will, though He do not all He can; that is, all that can be done, and implies no dishonour or contradiction to His veracity and excellency, as St. Augustine\(^2\) says. In respect of all other objects and actions, His power knows no bounds; nor were all His other attributes anything, without it, but speculative notions. And whatever dominion others may have of mankind, one peculiar title has God, which none but He can have over us, that He gives us our being, and is of right our Sovereign Lord and Potentate. God's omnipotence, then, consists in an ability to do whatever can be done, and the object of this power is whatever is possible. But what is impossible is no adequate object of power, but destroys it, rather, and dishonours it; as that He should undo the past, make another God like himself; destroy\(^3\) or deprive his own substance, or corporify and change it. God is with all reverence said not to do that which belongs to no power. The same is affirmative of His infinity and of His telling the last number, because there is no end or determination of either; since, were there any end, it could not be infinite; and the greatest possible notation of number may be in-

\(^1\) S. Aug. Enchir.

\(^3\) See Maimon. De Naturâ Imposs.
finitely doubled. In a word, whatever God is said not to effect, or to be impossible, proves not any impotence, but rather shows that all His other attributes and perfections are as essential to Him as His Power; and as His power suffers no resistance, so neither do the rest of His perfections admit any repugnance. But, in all events, it is safer to say what He never will do, rather than positively what he cannot do.¹ “Is anything too hard for the Lord?”

Nor is the Almighty more powerful than just and righteous; so as He never does or can abuse His power. Justice and rectitude is His nature. “Shall not the Judge of all the earth do right?”—Shall He not take cognizance of all injustices, vindicating the injured, as the very Fountain of Justice? It was for this the ancients had recourse to the gods in their solemn oaths and appeals, as to whom all must render account of their actions, for the reward or reproof of Him, who only distributes them. Wherefore, it were the greatest defect in so Divine a nature, not to recompense goodness and virtue, and punish wickedness and vice, because it were unjust; and as well might we deny all Providence, and even God Himself, as to deny Him justice. For if He be an intellectual being, he comprehends all possible actions, be they good or bad; the one being agreeable to Him, and nearest to His excellent nature; the other, contradictory and repugnant.

His justice and dealing must needs be accordingly, and thus are all God's attributes chained and linked to each other, never to be sundered. His wisdom shows he cannot be deceived; His omnipotence proves He has no need to deceive; His goodness declares His unwillingness to deceive; and all of them assert his exact and impartial justice.

5. **Truth**:—God has sworn by Himself, because there is none greater; not that it is possible He should be false, but to support our diffidence, and want of faith. For otherwise it is as impossible for God to lie without an oath, as with one.\(^1\) The virtue of His veracity is not fortified by an asseveration of God, as to its being true; but from the nature of God, who cannot equivocate, or dissemble. It is inconsistent with His purity; a contradiction to His integrity; repugnant to His justice, and averse to his goodness, to deliver anything contrary to His certain knowledge; and therefore He cannot wrong any one. His testimony is truth itself; and accordingly, exacts our assent. Truth is the foundation of God's authority, the source of His omnipotence, and the only support and stay of all our confidence.

6. **Goodness, Beneficence, and Love**: God does not govern arbitrarily, upon the sole account of His power and will, but as His will is the will and law of justice and highest reason. Nor does He punish any, but for their good, and to make them better. To conceive rightly of God, is to figure in our minds an existence of all possible goodness, justice, truth, and other divine

---

\(^1\) Hebrews, vi., 18.
virtues, and that all things are in Him as they should be; and the universal system so framed and governed, as nothing could be more perfect, or possibly improved, however things may appear to our shallow comprehension. For as He is the source of all good, so all that He created was good, yea, very good. God, as a free agent, undetermined by anything but His own good pleasure, spreads His goodness and beneficence over all His creatures; and this it is that entitles Him to the universal empire, even above omnipotence itself. His mercy, as David says, is over all His works. Nor, indeed, is there any majesty without goodness. Take away the notion of goodness from God, and none would serve Him, none seek Him sincerely. It is His goodness leads sinners to repentance, and repentance from fear alone is unacceptable. Yet so gracious is God, that He does good even to the evil, as well as to the good; not that they may continue evil, but because He is superabundant in mercy and goodness. All our evil is from ourselves—all that is good in us, from Him.

The whole universe, and the provisions it affords us, and all His creatures, declare His beneficence;¹ and so conspicuous is this attribute, as to be celebrated above all the rest. Indeed, creation is an attribute belonging to God alone; and so is all nature, all substance, good. For God did not create evil, nor its effects, Death and Sin, which are neither nature nor substance, but enemies and foes to both. Evil has no existence, but as an accident fallen unhappily into sub-

¹ See Seneca De Benef.
stance, and has no other being of itself.¹ Nor is it an effect, but defect.² When things, therefore, deflect from goodness, it is chaos, and darkness, and nothing. Now, if there be any other evils in the world, they are so only to our ignorance. For even the deleterious and noxious juices, &c., of plants, repugnant elements, and contrary seasons, are all of them good and profitable to us in time and place, and spring from the fountain of all goodness. If we know not the use of them, it is our ignorance: and if they do us hurt, our own fault. For every thing has two handles, a right one, and a left, a tractable and untractable; and a wise man takes hold of the first.³ God has not hid and concealed these things out of envy and want of goodness, but to exercise our reason, incite our industry, and excite our devotion. They, therefore, infinitely dishonour Him, who deny God philanthropy,⁴ whereas God is all goodness and love; the most illustrious proof of which (till we come to speak of the work of His redemption) is His

7. Providence; by which He operates insensibly and imperceptibly; which shows the spirituality of His being, penetrating all things. However events seem to us, we should never cease to admire and praise God,⁵

¹ Evil is an omission of good, and has nothing solid and real, but as it may be of kindred to that, indeed, of which God made the world, namely, nothing, as tending to nothing.

² Plato In Timæo. Plotinus, &c.

³ Πάν πράγμα δύο ἔχει λαβᾶς.

⁴ Hobbs.

⁵ Πάντα θαυμάζειν, πάντα ἐπαινεῖν, πάντα ἀνεξαντιτός ἄποδέχεσθαι, τὰ τῆς προοιμίας ἔργα, καν γραινεθαι πόλλοις ἁδικα, διὰ τὸ ἀγνωστὸν εἶναι, κ.τ.λ.—Damas. De C. F., ii., 29.
being sure there is both a just and reasonable cause, though to us for the present undiscernible. In the mean time, He ceases not to take care of every accident, that every thing proceed without the least interruption, in order to the whole. This care over His works, so extensive as not a sparrow lights on the ground, not a hair of our head falls without His observance and permission; even things without reason participating, as well as mankind, in the method of the Almighty's Providence, proceeding in order to the good and preservation of the whole. Yea, and the most contrary things He makes to be useful; so as he who denies Providence, denies and affronts God.

It is plainly stupendous, that any person to whom God has given a rational soul, and faculties to consider and distinguish, should at any time cast his eyes upon even the least work of Nature, without at the same time lifting them up in admiration at the wise order, economy, and disposition of its several objects. In short, and to sum up all, (because we have already largely discussed this matter in the former chapter) God did by His divine and eternal counsel purpose to create a world, which He has formed by the most perfect idea He had designed, and to support and preserve and keep up the compages by a powerful influx and perpetual emanation; governing all by such laws and ordinances, methods and motives, as they observe and subsist by; the several courses and periods of the celestial bodies; the influences, actions, and vicissitudes of generation and corruption in terrestrial bodies;
various affections and alterations of them; sensible perfections of some creatures; instincts of other animals; rational and free agents, from the smallest insect to mankind; and all these to be by standing ordinances and invariable decrees and rules; God foreseeing all possible events, that there needed no repairs or further supplement of any of His acts, or, as is necessary to human laws and establishments, by reason of their imperfection. For thus, by His particular Providence, every minute thing has been considered,—by his general care, the whole; especially by Divine laws and institutes extends He His providence over men and angels, in relation to their eternal condition; as shall be shown, when we come to speak of the dictates of those oracles which declare the work of man's redemption. In the mean time, the wretched meanness and unworthiness of man renders his intercourse with God the more admirable, but not incredible. The sun illuminates the lower world, the humble valleys, obscure recesses, without any diminution of his glory or stopping of his career. So God acts on the least dust He has made, the most despicable worm that crawls, without trouble, as the soul in the body; or, like the centre of a circle, that receives all the lines drawn from it, though extended to every part, without the least confusion; ever by one single motion and energy governing all other motions, without the least toil or labour. And this He does every moment, without any diminution to His majesty, from the inconsiderableness of the subject, as to our appearance; on the contrary, the exility of the
creature and workmanship heightens the skill and excellence of the artist.

And nothing more clearly shows the immense power of the Almighty, than to consider how a lump of clay and dust should contain a mind that knows itself and so many other things. Nothing more celebrates His wisdom, than to see how He foresees all actions ere they are done, and brings to pass good out of evil. Nothing so much His justice, as His universally condemning the crime, even before it be perpetrated; knowing the intentions of our hearts, and the motions of all men's thoughts: so as no distance of place, or darkness, can hide from His all-seeing eye, who observes all, suffers all, that He may reward and punish all accordingly, and do all this to the best end. We cannot, therefore, think of God, but as of a being most perfect and honourable. Such a being can have no obliquity, no defect—can do nothing unworthy of His nature. Nor has He any need, as men have, for political concerns, to proceed by indirect courses to accomplish any of His glorious works or purposes, being Himself Almighty in power, wisdom, and righteousness.

8. Omnipresence: for how should God else provide for the necessities of such a household of things, places, and persons, so far and remote? In which nothing more resembles Him than light or air, which insinuates itself, and pervades the most distant and obscure recesses. Nothing in nature can subsist one moment without His actual presence. For thus, in all places and at all times, He hears our prayers, takes notice of
our actions, yea, knows our most secret thoughts, before they discover themselves. He sees all that He has made in their causes, whilst we frail creatures distinguish by parcels. In a word, He looks on all the world but as one house. From this omnipresence of God results His

9. **Knowledge.** He who has power infinite has knowledge so likewise. How else should He comprehend the use and exercise of His infinite power, wisdom, providence, and other attributes? Universal, therefore, is His knowledge, from the highest heaven to the lowest centre, from the greatest magnitude to the minutest grain of sand. And so likewise (as we have said) of goodness and beneficence, justice, and all other virtues, which in the best of men are but shadows and little drops; for the infiniteness of His power and understanding would, without these, bring confusion instead of order, and destruction instead of conservation.¹ Without knowledge, He could not be wise; but that He is

10. **Wisdom** itself, all His actions and works declare. For by wisdom He made the world, and has maintained it ever since. Indeed there is, to say truth, no wisdom but God's. All the wisdom and knowledge in the world is but stark folly, in comparison with His. And what we know, we know but in part; and that little scantling, whereby we excel other creatures, is but a ray

¹ Upon this account, Thales, Pythagoras, Plato, Epictetus, and the rest, have concluded Him to be a sweet and noble mind; Zenophantes and Clearchus, the highest reason.
from Him, a small gleam from this Fountain of Light. Man understands by reasoning, and loves by passion, and when all is done, with never so much labour and industry, it is full of irregularity, doubts, and obnoxious to mistakes. But God is infallible, reasonable, comprehensive, pure; in Him is all light, and no darkness at all. To fancy a God without wisdom and knowledge is to figure him a stock, not a God. Whatever is the first cause knows all the effects of that cause, and so successively all other causes eternally: namely, the ideas of all existences, events, and accidents: times past, present, and future, as being all of them in the Divine mind, that infinite abyss of understanding; in the full contemplation whereof is the beatific vision of God Himself. 1 All things, which we see and know, have their existence for some end. None whatever have such a being for the same end. Of that there must be thought a cause; and a final cause is no otherwise the cause of anything, than as it moves the efficient cause to work. Whence we cannot but collect the prime efficient cause of all things to be endued with the most consummate wisdom, which has a full comprehension of the ends and events of all designs, productions, and disposal of all things to those ends. So as, whatever has its operation to some end, must be directed to it by some means; which though man can make choice of, proportionable for the obtaining of it, yet other natural agents, proceeding from mere instinct, cannot do so. The water never deliberates whether it shall wet, nor

1 S. Aug. de Civ. Dei, l. 12, c. 18.
the fire whether it shall burn and consume; nor does a root consult whether it shall spring or wither; nor use we ourselves any deliberation in natural actions, without which we yet cannot subsist a single moment. The motion of the heart, the circulation of the blood, distribution of nourishment, perform their several functions after we have eaten and drunk, to these ends, not as we, but as God has ordained them; yet are they all directed to their proper ends, and that with the greatest reason, and, therefore, greater wisdom, than ever flowed from any thing save God, and His power, wisdom, and knowledge, who is the Director to those ends, and for which He gave them beings.¹

11. Immutable. Now, so perfect and complicate are all these God's attributes, that there needs no addition; and therefore He is Immutable, without change, or so much as shadow of change, either in His nature, works, or resolutions. There are some bold men who question, nay, deny God's prescience and foreknowledge of human actions, as inconsistent with His liberty. For, say they, if man's actions be free, then are they unforeknown, as having no necessary cause; whereas, it is certain that prescience does not destroy men's wills, or impose necessity on them; nor are their actions therefore future, because foreknown, but quite the contrary. God, in a sense of perfection, is of all the freest agent; nor is contingent liberty denied to Him; but it is rather one of the privileges of God, to be devoid of free choice

¹ Ecclus., iv., 11, 12, 17, 18, 19; Wisd., vii., 22, 23, 24, 29—viii., 1, 4, 7, 8, 9, 17, 18, 21.
and judgment, as it implies imperfection, that is, all imperfection, peccability, or the least appearance of real change. He is ever pleased with the same, who can delight in nothing but what is best. Nothing can diminish His power or liberty: nothing but His own natural perfection can dispose Him to any thing. In sum, nothing which already is consummately excellent can change to better, nor any wise being for a worse. All change proceeding from ignorance and folly, weakness and lassitude, and change would impair our love, confidence, and even fear of God Himself. To conclude, God being infinite in power, can do all things; and of infinite wisdom best disposes of all things, and has appointed to everything its limit, or left them a dispositive ability of their own concerns. And some things He will have governed by a law of necessity, others of contingency, at least in respect of our understanding how things happen. For nothing of all this falls out, but He foresees it and has decreed it, and therefore it is no derogation of His power. Nor yet is all this by distinct acts, or peculiar attributes, in reference to God, but only in relation to our capacity. Nor discovers it the least mutability in the Divine counsels. For His prescience is not the necessary cause of contingency or necessity; but therefore God foreknows them, because they shall so happen. Nor by this is His power restrained, that is, by either necessity or contingency, seeing whatever He determined

1 Statuerunt quae non mutarunt, nec unquam primi consilii Deos penitet.—Sen. de Ben.
was and is, so as nothing can be more just, or more excellent. And being still a free agent, He can and does alter things as to our understanding, though himself remain unsteady and unmoved. When God alters His dealings with men, according as they persist or fall, and defect from their duty, it is not from His mutability, but rather from His unchangeable justice and wisdom, which are ever the same.

Having asserted all these incommunicable perfections in the Godhead, I shall not need to mention any distinct one of His holiness, they being all of them so many parts of it, so as the nearer we come to any one of them, in conformity of our life, that is, imitating His justice, charity, wisdom, goodness, and truth, and all other Divine virtues, the more we shall resemble His holiness, who has said, Be ye holy, for I am holy, and that without holiness no man shall see the Lord.¹

PART II.—TRINITY.

Now, as to the mystery of the sacred trinity, whereby God is by us Christians acknowledged to be One in essence, and of Three Persons, of which more in its proper place. The sun in the firmament is but one, and yet the fountain of light and heat; three distinct things, yet operating all at the same instant. The rational soul has three distinct powers—memory, understanding, will. Why may not there be three Hypostases in three Subsistences? They are indeed obscure

¹ I. Pet. 1., 16; Heb., xii, 14.
resemblances, inasmuch as heat, light, memory, &c., are not the same thing with the sun or soul, but only emanations from them. But as these subjects are Divine, the manner is wholly incomprehensible. And if we be not capable of understanding things belonging to ourselves, as men, (such as is the union of our soul and body) how shall we ever hope to comprehend a mystery of so sublime a nature? Indeed, though it be unintelligible, Reason cannot pronounce it impossible; seeing that the Divine essence is not of the same nature as created substances. For though in the whole work of God there be no instance like to it, but that one and the same nature is always united in one substance; yet it is not consequent that the Divine nature may not subsist in three persons, however inconceivable to us, as not indeed falling under our sense.

That though the Divinity be as to His nature One in essence, yet that He is Three in Hypostasis we believe, not from anything our reason dictates, but from the word of God; and therefore by an act of pure faith: nor discovered to the world by any light of nature, but supernaturally revealed in time, and necessarily since revealed, to be believed. As to those explanations of councils and creeds, they have been piously set forth, and endeavoured to unfold, rather for peace-sake, and to silence all nice and eternal controversies, the falling into errors, as of those who held three Gods, or totally denied a Trinity of persons, than out of any confidence of being able to describe the mystery in all its profound dimensions. That which is therefore to be believed
and professed by us, is that God the Father, God the Son, and God the Holy Ghost, is but one God; so as the Son is not the Father, nor the Spirit the Son, but distinct persons, through a certain propriety, competent to no being else. Farther than this, we are not able to inquire, but humbly, modestly, and soberly, acquiesce in what God has sealed up, and will have kept a secret.

This order yet we may find, that the Father is first; secondly, of Him, the Son; thirdly, the Holy Ghost of both; as being so in order of Nature. The Father begetting; the Son begotten; the Holy Ghost proceeding, to use the terms of Scripture:¹ Where, notwithstanding, we sometimes find one of the Persons proposed before the other upon occasion. But nowhere is the Sacred Trinity so conspicuously set forth as at the Baptism² of the Son. Moreover, the Holy Scriptures distinguish the Persons (not essentially, indeed, but hypothetically) as we have already observed; where the Holy Spirit’s proceeding is not to be understood as produced, as some have pretended, but so as God the Father is of Himself, the Son is of the Father, and the Holy Ghost from Father and Son, co-equal, and co-eternal. To the Father is attributed the work of Creation; to the Son, the work of redemption; to the Holy Ghost, Sanctification. Not as if these three distinct offices did aught detract from the Deity; but for our better comprehension of their several parts, or opera-

¹ See I. Cor., xii., 4, 5, 6; II. Cor., xiii., 14; Gal., i., 3.
tions. For all is from the Father, who made the world by His Son, the Spirit of both co-operating. Farther than this is rashness to go. We must admire and adore, but cannot hope to comprehend. It is a depth into which councils, and fathers, and churches, and the greatest wits, have fallen, and even lost themselves. God will be believed, not examined. It is, besides, a mystery, which no ways falls under the criterion of our senses even the most sagacious; whilst of no corporeal substance, (of which we may presume to judge, and are enjoined to do so, before we give assent) we are to reserve it for that blessed time, when we shall see God face to face, and as He is. It is sufficient, that here we know Him by His works in the Creation, His Word in Holy Scripture, in our souls and consciences by the light of nature and reason. But, as for this of the Holy Trinity and work of our redemption, and how He operates in the hearts of the faithful, their vocation, regeneration, justification, &c., we know nothing, but by the light of grace. It is enough as to the mystery, that whatsoever is predicated of God is God. Why should we pry into what the angels dare not look into, but cover their modest faces, whilst they sing Thrice Holy to the Thrice Holy Trinity? The Apostles asked not Christ; the Son has not revealed it; the Father conceals it, because we could not in this imperfect state comprehend it. We behold the majesty; we see not into the mystery. We know that God is, and what He is, namely, that He is a spirit, holy, just, good, wise,

1 See I. Cor., viii., 6; Hebr., i., 2; S. John, x., 30.
omniscient, omnipresent, omnipotent, immutable, and eternal; but we know not His substance.¹

By the Christian Trinity we mean not the mere names, or a Trinity of words and logical notions only, but of persons, *apposita*, and *Hypostases*. The Uncreated, One True God, Blessed for ever, whose attributes of Incorporiety, Spirituality, Invisibility, Immateriality, Simplicity, Infinity, Eternity, Omnipotency, Omnipresence, Omniscience, Wisdom, Knowledge, Justice, Veracity, Immutability, Providence, and universal Perfections, are all but one simple, formal Act in God, distinguished thus for our comprehension only, some whereof are communicable in an inferior manner to the Creature, others wholly incommunicable, proper to God alone. And this is what we are allowed to look into and to gather of the existence and nature of God, both from His works and out of His Word, where we are taught to adore His Divine perfections in other mysteries, without dispute, which had all men learned, and done in simplicity, they had been more knowing and more happy; whilst there is nothing more becoming our Christian profession, or, indeed, as we are men, than an humble acknowledgment of our imbecility

¹ The Platonists had an obscure notion of a certain universal Psyche, or Holy Spirit, as S. Cyprian thought. The Chaldeans taught something of a Trinity. Plato also held that the *Monas* was the universal principle, which produced the duality, or matter for it to work upon. What the ancient poets and the philosophers Zoroaster, Trismegistus, &c., intimated by their *Trias*, may be seen in Origen against Celsus.
and limited faculties, to grapple with such stupendous mysteries.

We are likewise cautioned not to conceive of the Divine properties and attributes as proceeding by way of emanation out of one another, as frequently we understand some of them in the creature; but, as we have all along suggested, that whatever is said of them, as of God, are God Himself, one pure act, without confusion, or relation to time, flux, successive proceeding. But whether we consider them negatively removing impotence, imperfection, plurality, causes, accidents, &c., or positively, by the works God has made, we must conclude Him to be the most transcendentally perfect and noble Being, and acknowledge that we can never reach an intuition of His being, which is impervestigable and past finding out. We may celebrate His praises, and do Him homage, and best speak of his excellencies, by our silent admiration, since no words of man or angel can worthily express Him. He cannot be seen by our bodily eyes, or fathomed and comprehended by our weak conceptions. In a word, who thinks to comprehend the majesty of God, diminishes it, and shall be oppressed with its glory.

More useful, therefore, and profitable were it for us to know how to live well, and please this great and infinite God, than over-curiously to pry into these profound abysses, lest, our heads growing giddy, we fall, and drop into amazing depths, and be reproved. Let us look upon His works, and into His Word, and labour

1 Min. Felix Octav.
to know Jesus Christ and Him crucified. It is more necessary to skill how to plough and sow, to eat and drink, than to know by what secret of nature and secret operations corn grows, and food does nourish us. He who fancies he can unriddle the Divine mystery, undervalues it; and he that would not undervalue it, must acknowledge it exceeds his comprehension. To conclude, then, after all we have said of God's attributes, we are not to receive them as names of essences, but of actions. Nor as if His existence were compounded of divers ingredients, things, or qualities: those which are attributed by way of negation, are real attributes; whilst affirmative properties are not applicable. We may better say what they are not, than what positively they be; but as to their quiddity, our knowledge is ignorance, and so unsafe it is to multiply affirmative attributes, that, as Maimonides says, we should stay till one of the Great Synagogue take the chair, and (as Evagrius) be tender of definitions, which, being conversant about things concrete only, have nothing to do with things abstracted. To sum up all: though Almighty God be but one, yet are all our faculties too narrow to contain it; none but His own uncreated nature, which is incomprehensible, can comprehend it. We see and know Him only by reflected light; therefore, the more humble our contemplations of Him are, the nearer we shall come to Him; and the nearer we approach Him, the more shall we discern, and be amazed at, His endless perfections. For His ways are unsearchable, and His glorious essence past finding out.
And yet, though we cannot attain this desirable knowledge of Him here, there is so much to be learned, as is of infinite use, and absolutely necessary to our everlasting happiness, and preferable to all other sciences whatsoever. There is a congenitely connatural relation between the object of a Deity and a created intellect; and even between this incommensurable Being and our souls, which discovers its excellency, and from whence it is derived. For some knowledge of God is so essential to our felicity, that, albeit we cannot comprehend and know Him in His transcendent and incommunicable perfections, yet has He been graciously pleased to unfold so much of Himself as it is fit for us to know, and as we can possibly contain through the veil of our flesh, lest, by a more immediate intuition, we should be struck blind, and oppressed with its brightness.

And highly it concerns us to know Him, because He is our Creator, Father, Benefactor, and Saviour—our Supreme Good, and Ultimate End; from whom we receive all we know, all we have, and all we hope for. By Him it is we expect a glorious and eternal being hereafter. And these, His excellencies, none can know and seriously consider, but it must create and excite in him (though a Heathen) a moral necessity of loving, adoring, imitating, and serving Him, by all those virtuous habits and capacities which may render him most like to the Divine Being, whom so to know is life eternal and consummate happiness.
SECTION II. OF ANGELS AND MINISTERING SPIRITS.

I. THEIR NATURE.

Come we to what is next in the order of beings, namely, Angels and Spirits, and to souls intellectual; all of them separate substances, different from matter, and objects of our senses; the nearest both in existence and attributes, honour, and alliance to God, the first and most excellent of beings. We begin with Angels and Spirits, created and sent forth to attend on the God who created them,¹ and to minister to His other works, especially to man, who is in the next rank of His creatures, and though inferior to the excellency of their nature, is no way so by the dignity of his relation, as we shall come to show, when we speak of the man, Christ Jesus, who took² not the nature of angels on Him, but the seed of Abraham, and was and is Incarnate God.

Angels are Spirits, and immaterial substances, made to glorify God and perform His service, both in heaven, their mansions above, and in the inferior world. That such there are is not to be denied. For, if whatever appears besides the nature of corporeal beings, be not the actions and effects of separate souls, it must of necessity be of some other spirits, which did never animate bodies; by the ancients called Intelligences, for their excellent knowledge; creatures of a higher class and degree than those who have animated bodies, such as the souls of men. Nor is it to be doubted but that

¹ Hebr., i., 14. ² Hebr. ii., 16.
there are degrees in the rank of beings, which, bordering on the extremes of some middle natures, compose that harmony in the Universe: showing that there are no abrupt and precipitant transitions from one extreme to another, but by sweet and intermediate degrees, as may be instanced in all the elements and things of nature. Thus, we find even some stones in a manner vegetable, and plants after a sort sensible, and, as it were, animal; and some animals among the brutes approaching very nearly to man himself, so extraordinary is their instinct, as to partake of reason; and among men, some are of those rare and incomparable endowments, as seem on the confines of Spirits. All of them participating of two natures, that above, and that beneath, taking hands, as it were. And thus does Man stand between Body and Spirit; Angels, between the souls and spirits of men, and some Being superior to their own nature, which is the God who created them.

As there are, then, bodies without spirits, so are there certain Spirits without bodies, which, though not seen by outward eyes, are yet sufficiently manifest by their effects; not like human souls, according to nature, but sometimes even contrary to it. Intellectual, pure, immaterial minds, who see and are not seen, hear and are not heard, feel, and are not perceived, rejoice, and are (haply) grieved with the sons of men, and in this come near our rational natures. They are not gene-

1 Atque his quidem gradibus, a præstantissimus ad infima paulatim pervenit natura, ordineque descendit. Max. Tyr. Diss. 14; De Deo Soc.
rated, nor do they multiply, yet are innumerable. They die not, nor do they change, because their essence is indissipable, their substance incorporeal, as is evident by their penetrative faculty, endowed with wonderful strength, agility, knowledge, and vast experience. Great, yet not infinite; powerful, not omnipotent; intelligent, not omniscient; nor know they God's decrees, nor future contingencies, no, nor the thoughts of our hearts, nor of one another, farther than what is revealed; nor, though exceedingly glorious, (I speak of the good angels, for there are also bad angels, who have lost some of these privileges) yet not so pure and transcendently bright, but that they veil their faces at His presence, whose eyes are ten thousand times brighter than the meridian sun.

That they discourse with one another is no doubt: how they do it, school-men are not agreed. The Apostle speaks of the tongue of angels,¹ and in his rapt,² that he heard things unutterable. They sang glory to God, and on earth peace, good-will, towards men, at our Saviour's birth. But by what organs, or intuition, rather, they converse, is too subtle for us to find: though that they do discourse, none, I think, do question. For had they not some way to understand one another, they should not have those perfections which are suitable to their natures. That they see and know all things in God, is but conjecture, nor is it much material to our subject; whilst the curious may

¹ I. Cor., xiii., 1.  
² II. Cor., xii., 4.
consult the learned, who have largely handled this difficulty.  

We have mentioned the probable opinion of intermediate substances, not as anything new, or of Divine revelation; but as comparing superior with inferior things in mutual concatenation. Nor has this been unthought of by not only Plato and his followers, but asserted by divers learned among the Christian writers. The Prince of the Peripatetics, Aristotle, speaks plainly of their several natures. But, as we are taught in Christian philosophy, the angels, having been educed out of nothing, are reducible to it again by the power which raised them, though, doubtless, that power shall never be put into act. In the mean time, and once for all, whenever we call God a Spirit, it is to signify by that name that He is no body, magnitude, or matter, but the Omnipotent Creator of both body and spirit, to do with them as He pleases, who is of a nature inconceivably above all beings—a pure and simple act. And therefore angels, though spirits, are from that, and have many other defects, so infinitely short of the nature and essence of God, that albeit, in respect of man, they

1 Consult Aquinas; Prosper Epist. ad Demet.; and of the Fathers, Ambrose, Theodoret, Chrys., Hom. 22, &c.
2 M. Felix, Tertullian, Lactantius, &c.
3 As, firstly, things invisible, viz., intelligences, of the upper rank. Secondly, things visible, viz., all the furniture of the aspectable world. Thirdly, substances participating of both: certain incorporeal existences, perdurable and impassive principles, as to common mortality.
are truly spirits, in comparison of God, they may be said to be but bodies.

Whether these glorious creatures, refined as they are, are totally devoid of matter, has been so great a question, that Origen will have nothing to exist without it, save God alone; and yet affirms not that angels are bodies, but in body; nor does the great St. Augustine speak much otherwise, not to say Tertullian, who had so slender comprehension, how anything could be altogether incorporeal, as hardly to exempt the Deity itself. They generally held that, at the Resurrection, the Saints should be qualified as the bodies of angels, whilst the Sadducees would not admit of any substance between the Deity and sensible matter;¹ and by consequence that none of the Prophets and holy men were divinely inspired, accounting their writings merely the productions of human wisdom.

II. OF THEIR NAME.²

Of the name, dignity, office, and abode, something yet remains, as well as of their creation; which most divines have assigned to the fourth day's work; making them coeious with the eldest daughter of the Almighty fiat, Light, when all the sons of God shouted for joy, and the morning stars sung their Creator's hymn. Others deduce it (not improbably) some time before even the

¹ Thus Origen is said to have made the Deity corporeal, with the Anthropomorphites; but it was a calumny, and is refuted in his book περὶ ἀρχῶν, and in the eight contra Celsum.
² See Aug. de Civ. Dei, lib. xi., c. 9; Psalm civ., 4; Col., i., 16.
Genesis of the world; but of this, opinions are so various, that to recite them would be tedious.

The name, seldom or rarely used in Heathen authors till they conversed with Christians, includes its office, and has in sacred writings several acceptations; sometimes for created, sometimes for uncreated beings, especially in the Old Testament, where we have not only the son of God, but the whole Trinity\(^1\) entertained as angels; not to speak of such\(^2\) as have been sent to preach the Word of God, but of those who (as their names implied) have been despatched immediately from Heaven upon errands of high importance; such as appeared to David, Daniel, the Blessed Virgin, St. Peter, and other holy persons, commonly in the shape of young and beautiful men; seldom or never in hideous and brutish forms. For we speak not here of devils, who, though spirits of darkness, do often change themselves into angels of light, by God's permission.

Of their nature, we have already spoken, where we have showed them to be intuitive spirits, immaterial, profoundly knowing, powerful, and immortal, as void of all physical composition. The name and notion of intelligences we have from Aristotle; Daimones from their deep intuition, at least of natural things and their effects. In a word, (says Minutius) *Poetæ*\(^3\) *sciunt phi-

---

1 Conf. Heb., xiii., 2; Gen., xviii., 3; xix., 2.
2 As the angels and bishops of the churches, Rev., i., 20.
3 "Poets pretend to know, philosophers disagree, Socrates knew personally, and either shunned or sought things, at the beck and will of a Daimon constantly attending him."
losophi differunt, Socrates novit, qui ad nutum et arbitrium assidentis sibi daemonis, vel declinabat negotia, vel petebat. Whilst every man was thought to have his tutelar, his good or bad angel: Hermes, of old, Lactantius,¹ and others, asserting the protection of one good spirit to the good, and that in no wise did an evil spirit attend the good man; and that it was a good spirit which so constantly accompanied Socrates, as in our times Cardan, and haply friend Boyle.²

III. DIGNITY.

Touching the rank and dignity of this bright hierarchy, Dionysius makes three classes, and to every one as many. 1. Cherubim, seraphim, thrones; 2. Dominations, powers, virtues; 3. Principalities, archangels, angels. But of these, since none are certain from an uncertain and suspected author, we may suspend our belief, whilst we find not above four reckoned by the apostle;³ and whether they signified different orders, St. Augustine⁴ confesses himself to be ignorant. In the mean time, those of the seven first the Rabbins have named Oculos Dei, the eyes of God, from their extraordinary sagacity;⁵ and we argue a distinction

¹ Lact. de Orig. Error.
² For what the ancients held on this, the curious may consult Hierocles, Max. Tyr., Proclus, Plotinus, Platonists, &c.
³ Col. i., 16; Eph., i., 21.
⁴ S. Aug. in Enchir: "Fateor me ista ignorare."
from that expression, "above all principality,"1 &c., taken, doubtless, from the names of dignities of the Persian empire, accommodated to their degrees.

IV. ABODE.

As to their abode, being spirits, it is uncircumscribed. Philo places not only Evil, but the Blessed Spirits, among the elements. There are, says he, in the aër an holy company of unbodied souls, called angels, not confined to any definite place, filling sometimes a larger, sometimes a lesser space; nothing remaining empty which God has made. And some of these they will have of a fiery, others of aerial substance; and have, accordingly the names of cherubim, seraphim, &c., fitted to their ministry of governing orbs, constellations, elements, kingdoms, plants, animals, especially man, by those θεοῦ παύσας καὶ φίλους, the sons and friends of God, as Maximus Tyrius calls them. They attributed the fierce and fiery nature to the archangel Michael; to Gabriel the watery, as the more gentle and benign. That the first flies with but one wing, slowly, the other with both, to note God's unwillingness to punish, and readiness to pardon. These are rabbinical fancies: whilst the Gnostics held that most diseases were infernal spirits, and only curable by charms, and incantations, and downright blows; for so, we are told,2 Apollonius Thyanaeus caused a miserable old beggar to be stoned to death, at Ephesus, persuaded by that impudent impostor that the poor creature was the demon who

1 Eph., i., 21.  
scattered the plague about that famous city, then infected with it. Indeed, two learned physicians, Sennertus and Fernelius,¹ believed they acted on human bodies, especially in lunacies, agues, and the falling sickness, and that they might be of different species, according to their operations and assignments; some appointed to protect, others to chastise. For it was not from the Jews only that every man had his guardian, as we showed the universal belief. And we have it from our Blessed Lord,² that even children had them, too. Satan could apply a text of Scripture to the same sense, though with malicious purpose, when he would have had our Saviour precipitate Himself from a pinnacle of the Temple, upon that presumption.

V. OFFICE.

Doubtless, their office is to stand before the throne, singing *Tris-hagion*—Thrice-Holy—to their glorious Maker, Head, and Establisher, the Holy Jesus. So to execute His commands, they pitch their tents about us; they are a wall of fire around us; they ascend and descend continually for us, either to carry up our prayers to God, or bring down blessings from Him; and with unseen but efficacious help defend us from innumerable mischiefs. By these was Hagar comforted, Abraham directed, Isaac saved from sacrifice, Jacob conducted.

¹ [Daniel Sennertus introduced the study of chemistry into the university of Wittenberg, (A.D. 1598) held that the souls of brutes were not material.—John Fernelius, Physician to Henry II., King of France, born towards the close of the fifteenth century.]

² St. Matt., xviii., 10.
By these was Lot rescued from the conflagration of filthy Sodom; by these were the children of Israel delivered out of Egypt; Elias protected; Sennacherib’s mighty host slain. By these He protects whole empires, withstands false prophets, guards our persons, delivers out of prisons. They repel the rage of fire; they shut the mouths of lions; warn us of dangers; guide us in our ways; are witnesses of our actions; contribute to and rejoice at our conversion; and do us a thousand good offices. What shall I say more, O, Blessed Spirits! For the time would fail to mention and to celebrate the services we receive from you, who desert us not in perils, nor forsake us in death itself, transferring our souls into Abraham’s bosom. Happy, thrice happy spirits, ambassadors of the happiest message that was ever brought from Heaven to earth, “Glory to God on high, on earth peace, good will towards men;” when ye came with those blessed tidings, “Behold a Virgin shall be with child, and shall bring forth a Son, and they shall call his name Emmanuel;” which, being interpreted, is, God with us; and if God be with us, who can be against us? or if any be, who can hurt us?

Hail, then, all hail, ye glorious beings, angels of light and bliss, who, persisting in your original perfection and unstained loyalty, have been ever faithful to your King; who, always beholding His resplendent face, delight to do His will; who, wrestling with us for blessings, suffer yourselves to be overcome;¹ who descending

¹ See Gen., xix., 16—xxxii. 1; Ps. xci., 11, 12; S. Luke, xvi., 22—xv., 7; Heb., i., 14; S. John, v., 4.
into the troubled waters, render them salutary, and make all our affections conformable. With infinite satisfaction do you behold us poor creatures strive to imitate your obedience, and, for the love ye bear to the honour of our common Creator, cheerfully submit to the meanest charge, taking even little children into your protection. Celestial courtiers, Divine heralds, how are we obliged to you! You annunciated that sweet name; you ministered to the fainting Saviour in the Wilderness; you comforted the agonizing Jesus in the garden; you proclaimed the Resurrection; you carry our souls into rest, and shall, at the Last Day, gather our scattered dust from the four corners of the earth; when the trumpet shall sound, and the graves shall open, and the dead arise, and the voice of the Archangel shall be heard to sing "Holy, Holy, Holy, Lord God Almighty, Heaven and earth are full of the majesty of thy glory! To Thee all angels cry aloud, the heavens, and all the powers therein: to Thee cherubim and seraphim continually do cry," and we Thy poor creatures with them, under their feet. They to praise and glorify Thee for Thy glory and benefits: we to adore and pray unto Thee for ourselves, that we, their fellow-servants, may be happy with them, behold the fair beauty of the Lord, and worship in His Holy Temple. They are present, says St. Bernard, _non modo tecum sed etiam pro te_, not only with Thee, but for Thee; delegated and sent forth to take care of such as shall be heirs of salvation; intimated by

1 I. Thess., iv., 14-16; Ps. cxlviii., 2.
their ascending and descending on Jacob's ladder, to denote the continual Providence of God.

But what the Almighty's especial vigilance is over the greater societies of men, kingdoms, and commonwealths, yea, and over whole nature, rolling the wheels of their destiny, see (amongst others) Clemens, Alexandrinus, Tertullian, and Origen. In short, so constantly were they employed, that the ancient Jews affirmed that God never spake to mortals (Moses only excepted) but by the voice of angels. Not that God employs these powerful ministers, as if the government of the world were a molestation, or any drudgery to His omnipotent and omnipresent nature; but for the glory of His majesty, and to communicate to His creatures of His goodness and bounty, by intermediate beings, who continually behold His face, contemplate and adore those perfections, which He diffuses on us by them.

Not to multiply beings, therefore; that there are such beings and spirits we nothing doubt, seeing none of those other beings among the creatures are able to effect any thing of great and illustrious, but what concerns the body and the preservation of themselves. They know not many things belonging to their own interior functions, involuntary actions, and the like, (I speak here of man, the nearest in knowledge and perfection to angels) much less can they command the elements, inflict diseases, change the seasons, and by unseen hands protect their friends, or shield themselves

1 Tertull. de Baptis. 2 Orig. Hom., 82, in Gen.
from a thousand accidents. Nothing but some supreme virtue, above all matter, and of a higher orb, could do any thing of this; though, when all is done, they can do no more than is given them from some being superior even to them, who in respect to Him are as nothing. Something or other is deficient in all beings to make them perfect: therefore, there is a being above them, consummato, and wanting nothing. All numbers commence at one—all effects proceed from One, who is the prime and first cause, the spring and fountain of all other subordinate causes and effects, and has therefore right to command and govern all, both angels and men.

But, further, as to the natures of these immortal spirits. The angels were all, at first, created good; but some there were who persisted not in their original state. So as all of them had need of grace to preserve them from defection; and this they had, not from their nature, which we see was lapsable, but from the grace and favour of God, who, foreseeing their perseverance, elected them in Christ, whom he constituted to be the head and mediator, both of angels and men: and by whom they are now confirmed, so as never to fall from this grace, or lose their innocence. Before, it was possible they might have done this, having nothing to compel their will, which was free and unconstrained. I know there are who dispute this, as if this confirmation of their liberty to persist in goodness were a diminution of it; that the angels merited this happiness. But this

1 Coloss., i., 16-20.
reward preceding their obedience, takes off all objections.\(^1\)

Of these, that is some (from among the whole host of immaterial spirits) persisting not in their original perfection, but abusing their excellent faculties, were cast down from their lofty habitations. But upon what occasion, is not so clearly manifest, nor is it absolutely necessary we should know. Some think it was for malice, that God should exalt the nature of man in Christ above them; but their lapse being before that of man, this could not be it. Others, that they sinned against the Holy Ghost; others for disobedience to some certain law peculiar to them, and the like:\(^2\) while the Scriptures seem rather to show us it was their pride and ambition,\(^3\) whether in thought, or act, or both, arrogantly affecting the throne of the Most Highest. Nor was this conspiracy of a few, but of innumerable, who enjoyed, perhaps, their happy state long before this apostacy; nay, and might persist in a course of disobedience and impiety.

For, indeed, the lapsed angels could not be tempted to evil by any above themselves, and therefore was their deflection merely from themselves. It is likely they beheld their natures to be so glorious, so powerful, sublime, knowing, and perfect, that, priding themselves in their own accomplishments and combined strength, they would now no longer depend on their Creator, but envying His omnipotence, made some effort to de-

throne the Almighty. For this ingratitude they were precipitated into the burning lake,\(^1\) confined to their dismal prisons, and bound in chains of darkness.\(^2\) And that these were not a few, nor of the inferior ranks, we conjecture from the various names of them we find in Scripture: Beelzebub, their Prince, Satan, the Devil, the accuser of the brethren, Prince of the World, gods and princes of the age; the Roaring Lion; the Great Dragon, the Serpent, Abaddon, Apollyon, Murderer from the beginning, &c. Of another class are the Demons, Rulers of Darkness, spirits of wickedness, the Tempter, all of them names expressing their nature and monstrous pravity. And as the corruption of the best is always the worst, so these, from the most pure, pious, and excellent, became the most unclean, impious, and execrably wicked. The Manicheans, indeed, held that some angels were created evil, and some of the schoolmen, that they fell of necessity, from that text before quoted, which says that the devil was a murderer from the beginning;\(^3\) but which by no means signifies to that sense, but to the beginning of man's being in the world, not to the creation of angels. Their not standing in their integrity plainly intimating that they were once in it, and stood unshaken for a time. But, though they lost their happy station, and many other perfections, yet did they not their essence, power, and natural faculties altogether; that they might be God's executioners, to revenge himself upon the wickedness of men,

\(^1\) S. Luke, x., 18; II. Pet., ii., 4. \(^2\) S. Jude, 6. 
\(^3\) St. John, viii., 44.
who follow their example, and for trial of good men, who resist the devil's temptations, and live uprightly.

In the mean time, this power of theirs, though very great in the inferior world, where they are sometimes permitted to range and roar about, is so limited, that they cannot so much as enter into a herd of swine, nor create the most despicable vermin, without the express permission of Almighty God, much less do mischief to any man, without His leave.¹ A se ipso, says Gregory, libidinem nocendi habet, sed à Domino potestatem.² The miracles which he seems to do, are lying ones, wonders, not true miracles. He may effect some things besides the order of some particular nature, through his great experience and knowledge of actives and passives, but nothing besides the order of universal nature, established in the Creation. He has, indeed, craft to seduce; is the father of lies and calumnies; exerts his malice, and seeks, with all his might, to bring men into the same condemnation; and, since he cannot invade the throne of God, levels all his spite against his creatures, and would confound the whole Creation at once, were it in his power.³ And, therefore, that he may provoke God against mankind, he sets upon us with all his arts and stratagems, injecting the horridest suggestions, blinding men's eyes, enkindling lusts, provoking to wrath, murders, theft, and all manner of abominations leading to

¹ Job., 1.
² "Of himself he hath the desire to harm us, but from God the power."
perdition. Being themselves without hope, they would drive all others to despair, employing all their force and serpentine craft, by temptations to pride, ambition, revenge and hypocrisy, sins which cast themselves out of heaven, deceiving the world with their impudent oracles, false prophets, impostures, and abominable idolatry. He exerts his devilish power by sometimes inflicting diseases, poisoning the air, raising tempests, subverting and submerging houses, cities, and whole countries—blasting the fruits and product of the earth; and sometimes, again, for his ends, may, perhaps, by his magic spells, and to create an opinion in men of his power and virtue, prescribe a healing medicine, direct to hidden treasure, or take it from another man, to enrich his worshipper; nay, tell some truths, not for truth's sake, but to gain himself credit, when he tells a lie.¹ For so he can change himself into the shape of an angel of light, exquisitely qualified to do mischief either way; nor this in vain, from the fruit of his first fatal and crafty suggestions, ruiving (as far as in him lay) the whole race of mankind, and having been the author of all those evils and calamities the world has groaned under ever since.

The effects of these insinuations have created an opinion in some men, that the nature of these spirits is not altogether immaterial, but that there are an inferior sort, who, though they lived many ages, did in tract of time decay and cease. Famous, we know, is the story of the dead Pan, about the time of the silence of the

¹ II. Cor., xi., 14.
Delphic oracle:¹ and some from that text in Jude, mentioning the "first estate" which the angels lost, fancy that with it they also lost their celestial natures, as well as habitations; and becoming more incrassated, were thereby possible, obnoxious to a kind of dissolution, and penetrable by that fire prepared for the devil and his angels. Thus being between mortal and immortal, they held that they enticed men, stirring up the humours of the body, the irascible and concupiscible appetites, to pervert their morals; the vices of the mind following the constitution of the body, where grace and the special goodness of God does not prevent it.

We have showed how they seduced the world by their pretended oracles, uttering voices and dark responses, by their enthusiast priestesses and Tripods; sometimes by the entrails of animals, the flight of birds, &c. These were the lemures, satyrs, elfs, lares, nymphs, the manes and inferiæ of the seduced Pagan world, and who were to be appeased by bloody and beastly sacrifices. Such the Empusa,² that of old appeared at

¹ [Plutarch relates this story (Περὶ τῶν ἐκλειοπτῶν χρηστ.). The substance of it is as follows: An Egyptian pilot, passing the Echinades Islands, was hailed by a voice from the shore, biding him announce the death of the mighty Pan, at Palodes: and on his uttering the words, as commanded, a prodigious groaning was heard. Demetrius also states that the inhabitants of one of the small islands off Britain told him (about the same time) that great commotion of the elements, pestilence, &c., was occasioned by the death of mighty spirits, whose existence, like a burning lamp, gave no annoyance, but their extinction much.]

² "Εμπούρα, a horrible spectre, that changes its shape every moment. See Aristoph. Ranæ., 290.
funeral obsequies, as Suidas mentions; their hellish pranks attested by innumerable instances out of profane histories of undoubted credit. Of this sort might be the spectre at the Rubicon, Caesar hesitating that tra-
jection; and also what appeared to Brutus the night before his being slain, with other prestigious feats of sorcerers in all ages, assisted, as those deluded creatures are, by those accursed spirits’ insight into the secrets and power of matter and natural things; which they abuse in contempt of God, striving to erect a kingdom here, and affecting to be served as gods on earth, who have been cast from Heaven. Desperate and hardened are they against all that is good, nor capable of repent-
ance, because (as we have said) they had full liberty to have stood, vast experience to have known, and, in their intuition, had all that was to happen before their eyes; whereas, man, whom they maliciously drew into the crime, knew only by degrees, is frail by nature, nor of so peremptory and determined will.

These are the spirits Euripides,¹ (from what tradition is obscure) calls οὐρανοπετείς, that fell from Heaven; and which Pherecydes, the Syrian, names a generation of serpents. Verily, Trismegistus and Hierocles speak extremely to the sense of Holy Scripture about the lapse of man. Nor is it to be slighted what we read of the Persians, observing an anniversary holy-day, to

¹ [Empedocles? Plutarch, speaking of the restlessness of debtors, says — πλάζονται καθάπερ οἱ οὐρανοπετεῖς τοῦ Εμπεδοκλέους δαίμονες —“they roam about like those spirits of Empedocles, fallen from Heaven.”]
humble and afflict themselves for the death and destruction of vice; wherein the remarkable ceremony was the killing of serpents, in which figure, it seems, the devil had frequently appeared amongst them. And at this present time, most of the idols and prodigious statues of both the Indian and Chinese temples are represented in the shapes of dreadful serpents and winged dragons.

Now, though we never read of any good angel putting on the shape of beast, or other deformed creature, yet God Almighty Himself (the Second Person in the Sacred Trinity) did sometimes honour angels and angelic men (those lineaments of Deity, as some have styled it) in human forms, and as such were worshipped by Abraham, Jacob, Manoah, Gideon, David, and others, before the Incarnation. But when the nature of man was indeed exalted in Christ, who was constituted the Lord of Angels, they then became our fellow-servants, and we are forbid their adoration.\(^1\)

Now, in whatever dismal recesses these unhappy spirits properly dwell, we know it is no longer in Heaven. Doubtless, in some caliginous receptacles, detained in chains of darkness, though sometimes loosed, under perpetual check. Some will have them banished into the northern mists and foggy regions of either pole, from that expression in St. Peter:\(^2\) others condemn them to the centre of the earth, and, if not there, to the vortices and prisons of Hell itself, near its confines, expecting with trembling their last and dreadful doom. Whilst

\(^1\) Col., ii., 18. \(^2\) II. Pet., ii., 4.
the Scripture styles them Princes of the Air, to be perhaps hereafter totally deprived of light, when the sun shall be darkened, and time shall be no more. In a word, somewhere without that Divine influence, that joy and light they once possessed. For where God’s presence is not, there is Hell, and consummate misery.

We have shown how the good angels encamp about us, and that their office is to protect his creatures. Origen supposes that God acts to the interior disposition of man, and forms His decrees as He foresees he will use the freedom of his will. To such a one, (says he) namely, to one who resolves constantly to proceed in the paths of virtue, He sends a guardian angel to co-operate and be always with him; and to one who yet lives better He appoints an angel of a superior order, for his attendant; but takes away this aid from those who, having begun to live a holy life, fall back from their integrity.

What the number of angels may be is uncertain. But that there are many, nay, multitudes, is indisputable. They encamped about Jacob, and were a fiery army against the Syrians. Daniel saw thousand thousands ministering before the ancient of days. And as their number is great, so neither is less their power. Consider we but what they did, not only in the camps we spake of, but the mortal slaughter of the Egyptian First-born, the seventy thousand slain for David’s

1 See Euseb. Praep. Evang., lib. vii., c. 4.  2 Gen., xxxii., 2.  3 2 Kings, vii., 6—xix., 35.  4 Dan., vii., 11.  5 Exod., xii., 29.
But though the evil angels are thus strong, and so malicious—though the devil be come down, having great indignation, because he knoweth that he hath but a short time, and therefore denounces perpetual hostility to the seed of the woman which bruised his head—yet is there a power above him, at the thought of whom the devils tremble, and to whose iron sceptre they all submit; so that neither death, nor life, nor angels, nor principalities, nor powers, nor things to come, nor height, nor depth, nor any other creature, shall be able to hurt those who flee to God for succour, who has promised not to suffer us to be tempted above that we are able, but will also with the temptation make a way to escape. And if evil angels beset us, the angels of the Lord encompass round about them that fear Him, and deliver them. For the chariots of God are twenty thousand, even thousands of angels; and more are they who are for us than those who are against us.

The use we are, then, to make of this, will lead us to the contemplation of that Infinite Being, whose ministering spirits these angels are. Secondly, that since such glorious and mighty spirits fell, we take not only heed to our footsteps, but praise our gracious Maker, who, when we fall, lifts us up again, so we fall not presumptuously and finally. Thirdly, that since they protect and serve us with such readiness, who are so much

---

3 Col., ii., 15; Rom., viii., 38, 39; Heb., ii., viii.
4 I, Cor., x., 13,
inferior to them, we as cheerfully serve and assist one another. Lastly, that, considering the malice of Satan, our own frailty, the presence of so great a God, who spies out all our thoughts, as well as actions, instead of rejoicing the holy angels at our conversion, we grieve them not by our perversion; which that we may always remember, let us take the advice of a holy person,¹ *In omni loco, in omni angulo, reverentiam exhibe tuo angelo; neque ille præsente facias, quod me præsente erubesces.*² Revere thyself, and put on the πανοπλίαν, the whole armour of the Apostle, that we may be able to resist, yea, and overcome him. He flies at all, nor spared he our Blessed Lord. Nor is it sin to be tempted, but not to resist it, is the fault. To suffer temptation is indeed a misery; but to set upon its mortification, an occasion of virtue. In a word, not to be tempted happens to none alive. Freedom from temptation has in it more safety, but less honour, if we resist, and from such he flies.³

SECTION III. OF THE INTELLECTUAL SOUL.

We have already spoken so copiously on this subject, that the soul and thinking part of man is not contradistinct, but absolutely diverse, from that of other animals,

¹ S. Bernard.

² “In every place, in every corner, show reverence to thy angel, and do nothing in his presence, that would shame you in mine.”

³ He that would see more concerning angels, their Establishment and Fall, may read the 11th and 12th books of St. Aug. De Civ. Dei.
or material principles, and that there is such a peculiar substance belonging to man alone, that we shall not need farther to enlarge upon it, than briefly to set down what does chiefly occur concerning its original and production, with a short repetition of some arguments formerly touched.

A learned Father \(^1\) was of opinion, that all the souls which were ever put into bodies were created at once and altogether from the beginning, and ever since reserved in store by God, to be from time to time (in their turns) infused into them, as man's production and successive matter require.

The Egyptians, and from them Pythagoras, held that, there being only such a definite number of souls created, they transmigrated into other bodies of men, or other animals, when any body died.

A third sort would have the soul of man (as of other living creatures) to be propagated by the seminal traduction of the natural parents successively, from the first person and womb that ever conceived: this virtue, nevertheless, to be first *ex nihilo* created and infused. And lastly, (with St. Augustine) others, especially the modern divines, that this intellectual particle was not only so created, and infused in our first parents, and so transmitted, but by an every-day's, yea, every moment's new creation and infusion, was immediately, divinely, and miraculously poured into each individual conception, which came to life and animal motion.

Indeed, the two first of these have been generally

\(^1\) Origen.
exploded, and therefore deserve not to be insisted upon; the two latter warmly controverted, and, for aught I can perceive, with no unequal probability. In the mean time, that man consisted of three parts, or principles, spirit, soul, and body, St. Paul has somewhere not obscurely intimated; or, as Plotinus, νοῦς, the mind only was attributed to man, as immediately infused—as created de novo and ex nihilo, upon every quickened conception; or, as others taught, seminally traduced by the parents; whilst the two other were common to us and brutes. Nor doubt we but that body is the product of body, together with the animal soul and life, consisting of a subtile, ethereal spirit, or flammula, whose centre is the heart and vehicle the blood; dispersed through the whole body by innumerable passages, to give it life and motion, and which, through its exceeding volatility, as it exhausts itself, is continually supplied and repaired again by constant aliment, elaborated in proper vessels and divers circulations; whereby the animal life is maintained, (as the flame of a lamp by the supplies of oil) and all the faculties belonging to a sensitive creature kept in motion. But this by the way; for it is not here we intend to dilate upon the mere animal life, but that intellectual principle which does, somewhere or other, reside in man alone.

That it is diffused, and takes up the entire body, has been the wrangle and altercation of those who have confounded all the world with their inextricable jargon

1 Thess., v., 23; Genes., ii., 7; Eccles., xii., 7; Job, xxxi., 15—xxxiii., 4; Isai., xxix., 24; Zech., xii., 1; Acts, xvii., 25.
and definitions. If, indeed, we did judge and reason at the extremities of our fingers or toes, or, that any other remote and external member being cut off; the intellect were prejudiced, there were some appearance for the assertion: but, so long as the more noble organs remain untouched, it proves otherwise. Why, then, should it be rather assigned to the sensible and tactile faculty, where the understanding does not at all exert itself, than where it so conspicuously does, and from whence it universally irradiates all the rest, namely, from the head? Nor yet, as confined, but as the Sun in the Firmament;¹ not, I say, in loco, but hubitudine, as logicians speak; nor as in brutes, co-extended with the body, so as but part in a part, the whole in the whole, but as impartible—all in every part—filling the receptacle, yet taking up no place of it; nor as co-augmenting with the growth of the body, only beginning there to be, where before she was not, and ceasing to be where she lately was. So that, of all created beings, she alone is the most resplendent mirror, image, and epitome of her Creator, since, as God, she is invisible; as God, a spirit, though not such a spirit: she fills the body, or microcosm, as He the universe; neither occupying place, nor being comprehended by place, whilst she is yet All in every place. And thus, when a new creature is produced, then God begins to be; yet without local motion to facilitate his admission: and when that ceases to be, God neither ceases, nor is diminished, but only ceases to be there, without change of place.

¹ See Lactant. De Opif. Dei, cap. 16.
In these, indeed, God and the intellectual soul seem to agree, but in Him with infinite more eminency, since the Almighty governs and disposes of the Soul, as the Soul does of the Body; which yet she cannot do, were she not the form which denominates the man, whilst God is not made the soul or form of anything He produces; or as if of Him, and all that He has made, any third substance should emerge, who is the Universal All, Omnipotent, Intellectual, moderating, disposing, and moving all, without being moved at all. And, whilst the human Soul is properly but in the living and animate organs, God is all in all things absolutely, and that not in bodies alone, but in spirits. Nor does any thing exclude Him: for where He is not, nothing can be. The Soul is, then, so in the body, as she serves herself of the body, to perform her functions; whilst virtually, essentially, and communicatively, she is in the whole and in every part, but more eminently in the superior part, as is evident from the notorious interruption of her intellectual operations, when the head or brain is vitiated: not that the Workman has lost skill, but because his tools and instruments are broken or dull, he cannot use them to any effect: nor that the Soul were subject to the head or brain alone, or to any other particular residence; but for the reasons produced. Their assigning its place to be the pineal glandule is nothing but a conjecture, because anatomists know not perhaps what other use to put it to, since the same is found in the head of beasts as well as in man's.

The human soul is, therefore, a substance altogether
independent of the body, or any part of it; and consequently, as a spirit, needs no such organ for its domicile. Though she makes use of all, she dwells in none, but as she adoperates and serves herself of the body and its more eminent parts, where the reason and intellectual powers are, as it were, set on a watch-tower, from whence she speculates, sends out her parties and emissary senses, to discover and make report of what they find; in a word, all forms and motions, upon whose relations she proceeds to judge and determine freely; which, if more apparently from the head, is by reason of its being the principal mansion, where the sensible species and ideas make their deepest impressions: not after the manner of corporal impulses, (a certain recognition of the impulse) but rather a spiritual intuition, the Soul herself moving and perceiving, and not the body properly, which is all this while but a dead piece of organized matter, and no more; tuned, indeed, and fitted with strings, but making no harmony without this skilful artist. The Soul exercises, indeed, her functions more conspicuously in the head; and it is also for its structure and eminence the more adapted instrument, nay, the Basilick, where the Great Creator seems chiefly to have seated her, and from which the intellectual operations issue and discover their effects. For, though we perceive and feel our other parts affected by the several passions, still the perturbation sensibly proceeds from the head, where the fancy and will follow the dictates of the practical intellect.

1. ἐπ’ ἀκρῷ τῷ σώματι.
Now, since everything in Nature requires place, and a dwelling to reside in, and that spirits, and (as we have showed) even angels, both immaterial, cannot move beyond the universal body of matter, which is doubtless their place—this Soul of ours, one would think, should not be destitute of some figure and dimension, too. But of this we have no measures. Its nature and excellencies so transcend our deepest inquiry as to this particular, that we quite lose ourselves, and our conceptions vanish into figures and analogies, when we would describe it. It is enough we are assured that, whilst the Soul comprehends the Body, she herself is incomprehensible. Wherefore, though we assign her place, and cannot but believe her moveable too in time, we prescribe no limits, set her no bounds, nor can we effigiate or draw the profile. He, He only, who formed her, can describe her, and to Him we submissively resign this impervestigable research: so true is that of an excellent poet:—

---Divinum est opus
Animam creare, proximum huic ostendere.

Nor with less difficulty shall we be able so much as to conceive the manner of the Soul’s act of understanding—that an incorporeal substance should produce a corporeal intellect, or, vice versa, how from corporeal ideas there should result incorporeal perception; un-

1 [Dr. Bathurst, a friend of the Author's, Dean of Wells, and President of Trin. Coll., Oxford. See his "Life and Literary Remains," by Thomas Warton.]
less, with some of the Fathers, we allowed her to be of such a contexture as were indissoluble, without being totally incorporeal; at least, of some middle nature, apt to connect the animal soul without local mixture; like the union of steel and magnet: I say, to conceive how she should act without some such concession, is hard. For, though the soul may possibly exist without corporeal organs, and perform some actions of life, yet, being so adjusted to the body as she is, though she may comprehend and contemplate intellectual notions and reflect upon herself—nay, as a kind of Hypostatic self-existent Ens, or being, subsist, as she acts in sleep (which is the image of death)—how she should locally move, see, and hear, and exercise other senses, without the instruments of those senses, increases the admiration. That the soul was not, therefore, of altogether so metaphysical a nature, was the opinion of many great and holy men, besides philosophers; for such were S. Athanasius, Origen, Tertullian, Damascene, S. Basil, S. Jerome, and divers others; but intending, I suppose, the pure and simple essence of God, to which all other substances are but thick and gross, in comparison; and then, it was also to encounter the Gnostics and Manichees, Priscillianists, and other heretics, who held the human soul to be a part of the Deity itself, even as to its very substance, which is, we know, the only unconfined infinite and (ab origine) incommunicable Eternal Existence.

But to solve these difficulties, of communicating her operations so uncontrollably through such inactive mat-
ter as she daily passes, some have attempted to fix her
delicate substance in the fancy, and her ideas, without
any commerce with the lower functions; and so to
speculate those ideas, as to produce other ideas and
images more sublime, consonant to the acts of the un-
derstanding, the will remaining free. Indeed, this con-
cession would solve a mighty difficulty, were it as
intelligible as it is the contrary: or that they could tell
us how to unite an unelementated substance with cor-
poreal matter, how diluted and defecated soever, airy,
or fiery; since still it is a mixture of things incom-
patible.

Wherefore, the Cartesians are resolved to admit of no
substantial life anywhere, save in matter, making the
intellectual and rational soul but a sublimier modifica-
tion of it; and that men differ from brute animals only
in the more curious organization, the use of speech, and
the like; but do not in the least satisfy us how thought,
which is altogether incorporeal, and often conversant
with spirits, and metaphysical notions that have no
manner of relation to matter, should be produced by it.
If any life or thought may be thus factitious and gene-
rable, out of lifeless matter, so may everything else
in nature; which to affirm, were both nonsense and
Atheism.

Indeed, the material soul does likely give that motion
and activity to the engine body by sensation from the
external stroke—motion from the internal impulse of
objects, as we have showed: but how it comes to per-
form not only such actions as are of custom and purely
necessary, but also to discern others more difficult and progressive, and notions never derived from our senses, does utterly exceed the capacity of matter, however modified or refined; namely, that life and sense, understanding and reason, should be merely local motion! Wherefore, both Aristotle and Anaxagoras, finding themselves at a loss about this mechanic fabric, (however fortunate the modern wits fancy themselves, and brag of what feats they can do with their puppet) were glad, it seems, to call in a mental cause to their aid; which is more than these gentlemen will allow and condescend to, after their machine has received its first impression of motion; whilst we have sufficiently made appear, that no body or magnitude could ever possibly move itself, but by the motion of some other agent: and therefore some other substance there is, which is not body: and to say that anything of this nature is effected by forms or qualities, is a mark of great stupidity.

Were the intellectual soul a material substance, sensible and material things would improve it, which it is plain they do not. Men can speculate with shut eyes, and that more profoundly; and all material faculties and conversation with sensual objects quite lose their energy by their vehemency, whilst the intellectual soul becomes more vigorous and enlarged, and can, and often does, resist corporeal pleasure; this she would not do, were she herself corporeal. She is the same in sickness as in health; nor does age impair her, because there are in her no repugnant principles.
We have abundantly showed that, though the human soul be lodged in human bodies, which receive life, animal motion, growth, and activity from the animal life, yet this life is not capable of excogitation, or of diverting and improving any act or science, how old by experience soever; nor can it deliberate, judge, and determine rationally of things above the possibility of sensual objects, common to us with brutes, who are only concerned about things present, and such as belong to the maintenance of the body, its nutriment, propagation, preservation, and pleasure. And, though amongst some of them there may be found certain offers and approaches to reason, as in horses, elephants, foxes, dogs, &c., yet they are but misty, obscure, and imperfect strictures of it, and are still the same, nor advance they farther than to instinct and repetition.

We have showed that, in all other creatures living, the sense and appetite govern the body; whereas, the soul of man governs both the body and its senses, and often contradicts and resists them both; and that sometimes even to death itself and cruel torments; and upon occasion rectifies the mistakes and hallucinations they are obnoxious to. So unlike are the sentiments of these two principles, the operations of the mind, and those of the body, that there is no proportion between them: for were their perfections any way propagable by nature, one wise man would always beget another wise man, which very seldom they do: Solomon begat a fool, and some fools have been the fathers of wise and illustrious persons. We have also made it evident, how
the intellectual Soul is conversant about things totally
separate from sense and matter—speculates things in-
visible and abstracted—understands the nature of affec-
tions, of numbers, and mathematical figures—penetrates
into causes and effects—and is capable of taking into
its contemplation the whole aspectable world, passing
in a moment from pole to pole, and diving into the
profoundest abysses.

Brutes have sense, and memory, and fancy, in weak
degrees, and are susceptible of divers passions and
affections, as well as men; but comprehend nothing
above matter, and what is immediately before them.
They can be taught to imitate some particular things,
but they know not why, nor what they do, much less
have they any notions of religion, or the moral virtues,
nor know they any thing of spiritual and infinite, be-
cause all material operations are confined and limited,
and rise no higher than the spring of matter. Where-
fore, the intellectual Soul is a substance so transcend-
ently pure and sublime, as can proceed from none but
God, who created it; but whether immediately pro-
duced, without any progenial traduction or radiation,
as Tertullian, Apollinaris, and others hold, and many
still assert, with no contemptible arguments, is, as we
said, the dispute.

St. Augustine and his followers were for a perpetual
creation and instantaneous "εἰκόνα, or animation, by
way of infusion: whilst those of the school of Plato sup-
plied it out of a pre-existent magazine, immortal and sepa-
rate from body; fancying that the species of all things
in nature were conereated together with our souls, which, after their descent, (no more remembering what they did or where they passed their time before they came into bodies) learn and agitate here, by degrees, not as fresh and new notions never known before, but as things recovered by way of reminiscence and recollection, as the bodily organs grow more vigorous and capable.

It seems, by this conceit, as if some heinous guilt, contracted in a former state, were by this to be expiated; seeing, if in their new mansions and province they had governed wisely and better, they were in time to be delivered from their Ergastulum,¹ and restored to their pristine happiness. Nor was it only the opinion of the Platonists and Academics, Iamblicus, Plotinus, and their Disciples, but of the great Hermes, and even Aristotle himself; of the Pythagoreans, and many of the Jewish Rabbies: established on that of Wisdom,² “For I was a witty child, and had a good spirit. Yea, rather, being good, I came into a body defiled.”³ And thereupon they have condemned some to do their penance in despicable insects, as well as in the greater and more generous animals, nay, in trees and plants, exposed to wind and weather, and even reduced some of them to annihilation. Nor was it, I say, the notion of these

¹ “House of Correction.”
² Wisd., viii., 19, 20.
³ Eram puer bonam indolem sortitus, immò bonus cum essem, corpus contaminatum reperi. [Some editions of the vulgate read incoinquinatum, which is followed in the authorized version.]
alone, but of divers christians likewise, and amongst the Fathers, Origen,¹ against which St. Augustine somewhere declaims; and it sounds prettily indeed in allegory, and would better pass, did we not by daily experience find how unwilling this imprisoned soul of ours is to depart and leave its confinement, as punitive and miserable as they pretended it to be.

It is on this account, they tell us, how this noble and divine substance finds herself distressed, at her first descent into the body, through the weakness of infant organs; as under durance, chains, and weights, till, with the more mature and cultivated body, she arrives in time to be able to exert her power—recover herself—and, by illustrious notions, to discover whence she came, and whither she aspires, and what a glorious thing she was in her quondam state of separation; though now again assigned to an unhonourable or perhaps mean apartment, for probation and exercise of her virtue.

But, whilst we are describing these extravagancies, Maimonides, I remember, tells us of a sect that held the Soul, and all things else in nature, to be but only *accidents*: and that all our knowledge is in perpetual flux, and not the same to-day as it was yesterday, but that there is an eternal creation: and so a man must have ten thousand souls every moment, and for every motion and modality, whether he sits or walks, reads or performs any other action or motion, as so many accidents are souls created in the instruments perform-

¹ Origen, Περὶ ἀρχῆς, l. 3, c. 3 and 4, c. 4; S. Aug., Ep. 27.
ing them! But of these perhaps more than enough; whilst that of *traduction* (for being asserted by champions of no mean account, nor without support of equal argument) may deserve a paragraph in the chapter; especially since it is conceived it may be evinced without any pre-existence in the platonic notion, or the least violence to other truths, and solve its immortal and indivisive nature; nor stands in need of new fabrics and creations to attend every human conception. Nor is it (say they) cogent, when they reckon from the sacred text\(^1\) that God did absolutely cease from all His works, to admit its only signifying His making greater worlds, and not these microcosm terrellas: or from that of S. John, "my Father worketh hitherto, and I work,"\(^2\) if He be continually busied in new creations; when it may as naturally import His work of providence in blessing and supporting what He has made with His Father; and, what is more, the work of grace.

If, as it appears, and no Christian doubts, the Almighty breathed into man the breath of life, by which he became a living soul, what should hinder but the same celestial inflation should be as apt to kindle into millions, as the most actual flame first warms and then heats and inflames the nearest disposed matter, without any division or diminution whatsoever?\(^3\) This allusion

\(^1\) Gen. ii., 2.  
\(^2\) S. John, v., 17.  
\(^3\) *Integra lucerna, integra manet, licet altera de illâ accendatur.*—*S. Augustine.*—"The light of a lamp remains entire and the same, though another be kindled from it."
of the Soul to flame and light having, as Plutarch thinks, so near a cognation to the Soul: and so the poet,

Igneus est ollis vigor, et caelestis origo
Seminibus.¹

Sufficient, say they, was that blessing, "Increase and multiply," given and spoken by the great Creator to the first couple; not as a well-willer only, but as promoting and perfecting both the general and particular act and power of His concurrence, with procreation, to produce that potential being, the human Soul: and so God, secondarily to His original benediction, may be said to create or inform, but not out of nothing, (as in proper sense it signifies) which were wholly repugnant to His resting the seventh day, and to the positive sense of the text. For, when God created Nature, it was by a proper action and supernatural re-creation, educing out of a chaos (in which were latent principles and simple essences of all things) whatsoever he did create: and doubtless established all her seminal powers, to specify and produce all that she was ever to bring forth, so as never to stand in need of any more and immediate supplies: thereby illustrating His incomparable Wisdom and Providence, that, in so many thousand years as the world has been created, nothing should be defective, nothing desiderate, nothing impaired, nothing redundant or that needed any after better excogitation, or second thoughts, to render this universe more

¹ "Th' ethereal vigour is in all the same:
And every soul is filled with equal flame."

Dryden—Virg., vi., 730.
complete, or to carry on the succession of things to the end, with this work of propagation, not only as to the rest of animals in a life of sense, created before man, (and whose souls God is not said to have in-breathed) but to whole mankind, by a more peculiar and special Grace, in a life inspired with reason. Nay, how could man have multiplied in that manner, without this principle, since, without it, it had not been to multiply his own species, but a body only, without a Soul; and such as must have been free of all original taint? Besides, what necessity that all who derive her from the first spark set in motion by the Divine Breath\(^1\) should stand more in need of a new creation, than for men (Prometheus-like) to fetch fire from Heaven by an extraordinary process and so many seeming absurdities, so long as it is flaming in every hearth?

I am very sensible how many great and worthy persons (by far superior in name and number) dispute against all this; and, therefore, only repeat their arguments, who tell us that their opponents might peradventure not look so far back, as was necessary to conclude so dogmatically for daily and instantaneous creations and infusions. Nor do they pretend as if any Soul, springing from traduction, should be less from God’s immediate handy-work; and may therefore be called creation, seeing he had no assistant but the Holy Trinity; and so may still be said truly to give souls every moment, by His general blessing on propagation,

\(^1\) Theodoret, Ambrose, Hilary, Hierome, Calvin, Beza, Bullinger, Ursinus.
from the first virgin soul infused into Adam; whom accordingly we find called by the Evangelist, the Son of God—the rest of mankind his progeny only.

As to those other Scripture arguments, a late revered Doctor,¹ amongst others, has showed that the Soul in Sacred Writ is used with so great variety of sense, as that little material can thence be fetched to the disadvantage of traduction—the very notion of the Soul's regeneration premising a generation. Nor can it (some think) be safely made out how that secret contagion of all the sons of Adam should be derived from the body only; since it were with Pelagius to deny the soul's being the subject not only of that, but of all other sin whatsoever,² as accident in subjecto. They fancy it very difficult to conceive how this deadly spot should adhere so pertinaciously without some traditave emanation, seeing the body does not defile the Soul, but the will, fancy, and understanding, which are the rational faculties, and should govern all the rest.³ Indeed, the senses intromit the objects of temptation, but it is the other who makes the choice, and determines them to act; and it is the heart⁴ which is the source of our corruptions. For, how should pure and uncontaminate spirits, never before in being (without recurring to pre-existence, and charging the souls with former guilt) come thus polluted into bodies, nay, (and as some almost say) ere the

⁴ S. Matt., xii., 34, 35; Ephes., iv., 18, 19, 20; Jam., i., 13, 14.
recipients had done good or evil, without injuring the infinitely Divine benignity, purity, and justice? Nay, how could Seth be procreated in the image of his father, (as all Divines agree) stained with the contamination derived from Adam, but through the leprosy of his Soul; which never signifies the entire person, and denominates the essential man? For, were it otherwise, the lapse were but personal, and would have determined in him: whilst pollution is only chargeable upon the Soul's account, whose vassal is the body, moved and directed by nerves, as by reins the rider does his horse.

To this they oppose the Soul of our blessed Lord; but I opine that it does not at all enter into these circumstances; and, besides, it is a secret reserved for another state, when we shall know as we are known, not as now, in part, but even this high mystery in all the comprehensions of an exalted nature: nor, in the mean time, is our ignorance reproachable. Excellent, therefore, is that advice of Tertullian (however in other matters not so consistent) Præstat per Deum nescire, quia non revelaverit, quàm per hominem scire quia ipse præsumserit.¹

It is sufficient to believe, as to this, that the Holy Spirit sanctified the substance of the blessed Virgin, from whom Christ assumed His sacred person: and as it is not the Soul, but the concupiscent circumstances of procreation, that induce the fatal taint, our blessed Lord

¹ "It is better to be ignorant through God, because he hath not revealed, than to know through man, because he hath presumed."
—Tertull. De Animâ, c. 1.
was not so produced: all was miracle; all was mysterious; all pure, divine, and supernatural; and "Who shall declare his generation?"—Even He alone who infused the Soul of the first Adam, and so might do of the second.

The only remaining difficulty of importance, then, seems to be, how but a single Soul should be produced, which, being by nature indissoluble, simple, and incapable of mixture, could receive no further perfection from conjunction. To this it is offered, that the Soul traduced is from the woman only; neither is it less the Soul of man, forasmuch as she was taken out of man: nor do we read of two different inflations, or that there were any other Souls created separate from her, but what she received from Adam; nor any other human body framed from the earth, save only his. Nor are they lastly, without as pious and learned suffragans, when amongst them we find Cyril, Apollinaris, the judicious and great Melancthon, Keckerman, Magirus, Horslius, &c.; and that the opinion was almost as universal as mankind through all the Western Churches, as St. Jerome himself acknowledges.¹ Nor is Tertullian to be slighted because the devout man fell into some errors afterwards; for, as much as the great St. Augustine himself does hesitate and did not care to deliver anything peremptorily against it; nay, ingenuously confesses that he knew not what to pronounce, which may serve one that should incline to it for

¹ Tertull. de Anim., c. 27, 40; Jerome Paulin., Epist., 2; St. Augustine, Epist., 28, 157, and Serm. de Orig. Anim.
apology; and that he also, as well as others, has been as much puzzled with his "Creando infunditur et infundendo creatur," &c.—whether created or infused by one inseparable act, or by infusion created; in proportion to the perfection and growth of the elemental principles, and when the palace should be fitted to entertain the royal guest; or, whether not all infused, till all was finished, or (as the Stoics) not till after birth, at the first ingress of air, &c.; which all are abstrusities as entangling and mysterious as Entelechia itself.¹

In the mean time, some there are who thought it a diminution to the human Soul, that what has been held to derive its existence from the immediate infusion of the great Creator, should spring but from parental traduction, as other animals do. Whilst others esteem it to exalt its extraction, and do honour to her Maker, whose divine power they do not necessitate and engage to wait on every promiscuous blending; some whereof are highly unsuitable to His pure and Holy Nature.²

But, even in illegitimate comimixtures, God blesses nature, though not the perversion of it; and thus, man has will and strength to do many evil things by abusing his faculties. This I speak with all deference and submission to that late pious and excellent person. I say I do not see how it can dishonour the Divine Author, or

¹ Ἐντελέχεια—[a name given to the Soul by Aristotle; it has given rise to much discussion (see Donaldson’s N. Crat.: now supposed to signify that by which the body actually is.—Liddell and Scott’s Lex.]

His creature, to derive the Soul from a stock so ancient—a pedigree of such a series—whose root is immediately from the Almighty in the primary creation and infusion, before the fatal lapse, and still resembling Him, when purified by virtue and true piety, which restores her to her primitive beauteous image: for, though with some we make her not a goddess, nor with Philo and the Manichees, any part of that which is impartible—though not with Empedocles, plainly a god, yet with Laetantius, Deo Similem.\(^1\)

Whatever, therefore, it be, this controversy is so finely sifted, solidly and so fairly disputed on both sides, that men will not find it easy to determine who is in the right or has the better; whilst man, consisting (as we noted) of spirit, soul, and body,\(^2\) the two latter may be propagated, the first created, correspondent both to the Platonic and divine notion.

We have showed how the Conciliators, from their twofold production—the natural power of the creature, and the absolute power of the Creator—have educed the Soul out of some obsequious and obediential matter, so as the new soul, sprung from Adam, may become tainted, (as all of us are) though it should be immediately produced of God:\(^3\) by which there does not appear any necessity of taking from God the honour of His original creation of the Soul, who gave life and soul, and bid it increase and multiply.

\(^1\) Lanctan. De Opif. Dei, c. 17.

\(^2\) I. Thess., v., 23.

\(^3\) Eccles., xii, 7; Job, xxxiii., 4.
But to proceed: even the favourers of immediate creation and infusion, whilst the immaterial Soul exists in God, (whose Providence alone is that inexhaustible magazine of all intellectual beings) do allow *traduction* to the elemental pre-existent matter of all sensitive spirits whatsoever, which *specify*, by virtue of the fabric and composure of their *generator*. Now, (say these) as the sensitive and material Soul is propagated by *generation*, the immaterial is by *creation*. And first, for that no ignoble cause, out of its own sphere of activity, can produce a noble effect, (supposing a body to produce a soul) seeing the operations of the Soul are so infinitely superior to those of the body, as is manifest by the manner of those operations; and that her objects need no intercedent organ or medium between it and the faculty, educing also those operations from within by *elicit* and immediate acts, and such reflex ones as are totally foreign to the comprehension of other animals, perfecting the understanding by the most sublime and abstracted contemplations, and qualifying it to penetrate into causes and matter supernatural—nay, and even some out of the body, as ecstacies, raps, visions, introversions, acts of volition, intuitive knowledge, and, above all, the *Spirit of Grace*—that she is likewise indivisible, as not having her being of form, that is, remaining uncompounded, immortal, and if not infinite (as God alone is infinite) yet, in a sort, indefinite, since nothing can fill and satisfy her which is less than infinity.

Moreover, she does not see, hear, touch, or, indeed,
exercise any sensual faculty, as the body does, things adequate and congruous to its senses, and yet she perceives intellectual notions, and what spirits and separate beings are, nay, and universal notions and things which have no real existence at all in nature. All which the assertors of traduction do, in no sort, detract from, whilst (as we have showed) they recur to a propagation of the primitive soul infused into the first man, and as capable of kindling others like it, as onetorch to light a thousand, without diminution of its own light, heat, substance, or any other qualities; and this also in a manner much more spiritual than any thing material it can be resembled to: so as a body does not beget a Soul, but the Soul a Soul, and the body a body only. And why one Soul should not propagate another, as animal does animal, or as divers sorts of fruits are yielded by the same tree, without any transfusion or decision of parts, no convincing argument seems to appear. Nay, even as to division, no mortal can know how far spirits are indivisible, or whether they have no seminal excrescences, as a late Doctor has noted: Men may be too much in the dark to determine; nor why the one should not propagate another as well as bodies do, are (say they) altogether as precarious and conjectural. Wherefore, to conclude this controversy with that text of Saint John, "The wind bloweth where it listeth," &c. Maldonatus hath this excellent note:  

1 Dr. Parker, on the Pre-existence of Souls.  
2 John, v., 8.  
3 Anima ubi vult spirat, id est, quæ vult, animat corpora, et vocem ejus audit, nempe hominem loquentem, equum hinnientem,
"The Soul animates the body as it pleases God, and we hear its voice in man speaking, in horses neighing, (and in other creatures by their different cries and noises) by which we are assured they live; but whence it proceeds and is propagated, how it informs the body, whether it goes, in what it ends, or how it vanishes and deserts the body, we are wholly ignorant of." To which let me add what is most certain, even from the light of nature—Animorum nulla in terris origo inveniri potest—nec invenietur unde ad hominem venire possint, nisi a Deo.  

In the mean time, (not as the Manichees, who held there was a good and evil principle or soul in every individual body) it must be acknowledged, that we have all of us a corruptible, mortal, (and if I may be allowed so to speak) a caduce and bodily soul, frail as the vessel which contains it, as well as that immaterial principle which we have been describing. For as to the multiplication of forms, as waiting the same matter, the objection is solved by the subordination of the one to the other, so as, whilst one is extinguished, the other survives as supreme. The sum of all is, that, whilst the rational soul is not immersed in matter, nor using

&c.: unde scis eos vivere, nescis tamen unde veniat, id est, unde gignatur, quomodo corpus ingrediatur, aut quò vadat, in quod desinat, quando egrediatur è corpore, &c.—Com. in Evang. ad locum.

1 "The origin of the human soul is not discoverable upon earth: nor shall we find the source whence it could come to man, unless it be from God."—Cic., Tusc., lib. 1.
any organ, but is altogether conversant with things supernatural and from another state, there is a sensitive inferior reason, or passive intellect, which communicates with the first, but is of itself a plain and empty field, till influenced by a superior principle: that, as sensible and perceptive only, it has faculties in common like other animals; but, as it discourses, abstracts, and logically distinguishes, has relation to the intellectual soul. This latter is universally enlightened and comprehensive of all that knowledge, of which the other has no notions, namely, connate principles, concerning the existence of a Deity—that religion is due to it—that there is such a thing as conscience, natural justice, &c., besides other mathematical truths and peculiar comprehensions proper to man only, though his soul cannot draw geometrical schemes of them, without artificial aids and institution. It is by one of these man becomes a living, sensible creature; by the other a rational, intellectual one; whether of yesterday's creation, preexistence, or tradition, is left to men's judgments, but such a one, as needing no corporeal instrument to exert her faculties, as the animal life does; but by traduc ing that life as a medium uniting them, not as a form with matter, but by way of accidental essence. Nor is this co-existence with any mixturous confusion, or change of substance incompetent to actives and passive, con natural and reciprocal; but as an immaterial substance, suffers no composition, but remains separate from matter altogether: indeed, it moves, orders, and directs this matter, (as we have showed) but is not what it moves
and governs any more, than (to use Plato's expression) the pilot is the ship or vessel he steers. In a word, she is the body's essential form, making but one indivisible Hypostasis, which gives it life, and sense, and motion; and, therefore, neither is the Soul in the body, as a fish is in the water, or a bird in the air, so as not to live and breathe without it, but being that which only has the motive power and activity, is certainly superior and altogether independent to what it moves and acts upon.

To dismiss, then, these difficult researches, either what the Soul is, or how she descends into the body, whilst we should rather be solicitous how she goes out of it, there being more piety required than science in this dispute—it is sufficiently evident that the human Soul is a quite different substance from that of any other living creatures, by prerogatives vastly superior, performing actions worthy the dignity she challenges and the rank she holds; for, as one says, we must not think that the man begins, when he can feed himself and walk alone, when he can fight and beget his like, (for so can a camel and a boar) but he is first a man when he arrives at a certain steady use of reason; and to this some are early called, some later, some never, and they live like goats, and die like asses.

These things concern us infinitely more than the profoundest speculations of the Soul's essence and all our past inquiries. Therefore, we cannot but acknowledge how difficult a province he undertakes, who thinks to seize the royal and towering game, by dogmatizing and over peremptory assertions; when, to de-
base the pride of mortals, it proves (we see) so hard to assign any certain and ineluctable demonstration of the nature of the Soul's production and utmost comprehensions, to that degree as to force assent from Atheists, and even vicious persons, and such as will not give faith to any thing which contradicts their sensuality. But to those whose minds are defecate, and exercised in contemplations worthy the character of reasonable men, and look after other worlds, there's nothing more conspicuous and certain than the existence of this immaterial principle, (to which we shall add, because it comes next to be spoken of) capable of immortality.
CHAPTER III.

SECTION I. THAT THE INTELLECTUAL SOUL IS IMMORTAL.
SECTION II. THAT SHE SHALL RISE AGAIN, AND RE-UNITE WITH THE BODY.
SECTION III. A FUTURE STATE, AFTER THIS LIFE.
SECTION IV. AN ACCOUNT TO BE GIVEN OF HER ACTIONS IN IT
SECTION V. FOR A JUST RETRIBUTION.

SECTION I. THAT THE INTELLECTUAL SOUL IS IMMORTAL.

God dwells only in Himself: the plurality of all things and beings, therefore, proceeds from Him alone. All essence and super-essence, and if any thing be immortal, it is only by Him who is eternal and immortal, was always what He is, and always shall be.

We have hitherto endeavoured to clear the nature of a human Soul as a distinct substance from the animal life, both of mankind and all other his fellow-creatures, by several illustrious prerogatives. There remains yet one, which, shining above all the rest, entitles him to the dignity of yet a more near resemblance to his Divine Maker, and that is, his Immortality.

It is observed, in the Mosaic history of the Creation, that brute animals were all made and completed at once; whereas, man, being first composed of dust, God
did afterwards, by, as it were, a second and more solemn act, breathe into him the breath of life, by which he became a living Soul; by which the wise King distinguishes him from the brutes,¹ and that, when the body and earthly part crumbles into its original matter, the Soul takes wing, and mounts to the place whence it also came. And, therefore, have all holy persons recommended their spirits to the hands of Him from whose breath they received it, and from whence they deduce a proof of its state of immortality. Solomon, indeed, has a passage, that seems to make her equal with the souls of beasts; but does he not, even in the same book, reverse it all again? Let us hear the text:—

"I said in mine heart, concerning the estate of the sons of men, that God might manifest them, and that they might see that they themselves are beasts: for, that which befalleth the sons of men, befalleth beasts; even one thing befalleth them: as the one dieth, so dieth the other; yea, they have all one breath; so that a man hath no pre-eminence above a beast: for all is vanity: All go to one place; all are of the dust, and all turn to dust again.² Wherefore, I perceive that there is nothing better than that a man should rejoice,"³ &c. To which we might add from another (though less authentic) book, imputed to the same Wise King:—⁴ "Man is born at all adventure, and shall be hereafter as though he had never been: for the breath in his

¹ Eccles., xii., 7. ² Ibid., iii., 17—20. ³ Ibid., v. 21. ⁴ Wisd., ii., 2, 3, &c.
nostrils is as smoke, and a little spark in the moving of the heart, which being extinguished, the body shall be turned into ashes, and the spirit shall vanish in the soft air, &c. . . . . Come on, therefore, let us enjoy the good things that are present. . . . let us fill ourselves with wine; let us crown ourselves with rose-buds: let none of us go without his part of our voluptuousness: let us oppress the poor righteous man, nor spare the widow, nor reverence the aged,"¹ &c.

Thus much and more we might repeat out of that rhetorical chapter; than which there is nothing a plainer contradiction of that impious deduction, which libertines, and those who would be glad there were neither God to reward, nor justice to punish, thence pretend to derive. The truth is, Man being in honour indeed, (as David shows²) namely, the first man, before the fatal lapse, by it degraded himself of that dignity; so that he became like the beasts that perish; not that he was thereby really turned into a beast, but extremely like one.³ For, whereas before he should not have died as beasts, (though, indeed, his body were of the same dissipable principles) but being translated into a more happy state, after a long and sweet fruition of the animal life below, he was, thenceforth, condemned to undergo the same fate of dissolution, as to his body and sensitive soul, which he has in common with beasts and other animals. The violation of that pact between God and man did subject him to a mortal condition as to his

¹ Wisd., 6, 7, 8, 9, 10. ² Psalm xlix., 20. ³ Eadem feritatis imago.—Ovid, M. i.
inferior soul; but that which he received by the Divine infusion is incorruptible (naturally speaking) and immortal. But it is not here we are as yet to bring, for proof, texts out of Scripture,\(^1\) which abundantly assert the Soul's immortality, (as will appear upon consulting the margin) but to show that neither is it repugnant to nature.

The rational Soul is a self-subsisting being—has no mixture or corruptible element in its composition. The Soul is a complete and perfect substance; no divinity or philosophy has hitherto made it out, that its being is relative or incomplete. But, supposing it so, it does not, therefore, follow that it cannot live in separation, seeing the very flame of every candle gives light sufficient to this inquiry, which we find can and does subsist or consist, though the matter be extinct: not to instance in Licetus's lamp, or that said to have been found in Tullia's sepulchre,\(^2\) though, if it wasted any matter, it would long since have been put out: and if

\(^2\) [The author, in his diary, thus relates the story—"In one of these monuments, Pancirollus tells us, that in the time of Paul III. there was found the body of a lady, swimming in a kind of bath of precious oil, or liquor, fresh and entire, as if she had been living; neither her face discoloured, nor her hair disordered; at her feet burnt a lamp, which suddenly expired, at the opening of the vault; having flamed, as was computed, 1500 years, by the conjecture that she was Tulliola, the daughter of Cicero, whose body was thus found, and as the inscription testified."]—Evelyn's
it spends no matter, it is all one as if it had none; for what need of it, if no use of it? and what use of it, if no feeding of the flame, but by spending itself. But the reason why the flame goes out, when the matter is exhausted, is, for that the minute particles of fire are soon overcome by the circumstant air, and dissipated rather than extinct, since it wants matter to keep it in union and society. But then, as the flame continues not, with respect to a candle's flame, when the matter is spent; yet fire can abide without matter to nourish it, for itself is doubtless matter and a substance, as well as motion: and so is the Soul of man. And, as the element or principle of fire, and the celestial bodies of fire, eat nothing, but live and subsist of themselves, so can the Soul, when divested of its relative body, and so would the flame of a lamp, or candle, could it mount to the regions of fire, as do the Souls to that of Spirits.

That the Apostle,¹ preaching to the Athenians, of the Resurrection, said nothing of the Soul's immortality, was, doubtless, because the one, of consequence, included the other; and, if it had not, yet were there no need to press that which in the learned Academy was almost universally believed; I say, universally, and so convincingly, that Cleombrotus was so satisfied in it by reading Plato only, that he precipitated himself into the sea, (for experiment sake) as no longer questioning

Memoirs, vol. i., p. 135. Montfauçon ("L'Antiquité Expliquée," v., 208) reviews carefully all the evidence in support of lampes perpetuelles, and condemns this story as fabulous.]

¹ Acts, xvii., 15, &c.
the truth: and him young Cato followed, and sundry others, who never would have resisted corporeal pleasure and the present fruitions of this life, had the Soul been corporeal and capable of those pleasures. Never would there still be such hostilities between the rational, the sensual, and concupiscible appetites.

Indeed, Epicurus and his tribe seem to have other notions of the human Soul; but so had not that great and noble philosopher, Trismegistus, of Egypt, the Gymnosophists of India, Job, the Chaldaean, and his friends in the East. It is confessed by Pythagoras, Socrates, Plato, Thales, Milesius, and even by Aristotle himself, as the Council of Vienna, under Clement the First, and the Lateran, under Leo the Tenth, have determined, asserting that philosopher's opinion. Of the Latins, we have the incomparable Cicero, besides the whole Christian school every where: nor ought we reckon for nothing St. Paul's rapture, who purposely and with design adds—"whether in the body or out of the body, I cannot tell;"1 plainly intimating, that it was no ways improbable that this elapse was not ecstatic and wholly out of the body, and so agreeable to the nature of the Soul, to operate in separation from it. Besides, God creating man after his own image, can have no other meaning than that of his being immortal; for else, what resemblance to our exterior figure and that of God, which has no shape?

Moreover, and as to the Resurrection, (of which anon) our Saviour proves it by his being God of the living,

1 II. Cor., xii., 3.
not of the dead.¹ Nor is, indeed, the death of the Soul to be defined at all, there being no death of spirits, but annihilation, none, at least, that we know of or can possibly understand. For, if ceasing from operation be death, then it often dies before the body, as it frequently ceases to exert any of its nobler functions; as when we sleep, and neither feel nor understand. If it be replied that then it yet animates the body, (a sufficient indication of life) it is answered, that if one single act be enough to show the Soul to be alive, then the Soul is immortal: for, in Philosophy, it is a maxim, that the Soul desires nothing more than re-union. Now that which is already dead has no desire. Add to this, that the Soul can understand without the body; this is evident from her acts of reflection, such as, a desire to desire, a will to will, a remembering what she did remember, &c. So that, (as we said) if one act be sufficient to prove the Soul to be alive, the state of separation cannot be a state of death to the Soul, because she can then desire to be reunited to the body; and she can also understand, forasmuch as nothing can hinder her from performing those actions which depend not upon the body, in which the operations of the Soul are not organical.

Again, the Soul does not depend upon the body, but the body on the soul. She gives life to the body, receives none from it, but rules and governs the body as she pleases; and can ratiocinate and act vigorously when weak and even expiring, when the Soul (as we say) sits upon the body's very lip, ready to take flight. Be-

¹ S. Matt., xxii., 32; S. Mark, xii., 26.
sides, having no repugnant principles, it is indissipable otherwise than by a total annihilation: which we cannot reasonably think, since we do not find that Almighty God did ever yet put out of being any species which He ever created; much less is it likely that He should the noblest of His creatures.

In a word, 'God, even with a word, can extinguish this glorious spark; but that, I say, He ever will,¹ is nowhere to be gathered; and therefore Grotius doubts not to affirm, 

\[ \text{velle Deum ut extinguatur animus, nullo potest probari argumento.} \]

Wherefore the Soul, as she actuates the body, is a spiritual essence—as she survives the body, an immortal. Nor is that prince of philosophers to be otherwise understood, though heedfully attended, where he speaks of its separation from matter;² the Soul's conjunction with the body being so incon siderable and accidental, in respect of its separation and eternity. Nor did Aristotle dispute it otherwise than by way of problem, whilst he names it immortal and eternal. Indeed, one of them we find who denied there was any such thing as a Soul at all—Aristoxenus³ was this prodigy. But so averse were the rest from believing the Soul could die, that they rather held a transmigration.

Nor is any man so apprehensive of the body's corrup-

² Aristotle de Gen. An., l. ii., c. 3; lib., iii., c. v.
³ [A philosopher and musician, first writer on music (about B.C. 320): taught that the Soul was merely the harmony of the nerves and muscles.—Cic. Tusc., 1; Lact. de Vit. Beat., c. 13.]
tion and the dispersion of its materials after death, as of his losing his being, sense, and knowledge, which being no part of body or matter, but quite of another kind, shows that we ourselves imagine strangely of some existence after life. Our very wondering and admiration at any great and unusual thing, told, read, or fancied by us, shows something to be in us of more great and noble; and that, however small and inconsiderable in bulk and stature, we comprehend such immense and stupendous magnitudes—bringing in all nature—all we see and all we do not see, even the interminable space itself—spirits, intelligences, and all we have hitherto enumerated, of high and abstracted, and that enter not under the criterion of our senses—in a word, this Soul of ours raises herself into the horizon of the intellectual world, observes the motions, magnitudes, distances, and influxes of the celestial bodies, visiting and pervading the universal phenomena. Add to this the inconceivable pernicity of thought, passing (as we said) from the centre of the goodly machine to the sublimest star in a moment's time, and can penetrate the adamantine doors of the Empyreal.¹

Another argument may be, men's desire of perpetuating their name, families, and works—continual thought of the future, and natural apprehension of another state, and of conscience, though under no awe of human eye or notice (of which more in due place)—that

¹ Tantæ celeritatis, ut uno temporis puncto cœlum omne collapsit, et, si velit, maria pervolet, terras ac urbes peragret, &c.—Lact. De Opif. Dei, c. 16.
the Soul is qualified to take cognizance not only of a few scattered particulars and finite notions, but of the universal *cyclopede*, the sublimities of logic, physics, metaphysics, the *acroamatic* and profounder mysteries of philosophy, explicating things by their respective causes. She apprehends compound and abstracted mathematics, with all her apodictical canons and speculations, and from *postulata*, *petitiones*, and a long series of premises and a train of causes, solves theorems, problems, angles, and intricate figures of geometry—the stupendous effects of numbers and algebraical supputations—can form axioms, and comprehend first principles, and is certain she does do all this, think, and exist, without the aid of corporeal species. She comprehends what is truth, what vice, moral and religious things, has a sense of her own excellency, the amazing notices of eternity and of God himself. Which all are things unelementary, incorporeal, and consequently immortal. In sum, no obscurity of the darkest dark, no profundity of the deepest abyss, no thickness, height, or depth, time, or place, obstructs the vast imagination of the human Soul, which passes, penetrates all things,

*..... et extra*

*Processit longè flammantia mœnia mundi.*

We might now proceed to those many stupendous inventions by words, languages, ciphers, letters, figures, pictures, hieroglyphics, the daily excogitations of artful

1. "Thus did he with his vigorous wit transpierce
The flaming limits of the universe."

Lucretius, book 1, translated by the Author.
productions in printing, shipping, gunpowder, clocks, mills, machines, and other automata; edifices, works in metal, glass, harmonious instruments, and a thousand other ingenios for use and pleasure—to name only the political sagacity of institutions in government, laws, poetry, rhetoric, &c., which, though noble and becoming, are yet inferior to what we have enumerated. All these, I say, the rational Soul of man brings and reduces into an atom; and all that moves, into that which is of itself immovable, and never stirs from her place.

It is, in earnest, a surprising thing to behold a comprehension so vast, so obsequious yet to the laws of a matter so limited! A being so noble, espoused to the interests of a frail and wretched body, that has no relation to her, no proportion to one so narrow and confined! Wherefore, the difference is no less infinite between their natures: for, if the Soul be mortal, she must be material, which all we have said proves it not to be: and if composed of atoms, those motions and different configurations must also produce the noblest and most exalted thoughts; and if these particles chance to alter their course, so must our notions likewise. And thus, all false principles become false and erroneous rules, misleading us in all the researches we have so industriously made, not only of a Deity, but of all things else in nature whatsoever; so as two and two would no more be four; all would be uncertain, absurd, and extravagant: so necessary it is well to establish the immortality of our Soul and her prerogative, by all possible instances, and as we have, by irrefragable and undeniable ones.
As to the text 1 we named, wherein the fate of animals was made the same, man's indeed resembles that of brutes, as he gives reins to his brutish appetites, obnoxious as he is to the same accidents and events, the same infirmities and diseases: both descend into the earth, the common mother: so as, if one were to judge from the external face of things, and the promiscuous contingencies that happen to beasts and men, only by the force of our own ratioconization from external appearances, it would be somewhat difficult to determine what became of human Souls. But it is evident as the meridian Sun, that the penitential King (to whom the libertines, those hardly rational cattle, appeal) speaks only in the person of impious and wicked men, judging from such fallacious phenomena, and does not in all that passage so much as touch the intellectual soul; which he reserves to another place, namely, to chapter xii. And therefore, Theodorus 2 (who rejected this divine book) foully mistook the matter; for here the wise king, resuming the person of a religious man, tells us quite another story, namely, that at death dust shall return to dust and earth, as it was before, but the spirit to God, who gave it. 3 He spake before of our natural bodies dissoluble into the common principles, the sensible life vanishing into the same air; but here of a higher flight: "Who knoweth the spirit of man that goeth upward, and the spirit of the beast that goeth downward to the earth;" 4 than which antipodes are not more opposite.

As to the text in Wisdom, cited also by us, what more perspicuous than the author speaking in the person of debauched and abandoned epicures, who, set upon mischief, violence, and injustice, were resolved to take their fill of sensual fruations, without regard to any future state? He tells us that God created man to be immortal, and made him to be the image of his own eternity, plainly affirming the spirits of the righteous are in the hands of God, where no torment shall approach them.

In the mean time, admitting the rational Soul to be of a pure, subtile, and ethereal nature—I say, supposing it not totally immaterial—[bodies by human art and conditure having been made resist putrefaction thousands of years, and subsist without a soul, as we find Egyptian mummies and the like to have done] I can see no reason why a Soul, separated from the body, may not by divine art be preserved, freed as it is from the more gross and corruptible elements; the same infinite power being able to render it as indissoluble and immortal as the more immaterial spirit, and as He certainly will do at the resurrection.

But there are so many cogent arguments to convince men that, when all is said, there is no place left for a considering person to doubt of the Soul's both present and future existence, even from arguments rationally deduced; seeing that which is destitute of bulk and quantity, and to which no necessary is deficient, must needs be imperishable; because it has not the power of

1 Wisd., ii., 3.
past existence; nor can that be destroyed or corrupted, which, being insectile, has nothing to divide or oppose it. It is separate from all extensible matter and motion from another, and is therefore a self-mover, invulnerable, impassible, immortal; an act, not a virtue or power only; and, being an act, is incomposed, and, could she die, would be annihilated, and something become nothing, and nothing something, by some natural power: whereas, nature teaches that whatsoever enjoys its own existence, will remain so till a greater force expel it. And the Soul, thus indivisible, excluding all parts of quantity, no rarefaction or condensation, alteration of temperament, heat, cold, fire, or water; nor tyranny, of whatever quality, or power less than His who made her can dissolve her.

Moreover, as we showed, such a substance as performs its operations without the body, subsists without it; and so does the Soul, as oft as it is in real extacy and raps, and she conceives things abstracted and universal, so that she needs no other proof for immortality.

The essence of things is defined by their operations, and the understanding and the will take place here: were that a perishable or material thing, perishable, sensible, and material things would improve them, which we find they do not. Material faculties lose their energy by the vehemence of their objects, while the Soul grows more vigorous and enlarged by contemplation, acting and re-acting beyond all organic power.

All material operations are, as we have showed, confined, so as our sensitive faculties can rise no higher
than the spring of matter: but so can the Soul, not only understanding and receiving all corporeal substances, which corporeal faculties cannot do (for the organ must be clear and colourless to receive coloured objects); but comprehends spiritual things, and sees within the veil. Whence it is evident that, as principles are in themselves incorruptible, so is the Soul; and that what is essentially life to others does never die or grow old; for, whilst corporeal things impair with time, our intellects improve.

It is, therefore, a noble and highly necessary belief, that the human Soul is immortal. Could we else imagine that Curtius, Regulus, and those other heroic persons, even amongst the Pagans, would so generously have hazarded and cast away their lives for their country, parents, friends, had they not some glimmerings and hopes of immortality, and not altogether for glory, and empty fame, which they know in time would vanish? But, as it was the universal voice of all nations, it was doubtless also implanted in them by Nature herself. Thus, to the sense of Solomon:

\[
\text{πνεύμα μεν πρὸς αἰθέρα,} \\
tὸ σῶμα δ᾽ εἰς γῆν.\]

It shall go from whence it came, earth to earth, ashes to ashes, the Soul to Heaven.

We might fill a first volume out of the writings of those famous men on this immortal subject. And he that shall turn over Cicero and Seneca alone may be

stored with variety of suffrages to make our modern atheists blush. That the Soul returns to Heaven, whence she descended, was the firm persuasion of that excellent heathen, and another honest stoic,1 “Death is not an evil; it is the nativity of eternity; we are all allied to God, from whom we came, and to whom again we go, let us once shake off the pressures which bear us down.” And what if I should extort as much out of a professed epicure himself:

Denique cælesti sumus semine oriundi;
Omnibus ille idem pater est.2

Thus, too, Manilius,3 to the same effect:—

An dubium est habitare Deum sub pectore nostro,
In cælumque redire animas, cæloque venire?

Whence Seneca doubts not to call the Soul a God;4 so as Livy tells us the Romans consecrated a temple in the Capitol, by the name of Mentis Ædes: and, though she be no God, she is His image, and that image imported not so much His exterior figure as His immortal nature. To this purpose, Plutarch,5 citing a verse from Pindar, doubts not to bring the Soul’s descent from

---

1 Epictetus.
2 “Lastly, we all from seed celestial rise,
   Which Heaven, our common parent, still supplies.”
   Lucretius, lib. ii., 990.
4 Sen. Ep., 120.
5 “Our bodies shrink to dust by death’s decree;
   The Soul survives, and fills eternity.”
   Dryden’s Plutarch, Life of Rom.
God, and that she returns to Him again, after separation and purification from the earthly dross which hinders her ascent. Whence that of Heraclitus, *anima sicca sapientior,*¹ dry things being less clogged and more disposed to take wing. So fixed was this good man in the belief of the Soul's survivance, that he thinks the spirits of virtuous and religious men are not only transmitted out of brave and worthy persons into heroes, but, passing through those demi-gods, become deified, and even Gods themselves.

But, to render this notion safe and accommodate: though the human Soul be said not only by these extraordinary enlightened Heathen, but by the Sacred Oracle itself, to participate of the Divine nature, it is not to be understood of the communication of the Divine substance, but for similitude of properties and Divine gifts; which, though resembling, are yet but faint shadows and umbrations of that sublime nature; and so, verily, good and excellent men are rather the offspring and sons of God, nay, one spirit with Him; not, I say again, by essential propagation, but a certain virtual inhabitation.²

And, if this be not sufficient, turn over Plato, in his *Phaedo,* introducing Socrates dialogizing with his friends, a little before he drank the fatal bane—than which there is nothing more to be wished to assert this article, even from the voice of a mere natural man, and to demon-

¹ ["A dry soul is the wisest"—quoted by Plutarch, (*περὶ σαρκοφ.*) in a similar sense.]
² S. John, i. 13—viii., 17; I. Cor., vii., 17, &c.; II. Pet., i., 13.
strate that he is not a mere piece of organized matter, or prettily contrived puppet only, but a vessel containing a sublime and immortal substance. Thus, though with Tertullian\(^1\) we find, indeed, that the Soul's existence after death is not to be learned from the schools of philosophers, but from God Himself; yet the light which these men had was consonant to the truth, and haply at first derived from the holy prophets themselves; so generally they spoke their sense. And, as we affirmed, even Aristotle himself\(^2\) (whatever some pretend) where he distinguishes of the vegetable, sensitive, and intellectual Soul, acknowledges the last, not only not to proceed from matter, (or using any organ) but to be plainly divine, that the agent intellectual is separate from matter, and immortal:\(^3\) and the question he makes in that first of Morals to Nicomachus, Whether the dead have any perception, sense, or concern for their surviving friends, he concludes with the affirmative, which could not be, unless their souls were in being. In good earnest, so poorly is man gratified with sensual objects, that the whole world is not large enough to satisfy so much as one poor sense, the eye, single as it is, and but an organ of the body only; and, if whilst in the body we cannot attain what we long after, we shall certainly out of the body; since God has given no inclination to His creatures but what is profitable and necessary: and, therefore, shall either now

---

\(^1\) De Anim., c. 4.

\(^2\) De Gen. An., c. 3, and De Anim., l. 3, c. 5.

\(^3\) Metaphys., l. 12, c. 3.
or hereafter be satisfied: otherwise, they should be made in vain.

Now, there is nothing the Soul of man so much desires as immortality, and a future happy existence. Besides, it is natural for us to believe and hope it, and hardly possible for us to think or believe that a time will come, when we shall cease to be. What, therefore, is natural, is certainly true; for, were immortality supernatural, we could have no comprehension or notion of it, nor fancy what it were; which yet we can and do easily conceive. These impressions were not given to abuse mankind, seeing God created all His works in perfection, and made not that to be mortal, which he has capacitated to become immortal; or given him such impetuous desires, noble ideas, and an industrious pursuit of virtue, in hopes of attaining felicity without effect.

We have already spoken of his secret desire of perpetuating his being and succession, his insatiable thirst after fame and glory, his ambition of leaving some permanent memorial behind him, &c; and that not so much to satisfy others, as out of a secret hope and imagination at least, that the good he does here will turn to his account hereafter; not forgetting the inexpressible dread of wicked and profligate men, in affliction, and their last agonies, betraying their apprehensions and fears of a future state, in spite of all their hectoring it in prosperity. So wretched a thing it is, so to have lived, as to have no refuge from anxiety and torment, but annihilation. It was, therefore, the brave conside-
ration of Cyrus in Xenophon, and of Cicero and So-
crates, the nobler Greeks and Romans, to wish that
their souls might survive, and the best and wisest of
them believed it too.\footnote{Si in hoc erro, quòd animos hominum immortales esse cre-
dam, libenter erro: nec mihi hunc errorem, quo delector, dum
vivo, extorqueri volo; sin mortuus, ut quidam minuti philosophi
censis, nihil sentiam; non vereor ne hunc errorem meum mortui
philosophi derideant. (Cic. Cato Maj.) “If I err in believing the
souls of men to be immortal, I err gladly: nor do I wish this
pleasing delusion to be rooted out, while I live; and if, when
dead, I lose all feeling, as certain petty philosophers determine, I
have no fear that after death they will laugh at my mistake.”}

So confident were the very Heathen world, and yet
is, of a being after this life, that it is reported of the
Chinese, and those of Japan, that they give letters of
credence and exchange, and make provision for their
friends and relations in the other world. What was
else the meaning of their funereal pomps, their killing
slaves and cattle, nay, the combustion of the Indian
wives at the funeral-pile of their deceased husbands, and
the burying of so much treasure with them? But of
this we shall have further occasion to enlarge, when we
come to show that, as this principle and soul of man
survives the body, so is she in expectation of a due re-
ward and a just remuneration in another state; wherein
since the body as well as the soul shall both participate,
having both been assisting to each other whilst united,
that body shall likewise be joined to it again, never
more to separate, after a miraculous Resurrection.
SECTION II. RESURRECTION.

But, indeed, the belief and demonstration of this was so incredible and new a doctrine to the wisest of Heathens, that when the great apostle of the Gentiles began but to mention it among the learned Athenians, some mocked, what will this babbler say? others, more curious, desired to hear it again, taking it for some strange and unheard-of God; whilst his business was to let them understand that the God, whom they did not know, and yet erected an altar to, commanded all men every where to repent, after his so long connivance at their ignorance and superstition; forasmuch, He had appointed a day in which He would judge the world in righteousness.

And where, indeed, is the difficulty to those who subject all things to the omnipotence of God, and that are daily spectators of so many strange things in nature, not only illustrating, but some of them even demonstrating, the possibility of the Resurrection? The day succeeds the night, in which it is, as it were, dead: and the sun sets as buried under the earth, and rises in the morning; we sleep and die in the nearest representation of death, and awake in a resuscitation, every time we take our natural repose; and though our bodies be not then dissolved, a thousand less corruptible are that die, and are buried, and re-flourish again after a tedious period; during which the hardest seeds corrupt and are turned to mucilage and rottenness, mortified with frosts

1 Acts, xvii.
and covered with snow as with a winding-sheet—yet rise again, in the spring, from squalor and putrefaction, a solid substance—from dissolution of parts and sad deformity, to such vigour, beauty, and perfection, as even Solomon in all his glory was not clad like a lily of the common field.

This St. Paul held so convincing an argument, as he fears not to call him fool that seemed but to question it. For, from what inglorious and dirty rudiments do those daily miracles of the parterre result, whilst divers of their principles are so invisible, for a time, at least, that they seem utterly to be lost! Thus, the corn which feeds our bodies, and whose paste, or dough, of all things, most resembles our flesh, revives and multiplies; and he who sows, sows in hope; and after many a nipping frost and severe winter, it springs afresh. But that which was sowed is not quickened, except it first die;¹ nor is it the body it shall be: but bare grain, sown in corruption, raised in incorruption; and so shall our bodies be sown in dishonour, raised in glory; sown in weakness, raised in power; sown a natural body, raised a spiritual. For this corruptible must put on incorruption, and this mortal immortality, and death itself be swallowed up in victory.

Consult we nature again, and we find several birds and beasts and innumerable insects pass, not only vulgar changes, but the silkworm, whose death, tomb, and resurrection, are plainly stupendous. And if thus in the works of nature, why should we doubt but the

¹ I. Cor., xv., 36, 38, &c.
God of nature, who framed us out of nothing, should even from nothing restore and make us something? It being so much the more difficult to give that a new being which had none, than to bring it into a second being, which has matter prepared for it before.

It is a known maxim in philosophy, and of unquestionable event, that the corruption of one thing is the generation of another. And can we believe that man, who is lord of all God's creatures, should expire and perish, and produce nothing but worms and silly vermin? Is it probable, or, indeed, imaginable, that God should thus restore all things to men, and not man to himself? Were there no other consideration but that of the principles of human nature, of the liberty and remunerations of human actions, and of the mutual revolutions and resuscitations of other creatures, it were abundantly sufficient to render the resurrection of the body almost demonstrable. Besides, howsoever the body's outward frame fall in pieces and to dust, the principles remain in the element; and, though our dissolved particles be scattered and hid from us, as to the places where they lie neglected, He who made them knows where to find them, and where to collect every individual atom, and how to re-unite them, not only in the same, but in a much more beautiful form. The matter, I say, remaining, is still as capable of resuming the pristine specific form and shape.

Nor is it yet a new-created body, but the same that dies,¹ the same that worshipped God, that died and

¹ Job, xix., 25, 26.
suffered for him. And why should not the same soul resume the same body, and not a brute's, as the Druids and Pythagoreans held? Since, otherwise, it were no resurrection, but a renovation, or recreation, rather, and be such as never was before, and so not rewardable, with justice, for merit, or punished for crimes. The same numerical person shall, therefore, rise the same in identity, seeing, properly, nothing dies, or is raised, but the body; for the Soul never dies, or is buried; and all who were raised by Christ on earth, rose in the same body. But the change to be made shall not be altogether of this nature and substance only, but of the same condition and quality.

We behold how chymists resuscitate the forms of things, to all appearance, out of real corruption and confused chaos: what more wonderful than the process on crude mercury? now fixed, then volatile; now quite altered, anon reduced again through a thousand metamorphoses and changes. Things visible are made invisible, and visible again by the art of fermentation, circulation, putrefaction, cribration, and even recineration, raised from dust and ashes, defecated of their former dross. Does man go thus far by his skill in pyrotechny, and shall not God do more, who is the Cosmotect?

Now, in what body St. Paul above has taught us, and St. Augustine, that we shall rise in a flourishing and mature age; not only men, but little infants, even

---

1 See Tertull. Apol., c. 42.
2 De Civ. Dei, lib. iv., c. 14, 15.
to the stature that Christ, our Head, attained, and that in substance, not deformity; forasmuch as infancy is imperfection, age, corruption. Wherefore, the body shall be a glorious body, endued with all spiritual qualities of illumination, agility, and aptitude to ascend and pass regions of infinite distance and variety; and that as well women as men. Those who first published our Lord's resurrection, shall doubtless also partake of it. Verily, were it not for this hope and assurance, how disconsolable would be the loss of friends and relations! This comforts us in afflictions, encourages in sufferings, incites to glorious actions, and even to die for our country and the public good. If the opinion of a metempsychosis, or empty fame, which is but the breath of ambitious man, engage him to so many brave and heroic exploits, what should not these glorious considerations!

Felices errore suo, quos ille timorum
Maximus, haud urget lethi metus; inde ruendi
In ferrum mens prona viris, animæque capaces
Mortis, et ignavum est redituræ parcere vitæ.

1 De Civ. Dei, lib. xxii., c. 13, &c.
2 “Et qui utrumque sexum instituit, utrumque restituet.” (S. Aug. De Civ. Dei, lib. xxiii., c. 17.)—“He who appointed both sexes shall restore both.”
3 “Thrice happy they beneath their northern skies,
Who that worst fear, the fear of death, despise;
Hence they no cares for this frail being feel,
But rush undaunted on the pointed steel;
Provoke approaching fate, and bravely scorn
To spare that life, which must so soon return.”

Rowe's Lucan.
In a word, if God be Almighty, as He certainly is, and knows what is to be done, as he also does, and has power and skill to do as He pleases—to Him nothing is impossible. He who knows every atom, every single dust, tomb, and grave, and looks into the darkest abysses and the most secret receptacles, where men are sleeping in their dissolved causes, can fetch and summon every minute particle, and join them together as before, and give them new life, and raise them up; and the man who once was dust, become man again; seeing whatever we lose in death is not lost to God: and, though our parts be dissolved, yet they perish not, but are reposed, and in safe hands.

Let us examine history and matter of fact. We have the resurrection of One, who had no less than five hundred testimonies of it. Christ, the first fruits and head, being raised,\(^1\) needs must the members follow. The holy Apostles touched his body, heard him speak, saw him eat, nay, conversed with him, not for a day or two, but during the space of forty, and then beheld him ascend above the clouds. And, though Felix accounted St. Paul a madman for affirming it, the evidence was so full and undeniable, that it obtained credit, and prevailed in spite of all contradiction, not of credulous and easy men, but of the most learned, sober, and inquisitive persons in the world, and such as joined the most maliciously to detect the imposture, had there been the least prevarication in it. Therefore, to disbelieve this

\(^1\) I. Cor., xv., 6.
truth is not to discredit Scripture only, but all good history, ancient and undoubted records of the most concurrent and disinterested testimony that ever was, as in due place we shall come to prove.

In the mean time, we find holy Job so early of this faith, and so peremptorily asserting it, as that St. Jerome tells us, no man ever since our Saviour's real resurrection could speak more expressly concerning it. It is doubtless, if not altogether, the most ancient record extant in the world. Nor sooner hear we of the death and dissolution of mankind, but we have news of his reviving, and this by a Gentile, too, to show that they, as well as the Jews, were to enjoy the fruit and benefit of it.

But though Pliny, indeed, and some philosophers, esteemed it impossible even for God Himself to raise the dead, the same they held of a Creation *ex nihilo.* And, I know, Socinus, the Quakers, and some other sectaries and fanatics, have applied those words of Job to a temporal restitution of health and reparation of his losses: but the interpretation is forced, wrested, and plainly absurd, and contrary to the whole stream of ancient church, the clear sense of the sacred text, and the title he has given of a Redeemer, which shows he understood it of none but Christ. That it was revealed, likewise, under the Law, we learn the Sadducees to have erred, because they knew not the Scriptures, nor

1 Exod., vi., 4; Psalm xc., 3; Isaiah, xxvi., 19; Dan., xii., 2; Matt., xxii., 31.
2 Job., xix., 25.
the power of God, whilst the Pharisees maintained both; that is, the being of separate spirits, and belief of the Resurrection. Hence that extreme care and solicitude, and cost of embalming, and funerary rights, as well among Pagans as Jews, having respect to a future state after this life.¹

SECTION III. A FUTURE STATE, AFTER THIS LIFE.

We read not of any so barbarous and ignorant, but who had, at one time or other, notions of good and evil, felicity and misery, reward and punishment, according to demerits; for such there were ever amongst the most savage of the New World, who never (that we can tell) had any traffic or commerce with the Old; and whoever has but a suspicion of this, does consequently fear or virtually acknowledge a supreme justice. But of this hereafter.

The natural appetite which all men have to knowledge, and the complacency we take in contemplation, the restless and never satisfied eye and heart, with riches, possessions, beauty, honour, learning, power, and whatever else this world is able to afford, whilst all other creatures are contented with food and natural things, tell us aloud, that there is something still behind the curtain of more perfect and consummate wanting, to fill our capacities and complete our happiness. I say, besides the sentences of wise men and divines, our natural sentiments of eternity and another state, our immense desires of lasting fame and of leaving some-

¹ Tertull. Apol., c. 42.
thing of memorable behind us, and, above all, the remorse, the harrowings and strokes of conscience, or approbation and satisfaction, upon the doing of worthy or wicked actions, accusing or excusing, according to the obliquity or rectitude: and that which we apprehend and would reconcile, when in imminent peril and near dissolution, not to be bribed or any ways pacified with all the delights and charms of this world, not to be put off by the most potent monarch—are all of them demonstrations of a future state. Besides, all things here are in continual flux and vicissitude, nothing permanent; no prince, no private person, nor state of life, assured one moment. It must be, therefore, somewhere, and the perfection not of a single endowment only, but of our entire nature, which can make us happy, and which, not to be found in this, must in another state.

If there be anything desirable beyond this life, and what this world affords, as we all confess and find there is, it is certain it exists and is in being somewhere; seeing God has created no appetite but what He has provided something adequate to satisfy and fill. Had any mortal man been the first inventor of the opinion that there was another state of things, and a life to succeed this, he would most undoubtedly have been named, and assumed it to himself that he was so owned, and gloried in it; so that it is impossible so vast a sect should have no known master among men. This makes it certain, then, that it came from none but God, and could be no otherwise derived than from Heaven.
What can be the reason of the universality of this belief, but our fears and doubtings, or rather our undoubted apprehension of a being, when all our actions shall be scanned, approved, or condemned? Was there nothing to remain after this umbratible life, why are men, above all other creatures, so solicitous for nothing? Whence proceeded the notion so early, so generally? Why all this dispute among both learned and unlearned, barbarous and civil? And why, in our most decrepit age, is the Soul most vivid and quick, and most greedy of knowledge, and less and less satisfied with material speculations.

The truth is, without this there could be no living in the world, no government, no society. Paradise and Hell, reward and punishment, as the Rabbies wisely say, are the two pillars that support and bear up the world; and God Almighty saw it, and not the politics of men, as Atheists would make us believe.¹

Hence the adoration of departed heroes and apotheoses among the ancients, believing them to survive their body; hence their reports of the Elysian Fields and Infernal Shades, of Minos and Rhadamanthus, Furies and hellish companions, and all that they have spoken of retributions, which both philosophers and poets either believed or feared. They tell us of the Stygian Lake,

¹ Non leve momentum apud nos habet consensus omnium, aut timentium inferos, aut co lentium. (Seneca, Epist. 17.) "The universal consent of mankind has with me no little weight, whether it be of those who fear, or those who fondly dwell upon a future state."
dark and gloomy recesses, of Ixion wheels, tantalizing and horrible torments, and vultures feeding on the liver, intimating the restless stings of conscience; Ætnas, Vesuviuses, Heelas, and other volcanoes, and perennial burnings, showing the possibility of eternal fire—a true and real fire,\(^1\) whose smoke ascends for ever—the never-dying worm, anguish of mind—the killing thought of eternity and despair. Oh, inexpressible misery! no release till the last mite be paid, which can never be; there being no repentance wrought in those flames, no purgation of sin, no sanctification of nature, no justification of person, and, therefore, no salvation, without the mediation of a Saviour, who will then have given up and resigned that office; and so no remedy for ever.\(^2\)

The Socinians, indeed, pretend, and would fain have, that the eternal death, threatened in Scripture, signifies annihilation only, but know not how to avoid that expression of everlasting fire.\(^3\) The Jews believed a second death; though more obscurely then intimated than afterwards. The weeping, wailing, and gnashing of teeth, was by our Blessed Saviour frequently spoken of to them upon several occasions; as also the Apostles of our Lord, of a mist of darkness, by St. Basil termed, an obscure fire, tormenting and heating, without the least

---

\(^1\) Isai., xxxiv., 10.

\(^2\) "Nulla major et pejor est mors, quàm ubi non moritur mors. (S. Aug. De Civ. Dei, l. vi., c. 12)—“No death is so terrible, as that state where death never dies.”

\(^3\) S. Matt., xviii., 8—iii., 15; Deut., xiii., 5; Isai., xxii., 14—lxv., 6.
cheerful light. And this did the Heathen call Tartarus, (so Anacreon, the debauched poet, fearing to die, lest he should be condemned to it) for they feigned the place a dismal, uncomfortable den, in the bowels of the earth, and called it the Abyss, the Infernal Lake, Hades, (which Plutarch says is a dark pit) and so Sheol's name also mentioned in Scripture, and the Lake, a fiery gulf, whither, likewise, the devils were sent. The valley of Hinnon was a type of hell, for the cruelty of the idolatrous Jews offering their children and human sacrifices to Saturn; it was a deep bottom, where they flung all their carrion, as described by the Prophets: enough and sufficient to prove, that they all believed a state after this life, and that there is an account to be given of our actions.

SECTION IV. THERE IS AN ACCOUNT TO BE GIVEN OF OUR ACTIONS.

But, because sentence is not immediately executed against evil men, therefore, their hearts are fully set and bent to do wickedly; they wonder that some ghosts

2 [Sheol, a Hebrew word, signifies "The Invisible state of the Dead," in general. (Dr. Parkhurst's Heb. Lex.) The seventy translate it by ᾠδης, (Hades) which, Dr. Campbell thinks, should never be rendered Hell in the New Testament, as it is now understood; though in its primitive signification it answers to Sheol.—See Dr. Camp., Prel. Diss., vi., p. 82.]
are not sent from the other world, to give them warning and assurance of the being of such a place; and men would prescribe to the Great Arbiter of things what we fancy and would have. He must humour every one’s curiosity, not his reason only: we will have our senses satisfied; and, though that were insupportable to flesh and blood, should they be taken at their word, they call for they know not what, and will only trust their own eyes before the God who made them! We see not, indeed, these things, yet plainly perceive them; and innumerable most powerful operations are there, even in God’s creatures, which, to our senses, are invisible as the wind: and the sun itself, which makes all visible, does almost put out our eyes with its lustre, nor can we perceive our own souls, the only nearest and most considerable portion of us! What thanks, or reward, then, can those pretend for their faith and virtue, who will credit nothing save what they see and touch? What exercise of worth or goodness, when those who were every day witnesses of so many wonders and real miracles did not profit by them? We also daily behold them in the continued economy of nature, yet slight and pass them by; so that, should one rise from the dead, some would yet not believe.

If the excellent things proposed and expected, and the punishments of the other state to those who do well and ill, were not incitements to govern ourselves accordingly, what were the merits of faith, justice, charity, patience, and other virtues? Had goodness and virtue no other remuneration but itself, (which the philoso-
pliers hold sufficient) they must often act against their present interest, and what can that felicity be? And, therefore, virtue is not that happiness, but the way leading to it. Nature prompts to acts of virtue, and to preserve herself, but always on account of retribution; and God is a rewarder of those who diligently seek Him; there being no sign of universal justice in this world: and if there be such a thing as justice and goodness in the Divine nature, (as there certainly is) then must there be a reward for those who obey Him, and a punishment for those who do otherwise. The distribution is somewhere and at some time; for either there is a Judge of our actions, or there is none; and in case there be, He must be just; and then there is a trial to be expected, there being here no equal distribution at present, where for the most part wicked and ungodly men prosper. For man, being a free agent, capable of doing good, or evil, and consequently obnoxious to reward or punishment, and capable of another state in which to receive it; seeing, also, that in this life, not only good men pass unrewarded; and that some, again, are so notoriously wicked, as no punishment here is sufficient to chastise and reform them, such as pirates and sea-robbers, who cast so many innocents overboard, and spoil the labours of honest men; murderers, and persecutors, and haughty tyrants, that make invasions on their quiet neighbours, and begin unjust wars; that pursue men with malice, secret backbitings, and use devilish arts, perjury, and stick at no wickedness to compass their ends; and that many such are placed out
of the reach of common justice, such as those mighty ones, whose ambition and pride, lust and avarice, destroy whole nations, churches, and whatsoever is sacred. I say, seeing justice is so unequally distributed amongst these wicked men here, there must, of congruity and natural necessity, be a future calling to account. For Almighty God, being also a free agent, is not obliged to exercise either punishment or reward, seeing that would make Him a necessary agent; but as He has decreed and declared Himself, not in His Word only, but in the opinions and confessions of all rational creatures, Heathen, and others, who knew not the Scripture. And, though God might make this appear by examples in this life, He is pleased awhile to suspend it, having given mankind sufficient reason to guide himself by.

The discrimination here (all things happening alike to all) is very invisible as to good and evil events; which still renders it most agreeable to reason and justice, that there will be an after-reckoning; seeing the greatest punishment and most consummate happiness is neither sufficient to deter men from vice, nor to render good and righteous men perfectly happy and completely satisfied. All is here perpetually changing; nor prince, nor private person, nor state of life, afford one moment's repose. It must, therefore, be the perfection not of any single endowment, but of our entire nature, which can render us happy; and that is not to be hoped for in this life.

Jews, Pagans, Christians, believing that all things which had beginning should have a period, expected an
universal conflagration; the stoics, and divers philosophers, were of that faith—Plato, Aristotle, Diogenes, Laertius—that He who made the world was able to unmake and destroy it again. So the Poet:

"Una dies dabit exitio, multosque per annos
Sustentata ruet moles et machina mundi." ¹

And all this generally by fire, as may abundantly appear by the writings of Seneca,² Cicero, Pliny, Ovid, Lucan, the Sybils, from some tradition, most likely from the people of God. They held a general assizes, to which all should be summoned, and had serious apprehensions both of the power of natural conscience and exactness of Divine justice; whence it follows that there was to be a just retribution.

SECTION V. JUST RETRIBUTION.

At this Felix trembled, on S. Paul preaching of righteousness, temperance, and judgment to come,³ and that by reason of things of which he was notoriously guilty; which, being himself a Heathen, he would never have had any sense of, had he not both believed and feared the consequence. Wherefore, though the Athenian Philosophers derided the Apostle's doctrine concerning the

³ Acts, xxiv., 25.
Resurrection, they did not in the least contradict his denouncing a judgment to evil-doers, and the telling them there was a day in which God would judge the world,\(^1\) because it was a principle of their own before, and so rational a one to those who had a notion of God. Wherefore, Justin Martyr\(^2\) speaks of this as their universal creed, and so does Tertullian, &c., from their frequent expressions to that effect, upon occasion of any wrong or injury.\(^3\) But Plato surpasses them all, as cited largely by Eusebius\(^4\) and Theodoret.\(^5\) And the barbarous islanders concluded that vengeance had seized on S. Paul's hand, as thinking him some facinorous person, though he had escaped the shipwreck.

Were there not some dreadful expectation to come, Death would not be the King of Terrors: for it is the fear of dying after death which creates this fear. This it was that caused the wise Socrates to acknowledge that nothing would be so frightful to him as death, were he not assured of going to a great and wise God, from whom he expected to be transformed into some daimon, or god-like spirit, and speaks as divinely of the seclusion of profane and impious wretches\(^6\) from future happiness, as any Christian can do. Nor only Socrates,

but Socratic Cicero, Plutarch, and others, more than obscurely hinting at a notion of a right and left hand. And, indeed, the common proportion and usages in this world suggest some remuneration to men as they deserve; however, they too often miss of it, through the iniquity and injustice of men.

They did (as the patriarchs of old) confess that they were but strangers and pilgrims belonging to another country; for to this sense do both Trismegistus and Pythagoras, Jamblicus, the Greek satirists and poets, universally give suffrage more than once; it being, as we said, the catholic belief of the wiser Heathen. The expressions of Zoroaster are wonderful; so in the golden verses of Pythagoras, Epicharmus, &c. Let us hear Cicero for all: "Certum esse ac definitum locum in coelo, ubi beatiævo sempiterno fruantur." What can be plainer? The translation of Enoch, the rapt of Elias, &c., might possibly give hints to such as may have heard of these miracles, or lighted on the Old Testament; even among the Heathen, many of the curious, both of the Greeks and Romans, happening upon its translation into the learned tongue by the care and command of Ptolemy. And as for the Patriarchs, it is evident they did not at all reckon upon the transitory enjoyment of this life; which is very convincing, both against Papists and Anabaptists, in their exposition on the creed, &c.; as if

3 Gen., xv., 1; Job., xix., 29; Ps. xxvii., 13.
those holy persons had not some promises in the Old Testament, and most perspicuous ones in the New; besides what we find in the Maccabees,\(^1\) the mother encouraging her seven children to undergo their martyrdom. Let, therefore, these passages be consulted by the doubtful, and Mr. Thorndike’s *Epilogue.*\(^2\)

In a word, God, who has enjoined a law and duty, that duty performed and law observed, at the price of so much suffering and contradiction of evil men, infers a necessity of a future remuneration, for that which he suffers or falls short of here: because He, who is the fountain of justice, will maintain His character: “shall not the judge of all the earth do right?” Yes, yes; there will come a time, when all such as are in the grave shall hear the Judge’s voice, and come forth, as Lazarus did, they that have done good to the resurrection of life, and they who have committed evil, to the resurrection of condemnation.\(^3\)

And, though the heathen had no revelation of this article, their revolution of souls for animadversion and punition—their canonization and *apotheosis* of excellent and deserving persons—their belief that there was above a place not subject to alteration, where they lived and

\(^3\) John, v., 24, 29.
enjoyed perfect tranquillity—shows what they thought of hereafter. There were in Varro's time no fewer than two hundred and eighty eight opinions concerning the Sovereign Good, both what and where it was. The Epicureans placed it in sensual pleasure here; the Stoics, in morality; the Peripatetics, in philosophy and knowledge of nature, policy, and contemplation; the Academics, and Plato, who nearest approached the truth, in being united to the life of the Deity, abstracted from earthly and mundane things. And he was certainly in the right; for happiness consummate is that which comes nearest to the fountain of happiness, which is God.

For this the bodies of holy and just persons, as well as souls, being spiritualized and made incorruptible, shall be adapted when once they come into the world and region of spirits, and that all our parts and faculties are raised to their utmost enlargement and capacity; our wills perfected with absolute and indefective sanctity in exact conformity to God's will, and full liberty from the servitude of sin, no more perplexed about its choice, but enjoying a radical and fundamental emancipation, shall entirely embrace that consummate good! When all our affections shall be regulated unalterably, and our whole man happy in all the complements of solid fruition! When we shall enjoy an absolute exemption from pain, sickness, want, labour, possibility of sinning—unspeakable complacency flowing from all these perfections, and fruition of the Sovereign Being,

1 John, v., 24; I. Cor., xiii., 12; xv., 49; II. Cor., v., 4, 8.
the vision of God to continue eternally, as to their duration, in a standing calm, without any flux and succession of time! When we shall enjoy, see, and feel such glorious things, and hear words which are unutterable!

These contemplations are profitable to deter us from sin, and provoke us to holiness; since “without holiness no man shall see God.” They breed, and will nourish in us filial fear and caution, seeing we have to do with a great and just judge, one who will not be mocked—with a jealous God, a consuming fire—a powerful God, from whom none can deliver: and with all this, a benign and merciful God, ready to pardon those who return to virtue and sober counsels. The contemplation of a future life and happy eternity will excite our contention to enter into this happy state, and serve to wean our affections and inclinations from sensual pleasures, and to place them above with God, at whose right hand are pleasures for evermore—in sum, to take up the Cross, if it lie in our way, and to despise whatever obstacle we may meet withal, for the illustrious things which are set before us, and proposed to those brave and heroic souls that overcome.

The faculties of the human soul capacitate us for a more excellent and sublime condition than our fellow-creatures. Man looks upward, whilst they grovel and pore upon the ground on which they tread. His thoughts are of things abstracted, and meditate on the Divine Nature and attributes of God, disposing him to

1 Heb., v., 9; ix., 15; xiii., 14, 21.  
2 II. Cor., xii., 4.
religion and piety, and to notions and sentiments of nature totally different from things that perish.

Men could not so universally value goodness, and, when in sober thoughts, abhor villany, did not something imprinted within leave those characters. For no man thinks well another should do him injury; and there is such a thing as repose and satisfaction after a good and honourable, that is, after an honest and worthy, action. And all virtue has certainly a suitable-ness to some natural principle in us; as, on the contrary, the conscience of vicious men is a confirmation of it. Besides, every sensible being has an innate and insite love and friendship to itself; and so cannot but desire its eternal good and preservation in a state and condition most perfect; and man being composed of soul and body, both must be gratified in some place and circumstance adequate to their constitution and nature.

This notion of an after-being and retribution is still a corroboration of what we have all along been asserting, namely, of the existence and nature of God, prompting our due and solemn addresses to what is worthy of Him; else, it were a dishonour to offer Him any worship. But when we find a Being so transcendently perfect, as that it depends on nothing, and everything depends on it, this challenges our utmost veneration, and invites our love and service. We need, therefore, no compulsion to engage our affections, and to the belief of these things; seeing the light of nature leads us to them, whatever prejudices ill education, institution, or other averse accidents may have produced—through the
malice of seducing spirits—the ignorance and impiety of others; whilst even the idolatry and superstition they have introduced to obliterate and blot out of our minds the belief of a future state, were argument enough to convince men that there is one.

Egregious, then, is the madness of those who run the hazard, whether there be a life to come or not; since, if none, the rules and precepts required to attain the supposed bliss, are only such as a wise, and even natural man, would prefer, for the excellency and benefit of them in this present world; and so did Epictetus, Socrates, Antoninus, Seneca, Trajan, Severus, and several brave and virtuous heathen. But, in case it should fall out that there be another state and appendant retributions, what can be more deplorably miserable, than not to have lived well? And if this be not an undeniable demonstration, how counsellable it is to resolve upon a course of virtuous living, nothing in nature is.

To conclude, this doctrine is not only from the Scripture oracles, which we are yet to prove divine and infallible, but the dictates of nature and of nations; the Druids, Egyptians, Persians, Indians, of the old world, and those of the new.¹ In a word, the end of man is here, (and from all we have asserted) to lead a life proportionable to his worthy nature—in the knowledge of his Maker and His works—sense of the divine love, favour, protection, beneficence, and future well-being.

We see, then, the universal suffrage of the Pagan world: and should not we rather believe who besides

¹ Homer, Diog. Laertius. Plutarch Lucan.
all this have the Divine Revelation, (the wisest, most knowing, and best of men in all ages unanimously agreeing) than be carried away with a few fool-hardy and abandoned wretches, ignorant and debauched fops, who tremble to die in unbelief, though they seem to live in that magnificent and daring infidelity. There can be no rational, sedate, deliberate bravery and real courage indeed, but in such as have good and solid hopes of a future state and rewards for well doing: since, with Plato,\(^1\) death were an insupportable evil, without hopes of a better life, in almost the words of St. Paul,\(^2\) Verily, we do not think nor dare we trust it, the proudest of us all, that we shall one day be nothing, or happy if we continue wicked; for separated souls do undoubtedly survive, by virtue either of their spiritual and immortal nature, or by some Almighty Power preserving them from being dissolved, and are as really in some place, if not circumscriptively, as proper bodies are, yet determinately and really present somewhere, and not elsewhere.

In this state it is she also exercises her intellectual powers; when in death, passing by a real motion from body to such other receptacle her just Creator shall assign her, according as she is qualified for bliss or misery. Certainly, that substance which can and does exist without the body, and think, too, what she pleases, notwithstanding the frailties of the body, has a being after body; and the mere capacity of the soul to apprehend these notions sufficiently evinces that there is an

\(^1\) Phædo.

\(^2\) I Cor., xv., 19.
extra-mundane, posthume state and condition yet to come, all which gives presage of its sempiternal existence; and that, whilst the soul, having emanant acts not belonging to the body, even whilst she remains within it, can exist without it. And if no substantial entity can be annihilated, it must remain for ever. In vain were else all those ceremonies, and ablutions to lustrate, purify, and prepare the soul, which even the very Pagans used, directed only by the light of nature; so that this death of ours is, as Heraclitus truly said, the soul's life, and our life her death.1

These, (albeit there are many certain truths, which are incapable of proof from natural appearances, and discoveries cognoscible by us) to me are irrefragable and convincing demonstrations of something still in expectancy, of more accomplished and consummatoe of our nature, which this inextinguishable inclination and perpetually thinking substance aspires and breathes after; and of which we become the more assured as we improve our reason and our virtue—grow more religious and abstracted from the animal world. And that the essential man, the Soul, approaches nearer her restitution, by a thorough purgation from corporeal taints and impurities, and lives nobly under the power of godlike dispositions, and as becomes the dignity of his nature; preparing himself for that Dei-form, angelical, and bright condition, when all these impediments, that charge and clog us here, being shaken off and left behind, we shall be invested with the celestial robes, and

1 Plato, Phæd. Porphyr. de Antro Nymph.
by an union more intimate and mysterious, derive new life and knowledge from the fountain, or rather ocean-sea of all perfection. For thus the Supreme bounty delights to diffuse itself on the creature, without any diminution of his own immensity, or essential properties, which alone are intransient and incommunicable.

That God has provided so glorious mansions for worthy and holy souls, sufficiently declares how precious that substance is, and how dear to Him, which we, whom it most concerns, take so little care of. For, what shall I call that \( \omega\varepsilon\omicron\upsilon\ \mu\omega\rho\iota\varphi\alpha\varsigma \)?¹ not to say part of the god-like essence, with the Manichees, who dreamt that, when it left the body, it reverted to the Divine original:

Sive hunc divino semine fecit
Ille Opifex rerum.²

but, with St. Paul, a particle of His goodness and wondrous bounty, qualifying her to partake of the Divine nature.³ Still, as the image is ever inferior to the prototype, so is the Soul in respect to her Maker. She is, therefore, a similitude of Him rather, a divine rivulet or emanation, a beam of His splendour, like that of the sun, which makes day, without diminution of his glorious body. She is, doubtless, the most charming character of His image.⁴ Could we with mortal eyes

² "Whether with particles of heavenly fire
The God of Nature did his soul inspire."

Picart's version of Ab. Bannier.—Ovid, Met., lib. i., 80.

³ Zach., xii., 8.

⁴ Ad divinam imaginem proprius accedit humana virtus, quàm figura.—Cic. de Nat. Deor. "The divine image finds a closer likeness in human virtue, than in human form."
behold the Soul of some excellent and righteous man, how (like the Philosopher's naked virtue) would it charm us with admiration! And it is that which truly exalts our nature, and carries it up to those supernal mansions, and brings it into an assimilation of our resplendent Maker, and to an internal sensation of His infinite perfections. It is for this, and the life to come, so many brave souls have despised the delights and sweets of life and ease here, to embrace tortures, fire, racks, and gibbets, and even Phalaris's bull.

Man is the only creature that goes erect and looks up to heaven, as if he had nothing to do on earth but to set his foot upon it. His native country is above; his nature does not acquiesce in any terrene elementary thing; something there is he is still in want of, however, in the midst of fulness; for, wherever nature has left a capacity of receiving an increase of perfection from some other thing, there she has planted an appetite to enjoy it. And what can this be but an immortal and imperishable condition, which, not being to be found below, must somewhere be above? God has made nothing in vain; but so has suited objects to the nature of all, that there is nothing left us to desire which is not somewhere to be had.

There will come a time when what here we know but in part shall be entire and consummate. Faith and sanctity and other divine and passive graces and perfections, which lead to happiness and are things spiritual, are not imparted to us for no end, as they would be,

1 Ovid. Met., i., ver. 85, &c. 2 Diog. Laert. in Anaxag.
were there no future expectation. We cannot, therefore, reasonably imagine that the human Soul was sent into us with these infinitely abstracted comprehensions, without proportionable objects to fill all its powers, and leave no capacity unsatisfied one day, where the understanding shall be exalted to its highest pitch, and that, with an absolute and indefectible plenitude, large as our capacity, and permanent as our being.

There is in every one of us a certain innate aspiration to live for ever; and, as Cicero expresses it, a kind of natural augury of a future existence, and that we are but, as it were, in a stranger's home. Were our dwelling only in this world, we could have no idea or desire of any other being or satisfaction; so as that cannot in justice be wanting to the most excellent creature, which is not to the most inferior of them. Doth God care for oxen? Have not all their senses, that which even gluts them, whilst the rational Soul is no more contented than was Alexander with all the world. Other creatures are carried regularly and by instinct to the end they seek, but so is not man: he finds not his sovereign good here. So true is that of St. Augustine, "Fecisti nos ad Te, et inquietum est cor nostrum, donee requiescat in Te." 2

It is the weight of this body of ours, depressing and sinking the soul into matter, makes it so difficult to emerge; but then she is illustrious, when, withdrawing

1 Tuscul.

2 "Thou hast made us for Thyself, and restless is our heart until it find rest in Thee." Confessions, lib. i., c. i.
herself from this low converse, she shakes her fetters off, abdicates the senses, and, by a kind of anticipation, quits the lump of body before their natural dissolution; and she returns to her own substance when she returns to virtue.

This recess, and how to profit by it—ah, how delicious! how charming! When I consider the sacred pledge of a soul, con credited, as she is, by God to every man, and who expects he should return her Him again, pure and immaculate as He gave it her! What shall we say, when he finds her so deformed, so ugly, un clean, and unlike what she was, as to profess He knows her not? What excuse for the unfaithfulness of our trust, the vices contracted, and that from so noble and generous a stock, so celestial a race? That this daughter of God and sister of angels, capable of infinite happiness, should lose her birthright, be ejected from her native country, and made miserable to eternity! How has such a soul cause to reproach one, that, being of so free and ingenuous a nature, we should confine her to a sordid dungeon; bring her into such abandoned company, and never give her breath, or suffer her to act like herself, to trim and prune her wings! Contemplate from whence she came, and whither she should go! How may she not execrate and curse the flesh, that made her such a drudge; and that, when marriageable to an empire bigger than all the world, she has been betrayed to a poor and wretched lazar!⁠¹ When she

⁠¹ Of this vassalage of the soul, see Plato's *Phædo*, and Dr. Stillingfleet (Orig. Sac., l. iii, c. 3, § 17).
might have been learned, knowing, pure, and full of light, we have brought her up in ignorance, and put out her very eyes! When she was designed the happiest of all created beings, we have reduced her to this misery! But thus the lovely bride, this innocent and spotless virgin, is no sooner born, but see how she is bestowed! The living is bound to the dead; the clean and pure to a sordid and ulcerous companion! For, why else so low-spirited, so soon in wrath at every trifle; so fearful, jealous, and diffident, proud and covetous, voluptuous and vain? In a word, why do we lie in all this ordure and inactive sloth, when there is a kingdom before us, mansions of bliss, and the journey yet so short, so easy, so delightful?

But from this, and a thousand deaths besides, she only can be freed by breaking her prison-doors; not of the body, those walls of flesh, that environ her, but of the vices she has contracted, which is the Centaur that detains her in the labyrinth. On the other side, if so she have behaved herself, as by resisting the violence offered her, to recover her native freedom, and, emancipated from the tyranny she had been under, resume her virtue, she is immediately joined in second nuptials to a choice and glorious condition, where she now dwells no longer under subjection; but, being arbitress of her own happiness, and reinforced with uncontrollable powers, is able to vanquish all assaults, allay and charm those perturbations, that the slavish and mutinous passions at any time insolently raise against her. She controls inclinations, composes the lower appetites,
withdraws incentives, moderates and coerces whatever she finds exorbitant, and acts the part of a wise and sovereign princess, and sits like a queen indeed: *Et præstò est Domina omnium et Regina ratio*, as the orator has described her.¹

In a word, her government is natural and easy, and she becomes as happy, even in this life, as is consistent with the exercise of the noblest graces; presiding, as she does, like a supreme and universal monarch; and she steadily guides the reins, and enjoys a sweet and peaceful dominion, unless she suffer herself to be again corrupted by the fatal charms of a wanton prosperity, become remiss, slack her hand, and let fall the sceptre out of it; or that she meanly resign, make faint resistance, betray her trust, and, basely surrendering her title, consent to her own deposition. So true is that, *Faciē domabit cuncta, qui menti imperat.*²

But the rules and *arcana* of this polity ³ are not to be learned from the trivial usages and institutions of men, but from the Divine Oracles, and the mysteries of religion, the aids of reason, our conversation with practical virtue, (not feigned and theatrical) the exercises of habitual graces, and a purgative life. And thus a soul, by careful discipline, recovers herself, by original justice, inflexible honesty, and by what is true and really good; upon which there succeeds a certain heroical celsitude

¹ See this incomparably described in Cicero, Tusc., 1.

² "He will subdue all things easily, who has the mastery of self." See Prov., xvi., 32.

³ Tertull. de Anim., c. 4.
and serenity of mind, joys intellectual, and, in sum, a felicity the most consummate attainable in this life, because it is the life of God, and an antepast of Heaven. And this, the upper man, and noble soul, may attain to here; but then he must be vigilant, go continually armed, and be ready to encounter every thought and imagination of reluctant sense, and the first proclusions of the enemy. He must stand upon the guard, and examine all that passes, and, finding himself too weak at any time, call for aid from above. Let us hear the devout Simplicius,¹ though a Heathen:

"Oh, blessed fountain of light and immortality! who, to form us after thine own image, hast impressed on us that glorious character, an immortal soul; whose descent, being from Thee, has no superior but Thee, and is enriched with such transcendent faculties to think, discern, resolve, and, by thine Omnipotent aid and our endeavours, to pursue that which is best and most agreeable to the dignity of our being: let, oh! let not that emanation from Thee, given to be the conductress of our life, and guide to supernal mansions, be so immersed in sensual and brutish appetites, as, by yielding to the least of them, to sully that bright and illustrious mirror, which is the reflection of Thy resplendent face, or lose the prerogative with which we are invested. Clear, more and more, the entanglements of our understanding: dissipate the mists which our depraved affections benight us in; emancipate us of those weights which depress the nobler faculties, that, delivered from this

prison, freed of these ponderous chains, we may no more lie under the tyranny of our deadly enemies, the prejudices of custom, superstition, popular delusion, the love of pleasure, and the fugitive satisfactions of sense: but discerning the bright and glorious beam, from whence the soul enkindled aspires to be re-united, we may ascend the celestial tower, and cast down these usurpers, scatter the impostures, and at once shake off those impediments, which, through our sad and deplorable weaknesses, have hitherto prevented us; and the resplendent virtues of peace, justice, humility, charity, all the virtues, all the graces, with an inflamed zeal be again revived in souls devoted to Thy service."

It is the lower man, which, seeking to gratify and indulge its ally, the sense, is perpetually caressing it with objects which fascinate and deprave it; as more agreeable to it than what reason suggests, because the senses are gross and palpable. It is this which interposes the enmity between the flesh and the spirit, the brute and the man in us—disturbs the government, and mars the image of God's vicegerent, or rather the little Deity within us. Let us hear the devout Granada,\(^1\) resembling the human soul to her Divine Creator in substance, essence, understanding, and operation. "She neither eats," says he, "nor drinks, sleeps, nor is visible; she is immaterial, and in every individual simple and but one: God is a spirit—so is the soul; invisible—the

\(^{1}\) "El Amor de Dios" — a Dominican, one of the greatest ascetic writers of Spain, born in 1505. See Nicolas, *Bibliothec. Hisp. Biog. Univer.*
soul is so; immortal—so is she: God is an Intellectual Spirit—so is the soul; has freedom of will—she has the like: God is holy, just, and good, and so would the soul be, too, but for the Tempter; nor is she, for all this, without some footsteps and traces of those virtues. And as to her essence and operations, God is simple, indivisible, and so is the soul: He is all in all, gives being to all, and, being but one, operates in all. In like manner, is the soul but one, simple, indivisible, and spiritual, working all those different motions in the little world, our bodies; giving form, being, life, to all the functions, senses, organs, in ten thousand different offices; so as, albeit angels may more peculiarly resemble their Maker, because, being peculiarly spiritual, they have no commerce with bodies; yet, considering the several operations of the soul in the body, she seems, in truth, to be more like Him than are those glorious messengers themselves, and is His only representative here below."

Indeed, God alone is infinite and eternal in all acceptations, having neither beginning nor end of days; but so is not the soul, unless as to its capacities of duration, and manner of understanding; forasmuch as there is nothing capable to fill and satiate her but God Himself, in whom only is all fulness; and she still desires to know and to learn more; so that in the soul of man there is an infinite faculty, which would have no end or limit even in this life, did not death interpose, and put a period to her external operations: the internal never die.
Thus, is the soul the type and lively character of her blessed Maker; not as rational only, or of mutual faculties and substance, in which many vile and profligate men, who pervert their faculties, dedecorate and pollute themselves, (becoming rather so many images of the devil) frequently exceed the best of men; but in her rectitude and pursuit of virtue, justice, fortitude, temperance, meekness, charity, and as she is supernaturally enlightened. So, indeed, the understanding, will, conscience, or intellectual recorder, renders us, like our Creator, symbolical of a kind of Trinity. "She will deserve eternal life," says Lactantius, "if she betray not the succours which reason offers, and which God has reserved to assist her; she can and may vindicate her dominion, maintain her empire, and oft has freed herself from those usurpers, escaped the inescations of sense, and reduced her vassals to obedience." And yet these dangerous enemies, the objects of our senses, and consequently of our passions and affections, are not altogether to be abandoned and quite obliterated. They should not, I say, be quite extinguished, but are hugely

1 Gal., v., 13-26; Ephes., iv., 24; James, iii., 17, 18.
2 "Qui si delicatus magis ac tener in hâc vitâ fuerit, quàm ratio ejus exposcit; si, virtute contemptâ, desideriis se cariûs addixerit, cadet et premetur in terram. Sin antem, ut debet, statum suum, quem rectum sortitus est, promtè constanterque defenderit; si, terræ, quam calcare ac vincere debet, non servierit; vitam merébitur sempiternam.—Lactant. De Opif. Dei, c. 19.
useful to exercise and prove us; yea, and may be qualified, as far as is necessary, for the support of life and the comfortable fruitions of it; since, being no other than the motions of the soul herself, inciting us to laudable and worthy actions, they come to be perverted only by being too much caressed and indulged. We are not, therefore, to blame our appetites, or passions, which God has ordained to be the scenes of our obedience, and as being but the natural effects of that animal spirit in our bodies from external objects; but strive and endeavour that we do not over-cherish their emotions and solicitudes, in our wills and fancies, till they become exorbitant and unreasonable, or judge and determine of things through those false and delusory optics. For the soul does not so necessarily sympathize with the body, as that she cannot forbear these indulgences. No passion can compel the will, without our own consent. The immediate obsequiousness of the body to the will shows, rather, that the motions of the mind are no way mechanical, but a more noble, distinct, and incorporeal principle. The power of the understanding over the will, is to regulate only; nor can the will, refractory and mutinous as it often is, or our passions, rebellious as they are, knowingly and sedately wish for what is destructive of their good; unless our present impatience of being satisfied for the time deprave our natures, and men obstinately stop their ears, connive and shut their eyes, and will not seriously consider, nor act like understanding and reasonable creatures, to examine and discuss things impartially, curb
and moderate, yea, crucify their inclinations. For the human Soul acts as the will disposes, and that, as the understanding prompts.

Wherefore, our care must be to rectify the intellectual faculty, and that it resign not to appetite; that perverse will become not vicious, and the vice, custom, and that induce necessity: that, as the wise man advises,¹ we give the water no passage, that evil enter not the first door of sense, eye, or ear, touch, or taste; nor the second one, of fancy; nor the third, of understanding; nor the fourth, of the will; lest it break forth into act, and one act produce two, and that a third, and it become habitual, and double to infinite; and, in fine, obliterate the very principles of nature, and debase us below the vilest animal. We may be angry, provided we sin not, nor let more of the passion loose than what is just, and adequate to the offence: but it should never be such as to proceed to rage, and irreconcileable reproaches, or let the sun go down upon our wrath: that, as we are advised, our fears betray not the succour which reason offers, or by rendering us too remiss, when upon a good and brave occasion it imports us to bear up. And so of the rest of the irascible and concupiscibles, reason and religion should hold the reins. Remember this, and show ourselves men;² that is, do manly things, and not to let our passions loose, like untamed beasts; not be lions in our own houses, furious, morose, peevish, snarling and worrying

¹ Ecclus., xxv., 25. ² Isaiah, xlvi., 8.
upon any slight occasion; nor be thorns and briars to all that come near us, and thwart our inclinations.

The mind, says our noble Verulam, has that empire over the body which the Lord has over his vassals; but our reason over our passions, that command which a magistrate has over citizens, which should be gentle, benign, easy, and discreet. St. Augustine, I remember, strangely wonders at the folly of men, so desirous of knowing other things, before they learn to know themselves. What pride, what passion, what envy and malice, lust and avarice, in a word, what dens of wild and unclean beasts should we discover in our own bosoms! Verily, passions always are and ever will be in us, and so they should; but it is not convenient they shall always be in action, though always in a readiness: like well-disciplined soldiers, they should always stand in their ranks and files, and know how to handle their arms, but be content with their pay, and do violence to no man, till led on by an experienced commander, and when the cause is just; and then they are for defence, and to guard, not to injure ourselves or others. They are subjects, not sovereigns, and must be kept in obedience, lest they dethrone their superior; and when they rise in tumult, they are to be suppressed and reduced to order again.

Thus regulated and employed on worldly objects, there is not a passion but is highly useful. When, for instance, our love is placed on virtue, and the sovereign Good, which is God, our hatred and aversion against base

1 Bacon's Instaur. Magna, l. 5.  2 Confess., lib. 10.
and unworthy things, our grief and regret for our own defects and follies, and so of the rest. For a wise man should not be without his passions, but above them. Our great Example was so; and those who will be happy must be so, when they feel them stirring, hold in the bit, and never suffer the beast to ride away with the man, but keep a steady hand, regulated and free from excess; for so did our Lord and Master; and therefore have divines called them \textit{propassions}. He bounded them with reason, and suffered them hardly to go a little forward, when He scourged the sacrilegious profaners of the Temple.\textsuperscript{1} For passions, which with the Pathomyotomists are, as it were, the muscles of the soul, are like the winds; they serve to swell and fill the sails, and urge and move us forwards. Nothing more useful, while they gently breathe, nothing more benign: but, when once they estuate, grow high and impetuous, they raise the billows into mountains, toss and submerge the vessel. An angry man shall never want woe; like fire and water, they are excellent servants, but cruel masters. Nothing is more profitable, whilst kept within the chimney and the channel; but, when once they grow too big for the one, or bear down the banks of the other, and get dominion, they take hold of the house, and overflow the country, and a dreadful conflagration and ruin follows.

Nor are we, for all this, to complain of nature, as if dealing hardly and unkindly with us, in rendering us susceptible of these impressions, and obnoxious to the

\textsuperscript{1} S. John, ii., 13.
rage of such unruly monsters, the dangers and errors to which we are exposed: since, as we showed, all our corporeal motions are sensated by the soul, and she can give check or liberty, control and curb them at pleasure; which is to me a kind of demonstration of her independence from the body, and a manifest conviction that God has inspired it, and furnished us with such aids against their rude and sudden incursions, as needs nothing save our own endeavours and resolutions, co-operating with a grace which is always ready to assist us; but without which all the *right reason* the Socinians and others glory in will hardly entitle us to what we have lost, or take out the spot which has tainted us: so impetuously are we hurried to our own destruction, and to coveting the forbidden fruit.

Besides, He has placed her in this station, that man being a voluntary and intellectual agent and arbiter of his actions, when we shall have given proof and argument of virtue, He may remunerate with the more noble reward: and pronouncing us capable of higher felicity, communicate to us Himself, which is the sum of happiness. For upon this account the great Apostle\(^1\) describes to us what pleasure he took in infirmities, in necessities, and distresses, and that when he was weak, then he was strong, as having in a readiness to revenge all disobedience, &c. It is for this we are bid to love our enemies, to bless them who curse us, pray for those who persecute us; to turn the other cheek, go the

---

\(^{1}\) II. Cor., xii., 6, 10.
other furlong: in a word, not to render evil for evil, but to overcome evil with good.

What an important and highly necessary thing, then, it is, that man should know himself, and the dignity of that heaven-born inmate, his immortal soul! When the wise man said, "Know thyself," (says Cicero) he bid thee know thy soul. And the Poet—

*Nec te quaesiveris extra.*

Seek not thyself without thyself. It is like travelling other countries and foreign kingdoms, before we have seen any thing of our own.

Man is the whole world’s compendium: and though his body be elementary, kneaded of a handful of refined dust, his soul is ethereal, incorruptible, and immortal. He is nature’s great miracle, the divine epitome of the creation, and the richest furniture of both worlds, this and that to come: fitted and prepared for the highest favours, to converse with angels, and, being purified by virtue, to be taken into the bosom of his Maker,2 freed from error, ignorance, impetuous loves, human passions, and infirmities, and that all his delights are chaste, rational, godlike, endless.

What, oh, what shall I call thee, O, illustrious particle, but a ray of the Divine Light itself!

—*divinae particular aurae,*3

1 Cum igitur dicit, nosce te, hoc dicit, nosce animum tuum.—Cic. Tusc., 1.

2 Οὐτοὶ μὲν ἔχουσα, εἰς τὸ ὅμοιον αὐτῆς τὸ θεῖον ἀπέρχεται, τὸ θεῖον τε καὶ ἀθάνατον, καὶ φρονίμον.—Plato’s *Phædo.*

3 Hor., Sat., lib. ii., 79.
(not to say a decision from the godlike substance, as Philo platonizes a little too boldly) all but a spark of His incommunicable essence. For so the orator, and, with becoming veneration, *Humanus animus, decerptus ex mente divinâ cum alio nullo, nisi cum ipso Deo (si fas est dictu) comparari potest.*

Not by any substantial or real emanation, which were indeed bold to assert; but, as she is immortal, spiritual, and intellectual—perfections in God transcendent, in man by way of signature and idea only; or, as the Apostle himself, as well as the poet of near alliance with him—

\[
\text{Tov γὰρ καὶ γένος ἐσμὲν.}
\]

"For we are his offspring."

And hadst thou been, my soul, of meaner extraction, how couldst thou have been the object of such a Saviour, and such a love? As, rather than He would not make thee happy, when He saw thee so miserable, betrayed and captivated by thy senses, would Himself descend, become incarnate, palpable, and obvious to our sense. And this body and this nature (of a reasonable soul and human flesh subsisting) has He exalted, that, being lifted up, He might draw all men to Him.

But, alas! when all is done, in such a dungeon does this precious jewel of ours lie, that she neither discerns nor is sensible of her own operations; no, nor how the body itself, her domicile here, is built. She knows not

\[1 \text{ "The human soul, as it is an emanation from the Divine mind, can be compared with nothing else (I speak reverently) but with God Himself."—Cic., Tusc., lib. v.}
\]

\[2 \text{ Acts, xvii., 28; Aratus.} \]
what gave the first motion to the first moved, the heart; and whether now we move by the spirits in the intercurrent nerves, the heart, or blood, or by what other family. In short, "that a soul we have we know, but what, where, whence she is, we cannot tell." And though we only live by breath, we neither know how nor why we breathe: so as after two of the most sagacious persons of our age (or perhaps of any other) have spent volumes on the subject, treating of the use of respiration only, they have ingenuously acknowledged it a hopeless search!

Prô superi, quantum mortalia pectora cæcæ
Noctis habent......

We know not the very principles by which we live, nor where we dwell, nor what we do, nor are. But, when we shall be freed from these impediments, it is then we shall be happy, indeed; it is then the soul shall

1 Animum habere nos scimus; quid sit animus, ubi sit, qualis sit, et unde, nescimus.—Sen., Ep., 121.
2 [He names only one; the other, probably, is his friend, the celebrated Boyle, in one of whose works (Physico-Mechan., E. x.) there is an article upon the use and process of Respiration, which concludes with the following quotation from St. Augustine—“Magis eligo cautam ignorantiam confiteri, quàm falsam scientiam profiteri.]
3 Advocent in consilium omnes ingenii viros, quotquot sese naturæ consultos arbitrantur, sudabunt scio plus satis, priusquâm verum respirationis usum invenerint.—Dr. Ent. Antid., De usu. Resp., p. 143.
4 "Ye Gods! What thick, involving darkness blinds The stupid faculties of mortal minds!"—Picart.
Ovid, Met., lib. iv., 472.
5 Cic. Tusc., lib. 1.
know and be known; and whether the seeds of all sciences, knowledge, and reason, were inherent in pre-existency, which are now excited and stirred up to act, by the suggestion, ministry, and retrievemont of the senses; and whether we now recal things only to memory, which we knew before: it being more than probable, that the soul in separation, and departing hence, carries away all her innate and acquired notions, and it is certain, receives also higher and more sublime ones.

REFLECTIONS.

We shall then contemplate the universe in its archetype; namely, the intellectual world, in the Divine mind; in which dwell all the forms and exemplars of all that has been, is, or shall be, in the angelical, elementary, great, and little world; the substance, quiddity, and essence of everything; the prime and proximate matter of all the species and kinds of beings, together with the form and principle of motion in everything. Nay, (and in comparison of which, all this knowledge is yet but ignorance) even to the full of our most enlarged desires, the Divine decrees themselves, immortality and infinity; the unexplicable, adorable Trinity, and hypostatical union,¹ and other recondite mysteries of our most holy religion. There it is (to speak with a devout person,)² the records of eternity shall be exposed to view; when we shall discover upon what apt junctures and admirable dependences of things so perplexed, cross, and mysterious to our shallow reasonings, the designs of

¹ See Pet. du Moulin. De Cognit. Dei. ² Mr. Howe.
them were laid: when in that mirror, that Speculum Aeternitatis, we shall see all that truth, the knowledge whereof can be any ways grateful to our nature; and in his light see light; and by that light all those vast treasures of knowledge and wisdom shall lie open, without enclosure, and the most voluptuous epicurism, in reference to it, become innocent. Where there shall be neither lust, nor forbidden fruit; no prohibition of desirable knowledge, no affectation of undesirable. When we shall trace all those rivulets which successively pass by us here in petty streams, to the wide ocean, and the glimmering beams of light to the fountain of light itself. In sum, when the pleasure of speculation shall be without the toil, and that maxim eternally antiquated, that "Increase of knowledge increases sorrow."

Oh, how charming a scene will it be to behold whence the vast frame of all nature sprung! what stretched out the interminable expanse, planted the pillars of the poised earth, and turned the mighty wheels of Providence through all succession of time! What that arm, which holds the spirits of darkness in adamantin chains, and checks the rage of tyrannous princes, and the tumults of restless and ungovernable multitudes, that the few virtuous and dear to Heaven be not made a prey! How delightful will be the contemplation of comprehending all the possible effects of the Supreme Power, as far as a glorified creature can dive, or desire to dive into infinity! To have a prospect of the innumerable creatures in the creative power of the Almighty! Nor less to consider what has re-
strained its full exertion, and that uncontrolled justice, that it did not at once avenge itself on the contumacious, and turn the whole world of sinners into ruin and desolation.

What a happy state, when all our doubts shall be solved, all our infirmities healed, all our senses unbound, all our faculties inspirited with new vigour! A scene of love and fruitions opened all about us, and letting us into the heart, where the noble thoughts of that love dwelt from eternity, which made the great and consummately happy God become a man of sorrows, and the Deity to be clad in human flesh! Eternity to become the birth of time, and the Son of the Most High to pitch his tabernacle among mortal men! In a word, (O, stupendous!) to teach, reduce, and restore sinful creatures, and conduct them to supernal happiness; redeem lost and miserable dust with the blood of God! And that God to embrace a painful and shameful cross; become a victim to incensed justice—a spectacle to angels and men!

Nor all this by transient and superficial knowledge, figures, and umbrations, but immediate and intuitive notices; nor longer by mediation of species, nor confusedly in universals; but distinctly, properly, and by their essential definitions. Our knowledge will then, I say, be perfect, without need of art and reasoning; as being itself a perpetual ratiocination, such as that of God and holy angels; penetrating at once the universal nature of things, and beholding in their causes things which cannot be known but by exercise and habits, experience, comparing, time, succession, and by degrees;
and, after all this labour, but imperfectly; which are all defects separated souls are exempt of.

In the life to come, when the capacity of every sense and faculty shall be improved to the utmost, and no object to interpose or present itself, but such as is capable to afford an entire and distinct satisfaction and complacency. It is then that, cleared of all suffusion, we shall contemplate that fulness, which can only satiate without satiety. Finally, it is there (and verily, for which I more ardently thirst after it) that we shall be restored to the enjoyment of our departed friends, holy and excellent persons, whom as our lives we have loved. The contemplation of this made the orator, in the person of Cato, profess that, old as he was, he would not accept of longer life, and become young again, in assurance of shortly seeing and enjoying the delights of another world.¹

If thus a Heathen was so transported with hopes of seeing again those heroes and worthy men, famous for their noble actions and moral virtues, and of which they had yet but conjectures only; how should we Christians languish after the fruition of that blessed state, the vision of God himself, the glorified body of our lovely Jesus, the city of the living God, the celestial Jerusalem; the innumerable host of angels, spirits of

¹ Oh! præclarum diem, cum ad illud divinum animorum concilium cætumque proficiscar, et cum ex hac turbæ et colluvione discedam. (Cic. De Sen.)—"O, glorious day, when I shall set out to join that goodly council and assemblage of spirits, and quit for ever this grovelling scene of turmoil and defilement!"
just men made perfect;¹ all our excellent friends, dear
children, relations, and acquaintances; all those great
and admirable persons, of whom the world was not
worthy, and we have heard such glorious things, joining
with Moses in his Song, with David in his Psalms, with
all the saints and celestial hierarchy, in perpetual jubil-
ation and hallelujahs! O! happy day, when, divested
into spirit, and set on shore in that invisible continent,
we shall repose in the sedate and tranquil ether; see
through the curtains of matter new and surprising
scenes and ideas, beyond the limits of finite beings.

Why, then, do we any longer perplex and betoil our-
selves in macerating studies, and labour in the fire
about any thing but this one thing needful to put us into
this happy state, and conduct us into the peaceful har-
bour! Methinks, with Cleombrotus, (reading Plato's
Phædo) we should almost be impatient of life; or,
rather, with the apostle, (who had been rapt into the
third heaven, saw and heard what he could not describe
and utter) desire to be dissolved,² which were best of all;
and, in the mean time, be daily advancing in virtue,
till we are in some degree refined from the dross and
sulliage ³ of our former lives' incursions, and gotten as
near the top of Olympus as we can do in the circum-
stances of this mortal condition.

Who would not with a glorious ambition aspire to
this perfection, and strive to qualify himself for this
apotheosis, this advantageous exchange, where, enlarged

¹ Heb. xii., 22, 23.
² Phil., i., 23.
³ Cic. Tusc.
from her narrow confinement, our souls shall no longer remain obnoxious to her treacherous flesh and rebellious passions, nor ratiocinate and grow knowing by little parcels and pittances, tedious elucubrations, the auxiliaries of erroneous senses and material images: but, (as Seneca\(^1\) introduces the father of Marcia, showing her deceased son, Metellus, the singularities of the other world) the soul shall emerge as out of sleep, and break forth of this dismal cloud; intuitively, nakedly, purely, in one instant, be put into full possession of all that the Soul can desire;\(^2\) and know, and comprehend herself entirely; which, whilst from her we derive all we know, or comprehend of all things else, is the only thing that she herself nor knows nor comprehends.

O, wonder of wonders, that the soul should be light, and nothing more common, more perspicuous than light; yet nothing more obscure, more dark! And that \textit{that} which shows us all things else, should conceal herself! That which is within, without, and all about us, should be invisible;\(^3\) so as we see not what we see! Who that has a spark of generous emulation, I say, would endure that the most evident of things, and the most important, too, should continue thus dark and concealed? That \textit{that} by which we see, move, discourse, and perform all our actions—nay, by which we are and exist—we should

\(^1\) Consolat. ad Marciam, c. xxv. \(^2\) Tertull. de Anim., c. 53. \(^3\) "\textit{Animus autem solus, nce quum adest, nce quum discedit, apparet.}—\textit{Cic. de Senect.}"
be stark blind to, and ignorant of? But so it has pleased our Maker, to mortify our pride and vanity, whilst grovelling here below, and immersed in sensual pleasures, we tread not the paths of those virtues and dispositions which lead us to it, and neglect to know ourselves. Ah! my soul, how fain would I be once acquainted with thee, with whom I thus continually converse, yet neither see, nor know, nor hear; whilst yet I feel, and hear, and see thee by effects! That I might know but what thou art, by whom I am, for whom I live, and where thou dwellest, who art so near, and yet so far from me!

Shortly, shortly the curtain will be drawn, the mist be dissipated, and day appear; Then shall the glorious scene be opened, the Bride descend,² when I shall see³ and know Thee fully, and enjoy thee for ever, and Him who made thee, and gave thee to me! Methinks I behold (as the eloquent Father⁴ describes it) how the soul, finding herself unfettered and at large, she trims and spreads her plumes for the celestial flight, and wondering at her escape, as awakened out of a dismal dream, and delivered rather from a hideous tempest, she finds herself on the banks of Elysium, feels a new spring of life within her, an unconfined light about her, new comprehensions and capacities; and for a while admiring from whence she came, what she is, ravished at her own felicity, and overcome with joy, dissolves

into the praises of her Liberator! Would not seriously the imagination almost transport one?

O, Thou, most high, prime, and super-excellent nature, who art All things, and in All; by whom all things live, move, and have their existence; whose instruments all agents are—wherever Thou art, who everywhere art, Thou art all things, and canst do all things. If Thou art anything at all, and not rather the Cause and Being of all, if at all Thou be a Cause. Whatever Thou art, Thou art Infallible; and we know not what name to give Thee but Perfection and Goodness. And Thou who art good, art all good, and all things are good in Thee. Thou art Thine own wisdom, Thine own power, Thine own consummate happiness! Thou, O Thou, who art all this, teach us to comprehend Thee beyond those speculations, and intellectual gazings on Thine astonishing perfections, by such influxes, as filling us with divine and supernal qualities, may exalt our faculties beyond their natural power, and bring them into an assimilation and conformity to the most accomplished idea of Thy goodness, together with an inward sensation of their effects. O, Thou, who canst do all this, and more than we can comprehend, ask, or think, enter into us, illustrate our understanding, instruct our ignorance, and teach us to know Thee, and by Thee, ourselves.

For it is not enough for a brave and heroic mind to live so as to merit no reproof of others, or of ourselves; but that we strive to add more lustre, brightness, and
perfection to the soul; that we purify, and render it fit for its reception into the superior mansions and friendship of heaven, by acts, I say, of virtue, and extraordinary gallantry. I tell you, (says Seneca) betwixt God and good men, there is a friendship—friendship, do I call it? yea, an intimate acquaintance.¹

In this interim, then, we should sometimes withdraw and ananchorize ourselves² to enjoy those pure and abstracted delights.³ There is no climbing up to the knowledge of God, or of ourselves, but by contemplation of what most resembles Him, and is nearest to Him—our immortal souls, purified by a holy life, which is the God within us. We should take off our affections from union and adhesion to false appearances, cement and fasten them to solid and worthy things, from whence our appetites and violent passions may have broken them off. Verily, the recess is highly necessary, and that we now and then, I say, suspend our cogitations from sensual and material objects,⁴ check and recall our thoughts, and, directed by the light within, introvert our contemplations, act with freedom: and we may ask her counsel and assistance, and hear her speak, without disturbance and impertinent avocations.

¹ Inter bonos viros ac Deum amicitia est; amicitiam dico? imò etiam necessitudo.—De pruden., cap. 21.
² Magni est autem ingenii revocare mentem à sensibus.—Cic. Tusc., l. 1.
³ Apices animæ.
⁴ See this excellently described by Plotinus, l. 6, c. 5.
This, this alone is the only way to know our souls, and ourselves, and how we differ from other creatures. By this we shall be able to discover that the body is scarce an essential part of man, and that the material and perishing substance can never comprehend what is immaterial and perdurable. She will sweetly charm all the perturbations that surround us here, transport and carry us beyond the sphere of sense, and entertain us, not with these Socratic discourses, but with new Illapses and discoveries of indeed another world, nearer hand, yet richer than Peru and both the Indies. And, though she be still encompassed with this dusky cloud, so as we yet see but through a glass darkly, we may perceive some glimmerings of light, how bright and charming she is within, and what a paradisian day is purpling the hills, which even through this tinsel veil of flesh shall shortly be removed, and the horizon cleared—when the sensible powers shall be refined and spiritualized, and the soul be on the wing to the mansions of repose and bliss. It is a noble contemplation, and sign of a great and heroic mind to be breathing after the separate state. Lord, to behold Thee in glory, is to be transformed into it; to contemplate Thy divine excellency, is to become Thy illustrious image; to know Thee by distinct perception, and Thy works by irradiation of Thy brightness, will then be imparted to us, when we shall at once become wise, holy, vastly knowing,

1 See St. Augustine's description of The City of God, 1. 22, c. 30. Erit ergò illius civitatis, &c.
self-satisfied, and perfect beyond the perfection of creatures in their highest excellency! In union with Thee we shall have nothing to wish, nothing to seek, or further to desire! Our services of Thee will be still new pleasure, and such tides of fresh additions to our satisfactions and intellectual joys, as at once will actuate us with a vigour able to converse with Deity itself, and enlarge our capacities to comprehend Him, who is Incomprehensible.

Let us hear the excellent stoic: "Through the interval of infancy and age, as from another womb, we hasten and speed away to another Birth and Original. Another state of things expects us." And, a little after, "Shortly, very shortly Thou shalt behold all the mysteries of nature, this darkness shall be discussed, and Thou encircled with a glorious lustre," &c.

These are real things, and great, to which the most sagacious and intelligent brutes pretend not. Their impressions come altogether from without, are fluid and transient, and therefore quickly vanish: nor can they recollect or think abstractedly, and of this future state of retribution, intellectual life and glory; on which is founded all that can render our condition considerably different from, or better than that of beasts; environed, as we are, with such restless passions, unsatisfiable appetites, the accidents and anxieties of an umbratile life:

1 Per hoc spatium quod ab infantia patet in senectutem, in alium maturescimus partum. Alia origo nos expectat, alius rerum status, &c.
2 Aliquando naturae tibi arcana retegentur; discutietur ista caligo, et lux undique clara percutiet.—Sen., Ep., 102.
so as, if in this alone we have all our hopes, we are
indeed of all creatures the most miserable.

“For to what purpose was I born at all, and should
rejoice to have been among the number of the living?
What! to be a passage for our meat and drink?—to
eram this frail and fluid carcase, which must shortly
perish (unless it every foot be gorged), and live a slave
to sickness, and the dread of death, to which we are all
obnoxious? Take once from life but this inestimable
good, and it is not worth the sweat and labour we
bestow upon it. Oh! how contemptible a thing is man,
unless he raise himself above humanity!” So Seneca.

“If thy soul, whatever she is, perish and dissolve with
the body, I cannot see in what they are to be esteemed
blessed, who, having never attained any reward of their
virtue, haply, have even perished for virtue’s sake.”

In sad earnest, if we have no farther prospect than
this miserable being here, whatever circumstances of
health, youth, riches, fame, beauty, and the inferior
pleasures of brutish sense, may seem to alleviate the
hastening and fatal period; or that there be no life and

1 I. Cor., xv. 19.

2 Quid enim erat cur in numero viventium me positum esse
gauderem? An ut cibos et potum percolarem? ut hoc corpus
casurum ac fluidum periturumque, nisi subinde impleatur, sar-
cirem, et viverem aegri minister? ut mortem timerem, cui omnes
nascimur? Detrahe hoc inestimable bonum; non est vita tanti,
ut sudem, ut aestuem. Oh! quàm contempta res est homo, nisi

3 ’Ει μεν ἀμα τοῖς σώμασι διαλυμένοις, καὶ τὸ τῆς ψυχῆς, ὁτιδήποτε
retributions hereafter, nor no soul worth looking after, but that which is common to other creatures;—I must confess (with Dr. More) it seems almost indifferent whether any creature be, or no. Nor should I (with dying Plato) thank my Genius for being a man, for my country, birth, education, fortune, or that I was born when so many wise men flourished. For, what is it to have lived seventy years, wherein we have been dead, or worse than dead, above two-third parts of them? Sleep, youth, age, and diseases, with a number of poor and contemptible employments, swallow up at least so great a portion, that as good, if not better is he, that never was, than he that is, that hath but such a grace or glimpse of passing life to mock him.

There can, therefore, be in God no design in making of this world, which will prove worthy of so excellent a goodness and wisdom, but the trial and probation of man's immortal soul, which seems the deepest reach of His counsel in the Creation; and the life of this world but a prelude to one of longer duration, and larger circumference hereafter. And surely, as we have showed, it is nothing else but the heavy load of this body that weighs down the mind from reaching to those supernal hopes, that we may not say from a certain sense and perception of that undisturbed state of Immortality.

But if a man's soul be once sunk by evil fate or dereliction from a sense of this high and eternal truth into that cold conceit, that the Original of All things does lie either in shuffling chance, or in the stark roots of

unknowing nature and brute necessity; and that there is nothing of extraordinary and divine, which discriminates men from other creatures, besides their mechanism; all the subtile chords of Reason, without the timely recovery of that Divine touch within the hidden spirit of man, will never be able to reduce and pull him back out of that dreadful pit of Atheism and Infidelity. So much better is innocence and piety, than subtle argument, and earnest and sincere devotion, than curious disputes.

Da Pater augustam menti conscendere sedem,
Da fontem lustrare boni, da luce repertâ
In Te conspicuos animi desfigere visus:
Discente terrene nebulas et pondera molis,
Atque tuo splendore mica: Tu namque Serenum;
Tu requies tranquilla piis: Te cernere Finis,
Principium, Victor, Dux, Semita, Terminus idem.¹

Grant, then, Great God, our thoughts may reach thy throne,
Grant we the Fountain of all good may see;
Grant that this blissful Light to us once known,
We may for ever fix our eyes on Thee:
Dispel this darkness, and these clogs remove,
And let Thy beams appear. For Thou art light;
Thou art true rest, to those who do Thee love,
Beginning, End, both Way and Guide; the sight
Of Thee is all Thy creatures can desire,
'Tis this alone to which our souls aspire.

¹ Böeth., lib. iii., Met. 9.
CHAPTER IV.

SECTION I.

That if there be a god and sovereign being, who created all things, he is to be adored and obeyed by his creatures (especially by man the intellectual) with religious worship; not only as his duty, but in order to his future state and felicity.

That we have in the former chapters hitherto extended our discourse so prolixly, none ought to wonder who shall duly consider the great importance of the subjects, The Existence of God, and His Works; especially as it more nearly concerns us, the immortal souls of man, for whose use and contemplation they were created in reference to his Maker's glory and His creatures' well-being. Since, that foundation steadily laid, the superstructure and consequences must undoubtedly stand, and remain unshaken; namely, that, since we can have no rational notion of The Deity, without supposing Him to be of absolute perfection; that He is benign, loving, bountiful, just, powerful, wise, holy, and transcendently all this, He is and ought to be adored, and absolutely obeyed by all His creatures, especially by man, whom He has more eminently endowed with reason and conscience of his duty, and
capacitated to understand the benefits and happiness which will accrue to him by it. For all perfections, such as are in Almighty God, must needs challenge the highest reverence and veneration.

It is certainly the greatest argument in the world that those who receive being from another should sincerely honour, serve, and obey that Being. Divine adorations and recognition must, of necessity, and from parity of reason, and nature of the thing, follow such high obligations. And therefore it is not enough to speak only of, and to know, His Godlike perfections, and be sensible of His goodness, and other attributes; but to consider what our duty is, and to express it in acts of obedience, worship, and gratitude for them. This is so natural and just, as even the very Heathen universally give their suffrages for it. Socrates, Plato, Cato, Cicero, Seneca, all the philosophers, are Christians in this point without dispute.

Si Deus est animus, est pura mente colendus,\(^1\) even for the dignity of His nature, much more in regard of our relation to Him as His creatures. Let us hear how they speak the very sense, yea, the very words of the Scripture. If God be a Father, we must obey Him; if our Master, serve Him. Plato calls this in plain terms Religion towards God.\(^2\) And so the Holy Prophet, If I be a Father, where is mine honour, &c.

1 “If God is a Spirit, we must worship Him with a pure mind.”

2 Let any man read his *Epinomis*, Alexander Aphrodiseus to the same sense, and also Jamblicus, and generally all the Academics with their Master.
It were to swell a volume but to cite part even of their sentences upon this topic. Histories of all nations, civil or barbarous, agreeing in this matter, who, for the worship of their gods, have built, endowed, and consecrated places, times, persons, altars, temples, and sacred rites, as not only books, but the yet remaining ruins of their many temples, and statues, inscriptions, and places of worship, proclaim; where they sometimes invoked their deities, sacrificed, prayed, performed their vows, deprecated punishments, returned thanks for benefits received, inquired after the will of their gods, and the responses of their oracles. For, if we believe that God is a rewarder of those who serve and obey Him (as we have proved He is, from the nature and effects of His attributes), the very love of ourselves would prompt us to implore the continuance of His favours and kindness to us, even in this life! And being convinced that it is in His power, not only to bless us here, but make us happy hereafter, would render us more devout, and solicitous to serve and please Him, and to give Him the worship of reasonable and intellectual creatures.

Fruition and the Supreme Good is doubtless the end of every wise and considering person. And our true felicity consisting in the favour of God, who is the bountiful Giver of all good, what should we not do to obtain the bliss and felicity He is able to bestow upon

1 Quis non timeat omnia providentem et cogitantem, et animadvertentem, et omnia ad se pertinere putantem, curiosum et plenum negotii Deum?
His worshippers? And this not only for reward merely, or to avoid His displeasure, but in contemplation of His Divine perfections, wherein is contained all that is lovely and desirable, namely, the whole Creation itself; all Events and Providences; in a word, all that can perfect and consummate our natures, and make us accepted. The worship and contemplation of God will certainly be the most ravishing and delightful part of our future and everlasting blessedness.

Antoninus has said many excellent things upon this head, which may be brought for the conviction and reproof of all negligent and indifferent people. Join to him Epictetus and others, where they show the love, veneration, resignation, passive and active obedience, which such excellencies, as are in the Deity, must needs produce; and what returns of service, love, and affection in us, the worshippers of Him; striving to come as near as we can to the Exemplar, in all those virtues which any way contribute to His service; and by endeavouring to understand His will, with all devotion, sincerity, and exactness, because of His all-seeing nature, and indefectible justice, to punish and reward.

The Gentile World, who but groped after this, thought it so reasonable, that they esteemed nothing precious enough, no pains, no charge, nothing busy enough (though even to success and superstition) to demonstrate their devotion, and the sense of this duty. For this end did they offer so many expensive and bloody victims, gums, and incense; and some even themselves, and dearest relations; not only to propitiate
for them, but to testify their gratitude: as we may read of Jephtha, or Iphigenia of the heathen, the King of Moab, the rites of Saturn, and innumerable other instances. To these oblations they added prayers and Eucaphristical hymns, and what other expressions of thankful hearts they could devise. Nor owe we less to that Being, in whom we live and move. God being the God of All, all are obliged to serve and adore Him. We owe ourselves to Him, who lends us ourselves to ourselves, and those faculties which He requires the service of, namely, our reason, nay, our very lives.

These are not institutions and arts of policy, but Nature’s dictates, and therefore delivered and confirmed by the impressions of reverence, which all men feel and perceive within them, and with satisfaction, when they perform their duties; uneasinesses, and secret regret, when they neglect them. In short, all the world is so convinced, in this universal practice, that God is to be the object of our worship; that, as we have shown, it has been always proner to excess and superstition, idolatry and unlawful worship, than to atheism, or neglect of it. And if any there be who seem to worship none, they are no more to be reckoned among the number of human creatures, but of ill-shapen monsters, and lumps of deformity, who neither know how to reason, or reflect on what they should, and draw consequences like men of reason; or, lastly, make no use of their reason, which is worse.

Epictetus, whom we named, is so convinced of this, that he prescribes set offices, as it were; and tells us
that prayers and praises, psalms and hymns, become all our actions. For such we find especially among the poets, though to their false deities, whose favour and assistance they invoked at the entrance of most of their works and undertakings. Jamblicus calls the oblations of a sincere and pure mind the most acceptable worship; and so does Hierocles.¹ And though all this was, we acknowledge, directed to false gods, yet it denotes the reasonableness of it, and how universal and natural. And hence we read, or hear, of no people or nation, even to the last and utmost discoveries of the habitable world, but what pay some regard and worship to a superior being, whom they either love and invoke for good things, or deprecate for evil. God Almighty seeming rather to connive at their superstition than suffer them to neglect a duty so reasonable and so natural. They worshipped, though they knew not what; nor do we find them so much reproved for the duty as for their ignorance and blindness in not directing it to the right object, and in a right manner. Wherefore, "if God," says Plato, "be to be worshipped and served, let us make our addresses to God, and inquire how He will be served." How much more, then, are Christians obliged to this duty, and to that of gratitude, whom God has prevented with the knowledge and understanding of His will in this particular!

¹ See Proclus's excellent Treatise, the devout ejaculations of Simplicius, the behaviour of dying Socrates, recommending his expiring soul, with other virtuous and illustrious heathen.
Here, then, we conclude this chapter; the consequences of the titles being so perspicuous, that, if there be such a God and Sovereign Being as we have described, who has created, sustained, and provides for all; and that, in order to a future, more happy or unhappy state, He is to be revered by all, with all humble, religious, and sincere worship. And what that is will be our next inquiry.
CHAPTER V.

SECTION I. RELIGION.
SECTION II. RELIGIOUS WORSHIP.
SECTION III. NATURAL RELIGION.
SECTION IV. CONSCIENCE.
SECTION V. THEISTS.
SECTION VI. ATHIESTS.

SECTION I. RELIGION.

Religion, as being the highest reason, is that alone which makes mankind to differ from brute animals; because it renders him like his great Creator, rectifying the depravity of his nature, which, if uncultivated by religion, becomes fierce and sensual. But religion and the sense of a deity, or some transcendently excellent being, purifies the soul, and refines our nature by virtue of its precepts; there being no creature besides that can actually and intentionally address its powers and faculties to God. Wherefore, to be religious is more truly the formal distinction between men and beasts, than all that the philosophers have furnished to its definition;¹ and, therefore, more adequate to his character than either polity, society, risibility, without

¹ Animal Religionis capax.
which he were no reasonable creature, but a mere brute, the very worst of the kind. There is, indeed, among brute animals, some imperfect traces of all the perfections and qualities of man, excepting that of religion. But, with all this, they apprehend neither God, angel, or intelligence. And, therefore, Gesner, I remember, concludes that pigmies (those diminutive people, or sort of apes or satyrs, so much resembling the little men storied under that name), are, therefore, not of human race, because they have no religion.

It is true that all entities and beings whatsoever love that which is good, and does them good. And, as David says, there is none good but God; and, therefore, those who love good do, consequently, love God, metaphysically speaking; and the love of God being the sum of all religion, all who love that which is good are religious. But, if this love of good flows not from an intellectual principle, it is not properly religion, which is among all nations and people competent only to mankind;¹ that is, such an impression as enables him to offer the Deity a rational and spiritual worship.

"We know," says that excellent person,² "much of the courage and boldness of lions, horses, and other animals; but we hear nothing of their justice, equity, and beneficence, and the rest of the moral virtues. And why? They are void of reason;" and, therefore, pretend not to that sublime and radiant beam of an intel-

¹ Ex tot generibus nullum esse animal præter hominem, quod habeat notitiam aliquam Dei.—Cic. de Leg. i.
² Cicero de Offic., lib. i.
lectual agent to qualify them for contemplation and notions abstracted, from matter, and to reflect and proceed analytically from effects to causes, and, therefore, are incapable of science (the product of ratiocination), and of the consequences resulting from the premises by inference of the conclusion, induction from universals to particulars, genus, species, and other dialectical notions and methods.

The prayers and ejaculations which parrots have been taught to utter, nay, to recite whole psalms, creeds, and litanies (as did that of Cardinal Ascanio,¹ and others were used to do) is all but impertinent prate, without relation to time or place; and what they say, fantastical and wholly inconsistent, such as they learn by rote, by drops and little fragments,² working on their airy fancies; nor springs it from any perennial fountain of their own, and, therefore, stops and soon becomes dry. The like may be affirmed of those other creatures, who have been made to curse and bless (as they term it) themselves; to kneel, and use other reverent gesticulations (of which, above all other, popish legends abound). They are not to be reckoned for acts of religion, but the effects of pure art, and of their masters and instructors. They do not proceed from any interior principle, as they do in man. But I needed not, perhaps, so long to have insisted on this.

¹ Rhodog., l. 3, c. 32.
² Neque quid dicunt scientes, neque ea quæ dicunt, temporibus locisve accommodatè dicentes; sed linguam duntaxat ad præstitutum numerum agitantes.—Apollon., l. i.
Wherefore, we return to show what religion is: namely, the most immediate tie between God and His creature, obliging to a certain law and rule, for the government of his life and actions. Wherefore, Plutarch calls it the very cement of society, the foundation of all legislation; and that a city had better be without houses, inhabitants, and walls, as without religion; it being generally observed, that those countries and commonwealths have been most flourishing and happy which have been the most religious; as was the Roman empire whilst religiously observing their simple rites of piety, the duties of justice, fidelity, and other moral virtues; whereas, the ruin and decadence of kingdoms and dominions followed, as they degenerated by atheism, profaneness, sensuality, injustice, and other vices. The same is remarkable of particular persons and families. "Take away religion," says Tully, "and truth, fidelity, justice, and all commerce between man and mankind will come to nothing." And, therefore, religion and the service of God is the main and important business of our life. For so the wise king, after he had made experiments and considered all things, concludes that this is the whole duty of man. Religion is the intercourse between heaven and earth, God and man, by which he is pleased to manifest Himself more especially to us, both for His glory and our good; as we find by the

1 Under the heathen emperors, for instance, Hadrian, Severus, Antoninus, M. Aurelius; under the Christian, Constantine, Theodosius, &c.

2 Eccles., xii., 13.
gracious effects of His continual bounty. The principal end in rational beings consisting in communion with, and conformity to, the Sovereign Good, which is God; and that communion no otherwise obtained and preserved but by religion only, should, above all things, be our chiefest aim. In a word, religion consists in our piety to God, sobriety to ourselves, justice and righteousness to our neighbour; or, as St. James, more excellently, "Pure religion and undefiled is to visit the fatherless and widow;" that is, by acts of charity and mercy, to keep ourselves unspotted from the world.

Thus, religion qualifies the Christian, and enlarges the understanding, enabling us to discern beyond the narrow confines and scantling of brutish sense and stupid ignorance; to behold and contemplate things invisible and supernatural. And this creates an habitual reverence to some Superior Being, more excellent than ourselves, and incites us to such devotion and services as we apprehend to be most agreeable to His nature. And this, since it cannot be performed without some rites and solemnities, lies in a system of all those mysteries, which concern the knowledge and service of the Deity to be worshipped, and in that manner and way alone He prescribes. And that, being under the necessity of a future state, and sensible of the present needs, we may thereby conciliate the Divine favour, for the continuance of His protection and prosperity.

Maximus Tyrius makes this difference betwixt religion and superstition, that the religious person has access to God without servile fear, opposed to filial
reverence, which is mingled with love; and calls the pious man, the Friend of God, and the superstitious, a mere flatterer of Him. And indeed those pagans worshipped their deities in horror and cruel dread; and, therefore, sought all possible ways to pacify them, by flattering, and pompous shows, processions, and carrying about their images, washings, purifications, corporal severities, whippings, burnings, and cuttings of their flesh; prostituting their wives and daughters, and cruelly sacrificing their children oftentimes, with a thousand prodigious impieties and troublesome methods. This was not religion in the true notion, but superstition; or, if you will, false religion, as hereafter we shall come to show. Religion amongst the wiser heathen was far from this. It was to do nothing unbecoming a reasonable nature, or molest the civil powers; and to restrain all exorbitant passions and appetites; though, indeed, it did not give those checks to the mind, and form in the best of them those noble qualities and perfections, which the true religion only teaches, and enables her votaries to do.

SECTION II. RELIGIOUS WORSHIP.

What it is, we have partly shown in the former section, namely, the worship and adoration of the Deity, operating practically and sincerely; that we believe and rely on what we worship as our sovereign good, from whom we expect both present and future happiness; or, as others, it is an awful regard of God, as a
punisher of vice, and rewarde[r of virtue; whose perfections produce the love and imitation of His worshipper.

Wherefore all religion and its worship consists in these two things:

1. Credenda.
2. Facienda.¹

The first respects the true knowledge of God: the second, how He is to be worshipped and served. The one has regard to the law, the other to the gospel, as faith, prayer, good works. Then, as to credenda of the being of God, &c., we have at large made out: the facienda will follow in its due place.²

Now, though none, save man, do worship God after an intellectual manner, yet do all creatures, yea, even the most insensible and inanimate, speak the praises of the Deity, in their operations, virtue, power, and several courses. And, therefore, holy David calls upon them all to magnify Him for ever. But, to speak more particularly, religious worship is the duty and service which the creature, particularly man, pays to the Superior Power, be it by prayer, confession, praises, thanksgiving, sacrifices, kneeling, prostrations, humiliations, for the obtaining or preserving some good thing, or deprecating evil. And the rites and ceremonies of these are so many and various, that what should be natural, solemn, and rational, is, through the corruption

¹ "Matters of Belief." "Matters of Practice."
² Chapters vii., viii., x., xii.
of our nature, and the cunning of Satan, and his lying spirits, turned in most places to superstition. Not that all ceremonious worship is evil, when the heart accompanies the action, seeing some rites and outward usages are highly necessary for the exciting and stirring up our inward devotions. But where they make the outward ceremonies of worship the main of the religious service, as seeking to conciliate the Deity, and expiate sins by virtue of the work done. It were endless to enumerate the several manners of the worship which the blinded world paid to their gods, idols, and heroes; their sacrifices, libations, aspersions, festivities; and after what impious and ridiculous sort they performed abundance of their religious services, as they occur to us in Diodorus, the Sicilian, and other profane histories. And indeed it would be hard to find any sort of people who pretended any religion, but took care of some external solemnities, and the decent circumstance of its worship; and therefore we find so many temples, oratories, altars, and groves,—so many statues and shrines, set up in the world,—so many dedicated persons of both sexes, priests, priestesses, vestal nuns, flamens, augurs, and the like, to manage their devotions.

SECTION III. NATURAL RELIGION, OR THEOLOGY.

Now, since the soul of man is sensible how she governs and informs the body, she cannot but resolve, that some Spirit or Being it is which rules the universe, and, consequently, the Soul herself: and, therefore,
that Being ought to be regarded, worshipped, and obeyed. And this, certainly, from a natural and indelible, as well as rational, principle, partly written in our hearts, together with those necessary dictates, without which there can be no religion, or rule of living in the world; such as the equity of doing to others what we would have done to ourselves, reverence to our parents and elders, affection to our children, gratitude to benefactors, and the like. To these add the accusations of conscience upon the committing of some unnatural crime, or injustice, &c., whereby those natural duties are violated. Not to insist at present on the Divine laws, Mosaical or Christian, but on those which are moral and immutable; namely, such duties and actions as proceed from a rational creature, voluntarily and freely teaching us to adore our Maker and Benefactor.

It is this moral or natural religion which the very heathen thought worthy of them, as men, to be paid to the Divinity: and that the offenders against it should be punished with the severest evils. Murder, adulteries, perjury, and the like crimes were amongst them all detested; and, consequently, humanity, chastity, temperance, sincerity, and other virtues, were to be cherished and rewarded. Piety to the gods, and sacrifice, were of the same estimation. In a word, the entire Decalogue seems to be the law and religion of Nature herself, not one commandment of either table excepted. Nor this without the wonderful and special Providence of the Great God; since, without some
inward and natural law of right and wrong, good and evil, the state even of Nature itself (as it concerns mankind) had long since lapsed, and sunk into confusion. Had there been no justice to punish, and reward,—no inward coercion of the magistrate to restrain exorbitances, how could any government have subsisted? Wherefore, mankind was always under a law; even before God made any extraordinary promulgation of a law, man was a law to himself. His duty was written on his mind, that God might judge the world in righteousness, since where there is no law there is no transgression. The main duties of piety towards God, and justice towards man, &c., being duties inscribed on the tables of our very hearts. And we feel a secret obligation to them within ourselves, approving or condemning what we do. And this is what I call Natural Religion, or the Light of Nature. Not that it is not as much the law and ordinance of God, as what He has revealed; nor does Divine Revelation at all extinguish the light of Nature, which is Reason: but approves and gives sanction to it.

Now, the nature of man consists in four degrees of perfection:

1. Of being.
2. Of living.
3. Of animality.
4. Of rationality.

Of all which, the last alone concerns the supreme and sovereign good of man: For, supposing him put

1 Rom., iv., 15.
into the world to exist, and only be in it, what needed he any other life than that of a stone or tree? If only to live, what necessity of understanding? And if to exercise its animal functions, what need of reason?

To what, then, can the nature of man be ordained (all other beings in the world attaining their perfections and utmost end), than to exercise his reason upon such objects as are proper to it? And, seeing it does not consist in vain and speculative studies, gratifying the sensual part and brutish passions, it must be in studying to know himself, and to acknowledge, that He who made him, and endowed him with such advantages above the other creatures, and on whom all things depend, is worthy of his service and obedience, by living soberly, justly, and charitably, and by imitating those perfections which bring him to the nearest similitude of his Maker. Religion, therefore, is the ultimate and most natural scope, to which mankind is ordained by God. And that this is implanted in him by Nature, the consequences evince; since it is so natural to love and acknowledge those who love and do us good. And if so in man to man, much more from man to God, our bountiful Patron and Benefactor.

Man is made for society, that in society he may serve and worship God; and then, if interest unite, the benefits all perpetually receive from Heaven should unite and tie us faster to Him. If fear (according to the Hobbian doctrine) should be the only object of our service, whom should we serve but God, since He is only to be feared? Man is not considered as a mere
engine of polity, as that bold assertor would pretend, discarding all religion, natural justice, and charity, and giving the Supreme Deity no other dominion over, or title to, his creature, but power and tyranny! The love and service we call religion is what proceeds from an ingenuous and free agent, governed by the highest reason.

Some have believed the law of Nature so strong and efficacious, as to oblige us, though there were no such being as God. But we have abundantly proved there is a God, Author of Nature, and of all things else, though there were at all no law of Nature. Hobbs, indeed (as we said) puts all mankind into a state of hostility, and affirms that there is nothing naturally just or unjust at all; which utterly vacates and abolishes all Deity at once; and then is all law but the constitution of man, nature having nothing to do in the legislation. But mutual peace, kindness, love, and gratitude, being certainly the intention of the lawgiver, for the preservation of community, sufficiently overthrow the bold pseudo-philosopher's new suggestion, and necessarily infer a virtuous and religious life, separate from his state of war and rapine. If we allow a law of nature, we must acknowledge Him that made that law.

Suppose a poor deserted infant, born and abandoned in some desert place, nourished (as they feign of Romulus and Cyrus) by some savage beast, this child, grown a man, would have some religion, some fear or apprehension of another Being. For, first, as a man, he would love society, and join to others like him, though
he never saw man before, as naturally disposed to love his like. Naturally also he would love his own child, if he had one; would be pleased with a good and friendly turn; and, though all these good dispositions were obscured for a while, for want of objects to exercise them on, yet would they manifest and exert themselves, so soon as he came into company. The same we may affirm of natural religion. Such a person would, perhaps, have little conscience of remorse, because he never had occasion of hurting any body, or opportunity of doing good. The maxims of justice, and other virtues, would not appear, for the same defect of occasion. Nay, perhaps, he would be so stupid as to reflect on nothing, yet it is certain he would have some religion, as soon as his common sense began to revive, and to be cultivated; for he would then naturally reason that the objects and things he daily saw did not make themselves, and that what did not so was some great power and virtue. Thus Nature herself teaches us there is a God: and we invoke His help in distress and adversities. Men, naturally, (savage as some nations are) lift their hands and eyes to Heaven, to implore relief from thence. Nor does diversity of religions destroy all this uniform and general principle, which disposes to religion. And even superstition itself supposes a natural reverence to some God, else it could not subsist; for superstition is no other than natural religion applied to a false and erroneous object.

The confession of a God is natural to man, not as he is a living creature, but a rational creature. And it is
not from blind matter, but evidence of reason, and the
dictates of conscience, which tells us, however we may
attempt to suppress it, that certain actions are in them-
selves essentially evil, and that evil deserves punish-
ment, and that the inflicting of punishment appertains
to God only, because He best knows the degrees and
obliquity of our faults. And hence results fear of being
reproved for them. Of this nature are disobedience to
parents, treachery to friends, blasphemy, ingratitude,
and other crimes worthy chastisement: and this nature,
not education, as some fondly imagine, teaches. Educa-
tion may indeed direct our natural inclinations, and
passions, even to unnatural objects; but can no more
make them new, than it can make a new soul. We
may possibly excite some seemingly new inclination or
passion, which, for lying still and dormant before, appears
to be new, because, till now, perhaps we had no sense of
it. But to put wholly any such new passion in us
were to create new powers and faculties in our souls,
which is not to be done.

Now there is none so strong and invincible as man's
inclination to religion, and the worshipping something
as God. Natural inclinations operate necessarily, and
it is to that we owe the universal consent of owning
some Deity. But, in a state of nature, mankind was
to receive its directions concerning the true object and
nature of their religious worship from natural reason;
which, if they made good use of, would certainly direct
to the worship of one God.

Again, though we have all this reason and evidence
to prove religious duties to be natural, we have yet divers passions in us repugnant to our reason. But he who shall affirm we have no natural obligation to obey the guidance of our reason, being reasonable creatures, were to argue like a fool. Now, since the righteous God cannot be author of those evil passions and inclinations in us, as being contrary to His holy nature, many crimes committed here, and good things done, whilst neither of them be punished or rewarded here, natural reason tells us that there is a judgment to come hereafter, which will reward every one according to his merits.

That there are crimes against the light of Nature (whatever some pretend upon the score of education, and political laws, to keep men in subjection) such as sacrilege, adultery, parricide, blasphemy, preposterous lusts, and the like enormous villainies, we find all men and nations universally agree, as in principles of nature, and not of custom and education. For man being born for society and mutual help, such crimes would certainly destroy it; and being obliged to follow reason, that reason forbids such wickednesses as are destructive to it, and, consequently, to man's nature. There is therefore a prime and fundamental law enjoining every man, namely, Reason, which naturally distinguishes betwixt good and evil, as the basis of all government, and discipline whatsoever. These are eternal principles natural and true, and never alter, nor ever was there a time when they were not so. Justice, temperance, natural affection, sincerity, gratitude, and the like, need
not the help of education to recommend them to all mankind. Nor need we be taught that we should suffer a small and trifling loss, for the obtaining a greater benefit. Self-preservation, and the love of ourselves, prompt us to these with no other mistress than Nature. The same teaches that drunkenness and intemperance is a shameful vice, that ingratitude is base, that we ought to revere our parents, love our wives and children, reward the labourer and those who do us courtesies—in a word, do as we would be done by. And when we do the contrary, something there is within, which flies in our faces, and we fear the Divine Nemesis, or Revenge, which proves a natural atrocity in such like actions, and does not proceed from those customary prejudices, from which some pretend they spring.

The universal custom of sacrificing throughout the world, in all times and generations, was an actual confession that sin deserved death, and that the Divine justice required punishment or satisfaction. Nor is it to be shown that it ever proceeded from any Divine revelation or command, but from a very principle of Nature, as it were; though indeed the rites and ceremonies about it were prescribed afterwards to the Jews. And something there is in it of extraordinary, that the very heathen should think that the offended gods should be pleased or appeased by the death of an innocent creature's blood, and doubtless the reason of Holocausts, and other sacrifices by fire, did signify that no expiation could be without combustion of the whole or part;
since one man, offending another, was commonly the object of revenge, even amongst men.

Naturally, they worshipped such beings and things, as either they received most good and benefit from, or were most in fear of. And hence sprung their worship and adoration of the Sun, Moon, Heavenly Orbs and Constellations; Jupiter for Rain, Ceres for Corn, Bacchus for Wine, Eschulapius for health, and the rest. The Egyptian and Grecian theology was a kind of astrological magic, founded on the hypothesis of their demons, and the heavens, which they thought they governed. Not that they believed the slum wrought any such stupendous effects, or impregnated their talismans, by their proper virtue; but as they were intelligences themselves, or divinely influenced, and directed by the spirits residing in them, and ruling part of the inferior world. They fancied the sun a kind of archangel, and some called it the organ or instrument of God, the Divine harp, whose harmony set in motion the rest of the celestial bodies.

Nor naturally did they worship their idols, at first, as true gods, but as symbols only, and representations of such as they loved, and esteemed themselves obliged to. For it was not possible he who carved a piece of stupid wood, or the like inactive material, into the figure of a man, should believe that could help him in time of adversity, which, being set in a niche or hole, could not preserve itself from rotting, being burned, or stolen away. But it was process of time, and false principles, which (as we have showed) depraved and corrupted the
after age. From venerating the pictures and images of their fathers and benefactors, they fell to deifying of them, and then was there no end of their superstition. But this was the corruption of natural religion, which induced men to worship the great Creator, from the contemplation of the fabric of the aspectable world, the regular course of the heavenly bodies, and the goodly economy of the universe. And certainly this was of all other the most rational and natural, and, being accompanied with a sincere and moral life, did come the nearest to the true motive of worship.

But how far one may go in religion, by natural light only, is by no means to be relied on, though the wise and virtuous Pagans were charitably thought of by some even of the Christian Fathers (before their hot disputes against the Pelagians) and the modern Jews. Doubtless, so far, as to rise in judgment against those, who have had the full meridian light to guide them, and have obstinately shut their eyes, because they loved darkness more than light. Wherefore we leave them to their own master. How God may deal with these delirious Heathen, we are not to judge, only this is certain, that none are saved but through the merits of Jesus.¹

From all that has been said, it is evident that religion is so necessary, and so natural to the well-being of the world, and so rational, that even a false religion, conscientiously practised, were better than none; and that such as have been the most pious and religious

¹ See a Treatise on Pagan Philosophy, by Francis de la Mothe.
have been blessed with many temporal things, and the contemners of even the false gods, and holy things dedicated to them, never prospered, as may appear by innumerable instances of sacrilege and profaneness, perjury, &c., which have been signally punished.

Besides that, religion, above all, conduces to the enlarging and regulating our faculties, and rendering us invariably happy and tranquil. And that it really gives a man a kind of participation of the Divine Nature, exalting the understanding, regulating the will, cohibiting and restraining the passions, governing our appetites, and producing a self-satisfaction unspeakable, makes us easy to ourselves and others, fills the soul with joy at its present condition, and contemplation of the future, gives him a steady assurance, and serenity of mind, whatsoever happens of change or vicissitude in this world. In a word, religion is all kind of felicity. It renders a man debonair, gentle, patient, charitable, and easily reconcileable—top-full of inward joy and complacency. So true is that of the philosopher. True joy consists not in raillery and loud laughter, but in a placid and sober cheerfulness.¹

SECTION IV. CONSCIENCE.

Conscience, as a part of natural religion, is God's supreme tribunal, erected in every man's breast, and is that little consistory of the Soul, as Philo calls it; and, as Antoninus,² the voice of God, the domestic deity; where He

¹ On this, see the most excellent and pious Dr. Barrow.
² Ἑὐοκὸς Ὁδός. — Anton., lib. iii.
keeps a perpetual sessions—where, as God's Vicegerent in the minor world, he accuses, judges, executes, to punish, reward, and crown, according to our deserts.

It is His spy and intelligencer—monitor and recorder, and a thousand witnesses, from whom none can abscond himself, none can fly. She is the very image by which man represented his Maker in innocence; and so absolutely necessary for the conduct of our lives, and maintaining the dignity of our nature, that without her we should degenerate below that of brutes—be more savage and indomitable. In a word, conscience is the supreme reason—the highest act of the practical intellect, and may be said as much to constitute the definition of man, as any thing which distinguishes him from the beasts that perish. Not that it implies any distinct faculty in the soul, by which we comprehend those natural notions concerning good and evil, by a compound act of reason; but that which seems to be a certain innate habit, or active principle, radicated in the very being and constitution of things themselves, without any dependence on custom, positive laws, and sanctions; namely, a law written on our hearts, to which not only all our actions but all our thoughts are accountable.¹ She is an intellectual memory of what our reason dictates; and does accordingly elect, examine, accuse, convict, excuse, absolve, or determine absolutely, and without partiality. She is still the same in solitude or in company, at home and abroad, by night and by day; she goes abroad with us, returns home with

¹ Rom., ii., 15.
us. She thrusts herself into all societies, all business; is privy to our most secret recesses and designs, pricks into our closets. There is no charm, no bribe, no chain able to bind her; no sense of the body so nicely tender. She is the very eye of the rational soul; the least mote or dust grieves and offends her; nor is she ever at peace till it be cast out. And to this most absolute despot on earth was all mankind obliged, even before there was made any external revelation, or promulgation of other law. Nor to any creature was it else prescribed, because man only was endowed with reason and self-reflection.

The characters inscribed in conscience are indelible; no tyrant could ever silence her. She is the boldest thing in nature; clamorous to eternity, till she be heard and satisfied: nor lies there any just appeal from her tribunal. And though she may sometimes possibly err, and be misguided, sometimes clouded, and, for a time, in a kind of slumber, the least noise awakes her, and then she barks afresh, and stings like a thousand scorpions. In sum, Conscience, as Tertullian,1 truly calls her, is the most irrefragable and convincing argument that there is a just and righteous God, whom we are religiously to worship; and that, however Atheists and wicked men may hector it for the time, and seem to bear it out, the wound remains. "Manet alta mente repòstum."2

God Almighty never bestowed a more divine and ex-

1 De Animà.
2 "Deep graven in her heart the wound remains."

Dryden's Virgil.
cellent gift on mortal man:¹ not only in the sense of Christian men, but by the suffrages of the wisest Heathen, as, besides others,² Cicero, above all the rest, has shown in that incomparable piece, his Offices, which I hold to be one of the best books of Cases of Conscience that was ever published, after the sacred Scriptures. Would that our young gentlemen did study well that book! (to say nothing of Seneca, Antoninus, Epictetus, Plutarch, &c.) it might show them there was such a thing as religion and natural conscience, directing men to the virtues of piety and justice, before there was any revelation, as is made manifest to us by a singular and peculiar grace. For St. Paul has intimated as much as this to the proselyte Romans—"Because" (speaking of the Pagan world) "that which may be known of God is manifested in them, for God has showed it to them: namely, things invisible by things visible, the creation of the world manifesting His power and Deity, so that they are without excuse."³ For when the Gentiles, which have not the positive law," (as the Jews had, by extraordinary revelation) "do by nature the things contained in the law, these having not the law, are a law, or religion to themselves, which show the work of the law written in their hearts; their conscience also bearing witness, and their thoughts the meanwhile accusing or else excusing one another."⁴

³ Rom., i., 19, 20.
⁴ Rom., ii., 14-16.
To conclude: the law of Nature is as much the law of God as what is revealed; seeing it teaches us those virtues and religious precepts, without which no religion will bring us to happiness; inasmuch (as we showed) even some of the more charitable Fathers and devout men, as Justin Martyr, Clemens Alexandrinus, St. Chrysostom, and others, had favourable thoughts of the salvation even of some virtuous Pagans, living according to the light of nature. Let us leave them to the infinite mercies of God, whose ways are in the dark abyss, and who will have mercy, on whom He will have mercy; though upon none without the influence and merit of a Saviour; nor to us is there any other name given under Heaven by which we may be saved, as we shall come to show in due place. Waving, then, all revelation for the present, let us hear the Theist.

SECTION V. THEISTS.

Many, to whom all religions are alike, are forced, from the invincible power of natural reason, to confess that there is a God, and that he is to be worshipped with rational adoration. Something, of necessity, must be first and eternal; otherwise, never could any thing have been which is. And He who made all could have no matter which He did not make: for, if any thing was made, which He did not make, then He did not make all. But something did make all: nor can any thing make itself, for then it must be before itself, which were absurd. If there had ever been nothing, or no cause, nothing could ever have been: something, there-
fore, must be, that never was made—some ἀὐτόφυες self-originated, and eternal; and, therefore, whatever difficulties there may be in the notion of an Eternal Being, something eternal must be acknowledged. And much more obvious and rational is the notion of a First Cause, than to constitute either matter, or the universe itself, eternal.

To say that Nature made all things, is to say that God did make all. Nature is, otherwise, a thing that does not know, but acts by the direction and appointment of something which does; and, therefore, our Hobbists and new philosophers are pleased, or rather forced, to allow God an understanding, perceptive existence, though, withal, that He does all things arbitrarily, without any rule or nature of goodness, justice, and the like. Indeed, God does not all things immediately in the productions which we daily behold, but He governs the motion of matter, and what we call Nature, to the form designed. And though that Nature do no more comprehend the reason of what it does, nor the end wherefore, yet she acts regularly to that end, guided, as she is, by a mental causality.

The Cartesians tell us that there is no such thing as substantial life any where; and that even human volition is mechanically produced from certain effluxia and exuvious membranes, as it were. They will not endure any scale or degree of entities, lest they should find a link or chain which should bring them to a First Being.

In the mean time, to imagine that a gross body—toosed and jumbled up and down, and beaten to an in-
visible dust, should be pounded and sifted into rationality, wisdom, a vastly understanding soul, and invent such arts and sciences, performing such admirable effects —were to debase mankind to the utmost degree of credulous folly. That chance, which never yet composed any thing, should make the most admirable of all the works of God! Socrates, Plato, Cicero, and the rest, believed that God created the world, though holding matter to be eternal; supposing three things in God, matter, idea, and the divine conception. But matter, doubtless, as well as what was educed out of it, was made by God; and He who created spirits and substances immaterial (for out of what pre-existent matter could He make them?) could certainly create matter out of nothing—nothing, at least, which we see or can conceive, nor out of any thing which He did not make; as our blessed Saviour effected miracles by a word only, without any dependence on matter. Nothing is made of nothing, therefore, as to our sensible comprehensions; which yet may be understood by abstracted notions of reason, seeing we are ignorant of infinite possible powers and possibilites. We daily see and contemplate works of His power, not how He operates, Opera ipsius videntur oculis; quomodo illa fecerit ne mente quidem videntur, as Lactantius elegantly.

Matter, therefore, doubtless, as well as the things made out of matter, was created by God, who, in making matter, made all things: seeing the things made are only through the modification of matter, but not by fortuitous and epicurean chance. This established, safely
might the first philosophers affirm nothing ready made but matter.\textsuperscript{1} Wherefore, says St. Basil, God was not only the inventor of the scheme and figure, but Maker of Nature herself.\textsuperscript{2}

Again, what the artificer is to the work of art, the same is the Creator of all things to the universal works of nature; though, by the same means, which are the testimonies of the creature, we are led to that independent Being which made and maintains them. This is a prime notion of a God; not from the ratiocination of a few illuminated ones, but the sense and argument of those who subdued all the then discovered world, namely, the Romans, who are reported to have found no atheists among all their conquered nations. So that, if any of them there were who professed no religion, it does not follow they own no god; though perhaps they denied His providence, as did the Epicureans. And, if any others there be, they are so very few and incon siderable, as cannot amount to the least prejudice of the truth. And whether at some time or other they apprehend nothing, is very doubtful, or rather, there is no doubt at all but they do, the principle of a deity being so universally obvious.

To approach still nearer the light, whether of nature or obscure revelation, we find the most cautious of the heathen philosophers, Hermes himself, naming one God, Father, Principle, Creator of all things, ascribing eternity to Him, and divers other Divine attributes; for

\begin{itemize}
\end{itemize}
which he acknowledges all worship due to Him. To the same effect, also, Zoroaster, out of whom some would produce no obscure glimmerings of an early notion, among the heathen, of a Trinity. And such expressions are so clear and frequent in Trismegistus, that one would be astonished at the spirit and majesty of his writings, especially when he treats of the nature and works of God.¹ And the sect of the Pythagorean Gymnosophists, as the Brahmins of this day, retain abundance of this. Likely it is, I confess, that Pythagoras might learn something from the Jews, among whom he so long conversed; but certainly he could not have that of three Deities, which was the religion of his particular sect. And yet, such a notion it seems they had, though in another place he owns but one, whom he styles All in All, Origo, Mens, Vita, &c.²

Nor is it only among these we have a Deity plainly acknowledged, but His Divine attributes also. He is called Father of the world, the only Essential Being, with other scriptural expressions. The like we meet with in Jamblicus, speaking of the unity and power, whence he derives an argument for the silent and spiritual adoration due to God; as both Proclus, Simplicius, and even Porphyry himself acknowledge; especially

¹ It is true that this work is suspected to be of a much later date; but, for my part, I never could find the man who challenged it from him, and it is questionless so ancient, as we hardly guess when it was written.

² To this accord Parmenidas, Empedocles, Xenophon, Hierocles, Thales, Anaxagoras, Timæus, and many others.
Plotinus, and generally those of the Academy. Whenever, says Plato, I mention but one God only, take what I say for good earnest. This, it seems, was the test in those days. And it is observable how he advises his disciples to search after the *mováda*, which Pythagoras calls the *prime*. And, indeed, they did not familiarly name more, whatever, out of depraved custom and popular use, they now and then spake with the vulgar. Yet, as Tertullian affirms, even in their ordinary discourse and communication, they seldom named above one God, always looking up to heaven.

But it were a superfluous undertaking, in an age so well acquainted with their writings, to recite all that might be collected out of these Deists, especially the Platonists, of whom was the great Socrates, reported to have suffered martyrdom for his opinion of the unity of God. But indeed it was not only his, but the confession of all the rest; all of them agreeing in ascribing power, beneficence, purity, omniscience, eternity, and the rest of the divine and incommunicable attributes to Him. Wherefore Maximus Tyrius exhorts men not to set their affections here below, but to contemplate God, and penetrate, even beyond this aspectable world, to the invisible nature. In a word, it is impossible to show that God cannot exist, and therefore plain madness to believe he does not. And, therefore, when a thing is

1 See his Epistle to Dionysius.
2 Cic. de Divin., 1. i.; Seneca Ep., 41, 44, 76; Anton., l. 2; see S. Aug. de Cic. Dei, lib. xi., c. 22.
not by institution, law, or custom, but universal suffrage, it must certainly be true, and consequently a God.¹

SECTION VI. ATHEISTS.²

Atheists are properly those who derive all from senseless matter. These are called our new philosophers, men of high thought, Esprits forts, who yet ascend no farther than this dunghill earth; so as they will have God contribute nothing more to the fabric of the universe than his whirling about the vortices of matter, globose and striate particles, from whose casual motions, according to certain catholic laws of nature and matter, all things, animate and inanimate, proceed; without the conduct, forsooth, of any mind, wisdom, or providence whatsoever. But we have already overthrown these impertinences, no ways averse to the Corpusecularian opinion and mechanism of nature, as the sole contrivance of the most wise and powerful God, for His own glory, and to lead us to the contemplation of His perfections. Take the whole world together, and there is nothing (however things may appear to us singly) but what is worthy of God, and contributes to the use, beauty, and harmony of the whole, and of each particular. And if any evil there be in them, it is not from God, but ourselves. So true is that of St. Augustine, Malum voluntatis efficiens est nihil, namely, evil has no cause besides itself, and has therefore no nature; so as it is the loss of good that has given it name.

¹ On this head see the foregoing chapters i. and ii.
² Consult the two first sermons of Dr. Tillotson, part 1.
Because they cavil that there is so much mischief among wicked men, and that all things are not calm alike; whereas it is argument of a greater providence that men are of several inclinations and tempers for the maintaining of peace and order,—that some command and others obey,—some teach and others learn,—since, but for these seeming contrarieties and subordinations, all would be competitors for the same thing, and there could be no living, no government, no polity; and the same extends to all things else in nature, for the benefit of all. Nor is there any music grateful but has its discords. Thus, the needs of some produce commerce, acquaintance, industry, and show us the use of passions and affections, namely, to exercise our virtue.

Others we find displeased at the structure and fabric of the world. Let its parts be compared together with the whole, and we shall also find nothing but harmony and beauty in it, displaying a variety, and constant in all its revolutions and seasons, which are useful and necessary, not only for us, but for all other creatures: so that what perhaps may be noxious to one is health and medicine to another. For to think so highly of ourselves, as if nothing else were to share with us, were insupportable arrogance.¹

Indeed, when a religious person looks up to heaven, and humbly casts his eyes upon the inferior world, contemplating how many more of God's creatures were ordained to make his life and being here agreeable, he cannot but with holy David break into ecstasy,² and find

¹ Seneca, de Ira.
² Psalm viii.
himself obliged to more grateful returns, because, in addition to all this, he is qualified with an intellectual soul, and capacities to make the best use of what he receives; and, unless he obstinately shut his eyes, must acknowledge God in all he sees. For, to require other demonstration, and to believe nothing save what they see, as it is absurd, so it is not possible any rational creature should be so stupid. To think all things demonstrable, takes away demonstration itself: nor is there any Atheist of them all but believes innumerable things which he never sees. Besides, all religion consists in objects which could not be and exist if they were visible. Thus, we see not the past, nor future, nor are our very hearts and souls to be seen, without our own destruction; yet, both exist, or else we could not live. We should therefore take estimate of the powers from the effects, and not the contrary. We wonder how the soul survives the body, when we should more admire how a spirit should unite with matter. The union of the soul and body is more stupendous than their separation. Who can comprehend the alliance of a substance extended, and that takes up place, has bounds to contain it, and only acts at present upon other subjects, with a thing that has no figure, extension, colour, fluidity, or solidity; and yet which is everywhere, whilst destitute of parts? We admire at the mention of a Creator and His providence in preserving all things, when we should rather wonder how we have lived so long in the world, for what purpose, whence we came, and what will become of us. O, the depths of the wis-
dom of God! How inscrutable are all His ways! But of this see Chapter X, where we have more at large shown the absurdity of requiring demonstration and miracles to obtain belief of things which prove themselves. Incredulity here is the most foolish and dangerous; for its consequences are affected ignorance, pride, singularity, disingenuity, obstinacy, uncharitableness, suspicion, laziness, (what shall I call it?) monstrous ill-nature, and worse, near the sin against the Holy Ghost.

There is nothing which Atheists and half philosophers (unworthy of that name) do more ridicule than the punishment and fire of hell: that, being a thing material, it should operate on immaterials; not considering that the holy scriptures make use of divers such images, as are known by every one, to represent what is otherwise inconceivable; and therefore borrows that of fire and brimstone, storm and tempest, the never-dying worm, outward darkness, &c., (such as the Egyptians felt) the valley of Hinnom, and the like, because there is nothing more tormenting and affrightful than those pains in which fire and these ingredients are used among cruel men.

And the same may be said of heaven and the abodes of the blessed—the description of the celestial city drawn by St. John;¹ which all indeed fall short, if literally taken. But that, which they represent, is infinitely greater than the highest ideas can produce to resemble them by; but yet such as best convey their

¹ Rev., xxii.
meaning to all the world; there being nothing here on earth, which can better affect us, and our imagination, to comprehend the dreadfulness of the damned receptacles, and the glories of a Heavenly Paradise. Were they any other ways described, and as they are in themselves, we should not understand them while we are in this frail and mortal state. They exceed our utmost capacities at present, but may sufficiently stir us up to avoid the one, and strive for the other. The like may be said of the solemnity of the Last Judgment, by resembling it to the circumstances of our earthly tribunals, and assizes, where criminals are tried, acquitted, or condemned. And with similar images has our blessed Lord represented several sublime and real mysteries, as of the Spouse, the Virgin, the Marriage of the Lamb, the Master and Servants, the Shepherd and his Flock, Tares and the Wheat, the Rich Man and Lazarus.

The like quarrel have they to that of the soul's immortality, though the very Heathen have been persuaded of it from the beginning. Aristotle\(^2\) confesses the soul to be ἀπαθής, ἀμυγής, ἀπλόνς, impassible, pure, simple, and consequently not subject to corruption. And what means his ἑντελέχεια, but a divine principle?

But I shall need pursue this no farther, having already done it so copiously in Chapter III. In the mean time, that which seems to have led men into these later absurdities may have been the schools, fancy-

---

1 Seneca, Ep. 65-117; Cicero, De Amicit. Tuscul., ii.
2 De Animā.
ing real entities, and substantive qualities of matter, distinct from the modifications of bodies, and yet gen-
erable out of them, and conceptible into them. Whereas, though all life of a compound nature be indeed dissipable, our souls and real entities remain entire, when divested of this gross and material flesh.

Then, as to other spirits, apparitions, and miracles, which Atheists deride, though there are (it is confessed) many impostors and cheats for secular interests, yet true ones have been so attested, in all histories and ages, by matters of fact, laws, and other authentic records, that it were impudence to disbelieve them, as we shall come hereafter to show.

Finally, predictions have been asserted, also, by the gravest philosophers. Why, then, should we call into question what the heathen made no doubt of, who have a more sure word of prophecy; for their oracles often told them lies—the Scriptures of God never. Many of them were acknowledged by the Pagans themselves, as that of Daniel, by Porphyry, and others; of which in our Eighth Chapter.

They had, also, imperfect notions of the Fall of Man, and of his having been once in a more happy state. A fragment of Cicero gives us no obscure hint, where he says, as if some prophet or expounder of the Divine mind had said, Nos ob scelera suscepta in vitá superiore,

1 See the learned Cicero's book, De Divinatione, where he tells us of a discourse written by Chrysippus, and that many of them came to pass, doubtless, by God's permission.
The poets sing of the golden age; and Hesiod's fancy of man's misery, through the curiosity of a woman opening Pandora's box, is not to be passed over no more than Plato's, ἄνδρόγυνος, or woman cleft out of man. The immodesty of the old heroes and the gigantic rebellion has authority among the heathen. So the story of the Flood. And their general assent, that all the world shall one day perish by fire, that it also had beginning out of chaos, and that night begat the day.

They held two principles, Deus and Daemon—one good, the other evil. And Homer feigns an invisible power, which walked about the world, inspecting the actions of men, and of God's special residence in some higher orb. In a word, these opinions were not only taken up by the vulgar and ignorant alone, but asserted by the most knowing among them, and it begat veneration in them to their deities. And they oftentimes appealed to them and to the judgment to come, as Clemens Alexandrinus abundantly proves. Nor was this ineffectual for the conduct of their lives. They abhorred incest, had solemn laws of matrimony, they took care of their parents, decently interred their dead, practised both distributive and commutative justice, and for other moral virtues exceeded many Christians.

These, and sundry more religious particulars, whether coming to the rest of the world from the Chaldaeans, Phenicians, or Egyptians, by books or tradition, from

1 "We are born to undergo punishment for crimes committed in a former life."
where the first letters and more useful arts proceeded; and from places nearer the terrestrial paradise, and derived to us from the most ancient historians, have great weight with considering men. As Aristotle well conjectures, that though the greatest truths might, in tract of time, be much corrupted, yet those which came from the earliest times carry, evidently, marks of sincerity. Their descriptions of the infernal regions, and punishment of evil-doers there; the placing their virtuous heroes and benefactors among the gods, where they enjoyed light and perpetual repose, were not the fictions of poets only, since we find Socrates discoursing of his migration and departure to a mansion where the gods inhabited.

Were there no prospect beyond the present phenomena, conscience would not be so clamorous and unquiet after the committing some facinorous crime. Nor would the stoutest persons, as some we read of (and others we have known), fear the dark, like children, and the burying-places of the dead. The boldest Atheist has dreaded thunder. And if there be no God or account to be given after this frail life, why, of all others, are they, of all others, unwilling to die, though ever so miserable and ill at ease here? They object the common calamity which befalls the godly, as well as impious, many times in this life: but take not the pains to observe how infinite numbers more, who led debauched lives, and are as without God in the world, come to more fatal ends. Whilst the signal disasters of profligate men are remarkable in more frequent and
fearful judgments, they overwhelm them suddenly, and all ages have taken notice of the circumstances. Thus tyrants, oppressors, persecutors, murderers, adulterers, perjurers, sacrilegious persons, traitors, profane and atheistical men seldom escape vengeance in this life. Witness Alexander, Caesar, Nero, Domitian, Judas, Absalom, Abimelech, and innumerable others of elder times. To whom we may add, of nearer to us—Richard the Third, Pope Alexander the Sixth, and most of those who lately acted that inhuman tragedy among us, whose carcases came, by the gibbet, to infamous ends.

And we see a secret moth consuming private families for sacrilege, oppression, rapine, injustice, bastardy, and the like. The strange detection of murders would fill volumes to recount them, and the cruel persecutors of God’s people rarely came to their graves in peace, of which see that excellent plea of Lactantius, newly come to light. Solomon tells us a bird of the air shall discover treason. And seldom do we find notorious villanies and bloody persecutors pass unpunished even in this life. On the contrary, the rewards of virtuous and religious persons are as conspicuous, if not in worldly riches and external splendour, yet in inward comforts, contentedness, and acquiescence, cheerful and healthy lives, patience in sickness, and ravishing hopes of future joys when they come to die.

To conclude:—things future are so above our comprehension, that the wisest men are but good guessers. None but the Maker of all things, and who gave His

1 De Mortibus persecutorum.  
2 Eccles., x., 20.
creatures faculty to work, and who rules and directs their operations to their several ends, can possibly see the effects depending upon those causes. And, therefore, by what means we may be assured of a prophecy, by the same we may be of a Deity. For, unless all records of the world were forged, and all notices of history designed on purpose to put a cheat on posterity, and abuse their own children, whom all parents in all ages have cherished and wished happy, there can be no pretence to suspect the being of a God. All the works of nature are uniform, and there is a certain sphere of every creature's power and activity. If, then, any action be performed, which is not within the compass of the power of any natural agent; if anything wrought by the intervention of a body that bears no proportion to it, or have no natural aptitude so to work, it must, of necessity, be ascribed to some cause transcending all natural causes, and universally disposing them. Thus, every miracle proves its author to be God, and every act of omnipotency is a demonstration against the Atheists.

Our own consciences within us find comfort and approbation in virtuous and honest actions, and remorse for wicked and base ones. The most obdurate Atheist and pagan have (as we showed) acknowledged it. Nor is it to be obliterated by any possible means. Consider we Caligula, who, though a professed Atheist, yet hid his head under a bed at the thunder and lightning, upon consideration of his guilt; so that, what in his obstinacy and wilfulness he denied, he, by that involuntary action,
confessed. When, therefore, this truth will not be confessed, it shall be extorted at one time or other. How unhappy, then, he who denies a God to himself, and proves it to another! And what a madness not to acknowledge Him, of whom it is impossible to be ignorant! Though some ungracious children may be so wicked as not to honour their parents, we never heard of any one who denied they had them. For man being the only nature capable of religion, that is, of apprehending a Deity, and expecting future rewards and punishments, no endeavour could utterly suppress it.¹

They deny it in the day, says Seneca, but confess it at night. God is the principle of the knowledge we have of His existence, both by His works, without in the visible world, and in the impressions He has engraved in our souls. And if any be who deny this truth, they are to be looked upon and treated rather as monsters than as men. Indeed, custom and education do, for the most part, sway men more than serious reflections on the reasonableness of believing a Deity. But that proceeds from their desire of gratifying a present, sensual, and inordinate passion. They give themselves no leisure to recollect, and make use of their reason, which would certainly lead them to be religious. It is not, therefore, any prejudice of education conducts us to the belief of a God, and that He ought to be wor-

¹ Cie. de Legibus. Ex tot generibus nullum est animal, quod non habeat notitiam aliquam Dei; ipsisque in hominibus nulla gens est, neque tam immansueta, neque tam fera, quæ non, etiamsi ignorant, qualem habere deum debeat, tamen habendum sciat.
shipped by us, but a necessary consequence of all they see in the creation. No effect of education or custom forces us to believe all the wisdom, power, goodness, and perfection of God; that He loves, provides for, and expects His creatures should love, acknowledge, and adore Him, and condemns all impiety, and such actions as are destructive to our well being; that God should be so good and merciful to impious men here, and virtue go unrewarded, if there were not a just and certain dispensation to come.

These truths, not our education, but common sense and natural reason evinces. To affirm that God approves and loves all men and actions alike, good and bad, were to make the fountain of justice and virtue wicked and imperfect; which were to render Him no God, or one at least who takes no notice of our actions. If it be objected that God, of His Omnipotent power, being absolutely free to do as He will, may voluntarily lay aside all thought and concern for us, it is answered, that God must needs know himself, and, if so, all beings that ever issued from Him; and, contemplating His own beneficence, cannot but regard those objects for whose sake His goodness and bounty is communicated. For God's perfections being infinite, nothing can be pain, or molestation to Him.

The Atheist, then, is grievously perplexed betwixt these two truths:—the One, that certain actions are wicked, because their own reason, conscience, universal consent, natural law, and every thing else enforce it; the other, that wicked actions ought not to be attri-
buted (as to their principle) to that God who condemns them, and has imprinted in our souls the same sentiments by the light of Nature and our reason.

But supposing, with some learned men, who are yet far from being Atheists, that the knowledge of a Deity be not connatural to our souls, for that the Soul has rather (say they) no in-bred knowledge at all, or of any thing from the beginning, but is a rasa tabula, without the least character of knowledge imprinted in her, unless we were assured of her pre-existence. For this cause, God never charges any with their ignorance of Him upon that account; so that men cannot ground their knowledge of God’s existence upon self-evidence; for whosoever shall deny it, can (say some) by no means be convinced; it being irrational to tell one who is in doubt of it that he must believe it because it is evident, when he knows that he only doubts because it is not evident to him, at least. But, though this were so, yet that God is, will be apparent to us so soon as reason exerts herself by its connexion to other truths; as the dependency of inferior beings leads us, whether we will or no, to the Superior Independent Being, or nature of infinite perfection, potential and causative of all other beings.¹

To conclude, then: it is a most dangerous thing to be an Atheist; or, if men be not such, to live like

¹ Deus est Suum Esse; sed quia nos non scimus de Deo, quid est, non est nobis per se notus; sed indiget demonstrari per ea, quæ sunt magis nota, quoad nos, et minus nota quoad naturum, scilicet per effectus.—Aquinas.
Atheists. For, whatever becomes of those who are of a false religion (which we next come to treat of), he that is of none is sure to perish. If the one be upon an uncertainty, the other is upon an impossibility, of being saved. It is, therefore, better by far uncertainly to err than certainly to perish. The weakest hopes are better than utter despair. But the thing they fancy is an absolute annihilation, which is but a very melancholy meditation; and, whatever they pretend, the dread and horror of death perplexes them; but why so if there be not something after death which they fear and doubt of? The frights and torments of a guilty conscience and of revenge, even in the heathen, put this out of the question.

There may be, indeed, numbers of practical Atheists, as daily, indeed, we find too many; yet it is hard to believe it possible there should be any speculative Atheist. There are many other most convincing arguments and motives from the creation of the universe, the great and lesser world, man, and the Providence of God, in preserving and governing them, which we have abundantly produced in most of the foregoing Chapters, to evince the being of a Deity, and confound the Atheist; and, therefore, we will here shut up the present.
CHAPTER VI.

OF THE FALSE, PAGAN, AND GENTILE RELIGION.

SECTION I. RISE OF IDOLATRY.
SECTION II. IMAGE WORSHIP.
SECTION III. PAGAN PHILOSOPHY.

Primus sapientiae gradus est falsa intelligere.
Lactantius.

SECTION I. RISE OF IDOLATRY.

The false and Pagan religion sprung from the corruption of the natural, which was first itself corrupted by the Fall of Man, who only had it in perfection till he lost his innocency. So those impaired remainders of it, which some of his immediate posterity retained, were well nigh lost, and extremely adulterated, by tract of time, from the posterity of Cain. And this corruption was so universal, that the Deluge, which swept away the whole world, excepting eight persons only, did not so cleanse the race of mankind, but that, soon after the flood, Idolatry and Superstition perverted it again in the grossest manner; turning religion, and the worship of the true God, into all manner of licentiousness and superstition. Satan, the god of this
lower world, blinding their eyes, the religion they pro-
fessed was such as their own imaginations had set up,
worshipping and serving the creature more than the
Creator, who is God blessed for ever.¹

Now, what their religion was before that general
cataclysm, which swept away things as well as men,
is no where described for us by any human author of
credit. Their sins and wickedness was it, which
brought upon them that swift destruction we have in
Genesis. Men, multiplying in the earth, were given so
to luxury, that God, seeing their wickedness was great,
and every imagination of the thoughts of their hearts
evil continually, repented that He had made man.
Nor doubt we but, amongst other their sins, idolatry
had spread itself, even in those early days, through the
subtlety of that old and malicious serpent, who seduced
our first parents from the service of the true God;
whose worship, consisting chiefly in speculation upon
the works of Creation, they celebrated in sacrifices and
oblations from the beginning, clothing themselves with
the skins of the beasts they offered.

But the first objects of their early worship, after the
flood, and perhaps too before it (I mean, of those who
were of the more wicked race, and who had forgotten
that of the true God), might, most likely, as the most
natural, have been of the Heavenly fires, the sun, and
moon, and host of Heaven (as among the Egyptians,
under the names of Osiris, or Serapis and Isis), from
the benefits received by their influence; those bright

¹ Gen., iv.
constellations being reputed to be nearest the seats and mansions of the gods; and therefore named θέος,\(^1\) from their perpetual motions; and chose high places and mountains to sacrifice on, as nearest those constellations. They deemed the Sun a kind of archangel, and called him the organ or divine harp of the Deity, whose harmony charmed the rest of the universe into order; as that of Orpheus did the stones into the city of Thebes. And upon this conceited hypothesis was founded the astrological magic of the Persians and Egyptians, with their Demons and Intelligences, who governed their revolutions, and influenced their superstitious talismans.

Most probably it is that Cham, the profane son of Noah, and his descendants, having, as we said, quite lost the knowledge of the true God, and, choosing Egypt for their country, set on foot this worship, which, as Maimonides observes, was so general, that the notice of any other god was rarely known; ascribing all events to the operations of the Heavens, whom they also invoked upon all occasions, holding up their hands, and lifting up their eyes to them in distress. And this, seconded perhaps by revelations, pretended at least, as Origen thinks, might be allowed by God Himself, winking at their ignorance, before the promulgation of the law, to keep the world from yet that grosser idolatry into which it afterwards fell. But the good father is single in this fancy; though, as it was the most natural and tolerable worship, whilst men received the benefit of their light and influences,\(^2\) they might haply address

\(^{1}\) θέος, from θέω, to run.  
\(^{2}\) Wisd., xiii., 2, 3.
to them as mediators; yet, when they added sacrifices, burnt incense, and performed other rites, and actions of Divine adoration also, it turned to flat idolatry, taking the creature for the Creator. For it seems they stayed not here, nor were they content with these appearances.

The Author of Wisdom¹ informs us at large that the devising of idols was the beginning of spiritual fornication, and the invention of them the corruption of life. Not that it should be so for ever, but as these mighty tyrants (giants as they were called) and vain-glory of men introduced them, so in time those things, which were nothing (for an idol is nothing in the world), should in time come to nothing. A Father, says that author, afflicted with untimely mourning, when he had made an image of his deceased child, soon taken away, now honoured him as a god, who was then but a dead man, and delivered to those who were under him ceremonies and sacrifices. For many of the Pagan gods were only the souls of dead men, called by the Greeks heroes, or by the Latins, Manes; such as Hercules, Æsculapius, &c. And thus, in process of time, an impious custom, grown strong, was observed as a law; and graven images were worshipped by the commandment of kings. For men could not know them in presence, because they dwelt far off; so thus made an express image of a king, that they might flatter the absent. Thus, the multitude, allured by the grace of the artificer's work, took him for a god. And, likely it is, that (as we noted) the Devil, by pretended appa-

¹ Wisd., xiv., 14, 27.
ritions, revelations, false miracles, and tricks, done in and about those statues, persuaded a belief of the presence of the imaginary deities which they represented. And this was the occasion to deceive the world,—men under their calamity or tyranny ascribing unto stones and stocks the Incommunicable Name. Nor was this all; for, whilst they erred in the knowledge of God, they devised other gods, slaying their very children in sacrifice, and used secret ceremonies, revellings, and abominable rites,—the worship of images, not to be named, being the beginning, the cause, and the end of all evil.

Thus the race of cursed Cham, not caring to retain God in their knowledge; nor, when they knew him, glorifying Him as God, He gave them over to a reprobate mind; and, becoming vain in their imaginations, they changed the glory of the Incorruptible God into an image, made like to corruptible man, and to birds, and four-footed beasts, and creeping things; changing the truth of God into a lie;¹ and to what shameful, obscene, and unspeakable villainies, St. Paul gives us the catalogue at large.

Thus, at the beginning, some fond parent, doating on his dead child, might cause his image to be made and worshipped. Not that it was the first idolatry, but the first relating to the deifying or apotheosis of the dead, to honour the memory of some illustrious person, or such as were inventors of useful arts,—men of extraordinary ingenuity,—also conquerors, and captains, for

¹ Rom., i., 21, &c.
fear, or love; and such godlike heroes, as did them good, by defending their persons and country, and enacting wholesome laws. Thus Ninus, in honour of his father, Belus, erected his statue, and made it an asylum.

But, leaving off this Velamen, they grossly made the figures of brute animals to represent the heavenly bodies and constellations. Not that the wiser amongst them really believed any such peculiar or divine virtue to reside in those representations, but as intimating the several attributes, effects, and powers of one Deity, under various names. For, not knowing what God’s proper name was, they invoked Him by innumerable names. Still, the Magna Mater, or Terra, was esteemed mother of all the rest, for her plenty and exuberance. Nay, Serapis’s oracle to a Cyprian king declared himself to be the universe itself; that the stellated canopy was his head, the sea his belly, the earth his body, and the sun his eye. So that under the names of Ceres, Liber, Janus, Vulcan, Minerva, &c., they celebrated the justice, liberality, and knowledge of several useful arts and profitable inventions, which they were famous for. We have the mention of some of them in Holy Scripture, for the invention of tents, minerals, and

1 August. De Civit. Dei, 1. 1. Amongst these was Saturn of the Phenicians; Astarte, who was worshipped in the planet Venus, Osiris, and sometimes a Phoenix, in the sun. Isis, and sometimes Apis, in the moon. For Mercury, Sirius, Noah in Janus, &c.
2 O hominum Divûmque æterna Creatrix. Statius. Thebaid.
works in iron, without which metal no other work could well be done; culture of ground, and husbandry, and the first mention of a liberal science, music, which, comprehending number and proportion, is of large extent. And these before the Flood. Thus Horace to Augustus,\(^1\)

\[
\text{Romulus, et Liber Pater, et cum Castore Pollux}
\]
\[
\text{Post ingentia facta, Deorum in templa recepti.}
\]

To these add such as had skill in simples, drugs, and the \textit{Materia Medica}; inventors of letters and hieroglyphics, astrology, and navigation. And because no art almost but uses fire and water, they worshipped Tubal-Cain or Vulcan, Neptune or Noah, &c., communicated, it is probable, with their religious rites, by the Egyptians to the Persians, Indians, Greeks; who had all from the Egyptians (however arrogating all these things to themselves) and the Romans, one after another.

\[\text{SECTION II. IMAGE WORSHIP.}\]

Now, as to images, in these early times, it is possible that idolatry was more ancient than even the worship of images themselves; which, some think, came not in till the deifying of dead men. For the Romans (as appears by Varro) were a hundred and seventy years before they had any such things amongst them. So that images did rather propagate idolatry than begin it. Nay, perhaps it was before painting or sculpture itself were celebrated arts; which, I suppose, were

\(^1\) Ep., lib. ii., i. 5.
cultivated to advance and adorn it: it being so rude and bungling at first, that Pausanius tells us the Greeks did only worship great stones, made pointed at the top. Indeed, the pyramids and obelisks, as dedicated to the sun, and representing his rays, point to that *Heliolatria* we have been speaking of as so early in the world. And the learned Scaliger says, the Phenicians had the like custom of worshipping rude stones: though, perhaps, from Jacob pouring oil on the column at Bethel, as a record of the true God, who is the Rock of Ages.

To these ceremonies the Romans added chaplets and crowns of flowers, and unction also; and thus might idolatry be more ancient than imagery. But whether for that cause Adrian built so many temples, without any images, I determine not. Some thought he intended to erect in them the statue of Christ, others his own effigy, either of which would yet have made it flat idolatry. But to proceed: to whom they set up statues and built temples, they soon added altars, sacrifices, flamens, priests, vestals, and other sacred officers. Nor were their gods of the same rank and dignity. They had their select deities, or *Dii Majorum Gentium*, who had ascendancy over the rest, which the wiser heathen did not take for several gods, but for their various offices and effects. And indeed the Stoics, who held even the gods themselves to be mortals, affirmed that, when after many myriads of years they died, they went all into Jupiter. And some Platonists would have

---

1 Emendation.
2 S. Aug., De Civ. Dei, 1. iv., c. 11.
every idea a god, and, if so, every idea of sin must be so too. In a word, *tot monstra, quot Jovis nomina.*

But, besides these major deities, the Pagan theologists, affirming their inferior or lesser gods, who derived all their power from the greater, and were under their correction, had amongst them certain heroes, or consecrated souls and spirits, naturally separated from matter, whose office it was to mediate for mortals to the superior gods, and execute their orders. These had likewise both their temples, images, and altars. The greater were called Dii Superi, or Cólestes; the lesser *Dæmones,* which Plato affirms were those middle spirits, that united mortals to the immortals, by putting up their prayers. And this doctrine they had from the Magi, Zoroaster, or haply from the Thracian Orpheus, Egypt, or Phrygia. Doubtless the same with those who now-a-days rank their saints and mediators among the lower deities. For so their *Divi* and *Divae* come into the catalogue. And these Pagan Dæmons were the messengers and interpreters of the gods.

In the mean time, Hesiod seems author of the first apotheosis. He tells us, that by a consult of Jupiter, the heroes, and famous persons of old, were, after death, or translation, rather, canonized and made the guardians and patrons of mortal men, and those they left behind —whose actions and lives they constantly inspected.

1 Arnob., 7.
2 See Apuleius De Deo Soeratis. Jamblicus De Mysteriis, and instar omnium St. Augustine, De Civ. Dei, lib. 8.
Thus the Platonists also would that every man had his Custos. To these they instituted feasts, which they called Inferiæ, Parentalia, Parentationes, Novendialia, &c., and sometimes the temples and altars of their heroes were their graves and sepulchres.

But, as was said, besides deified men and women, (for by this time godheads were so cheap, and men, not having where to choose better, deified one another) there was hardly a beast, cat or dog, fowl or fish, worm or reptile, tree or plant, which the Pagans did not abuse to superstition. The rivers and floods, woods and rocks and mountains, had their dryads, nymths, satyrs, Pans, Naïades. Nilus and Ganges were worshipped by the Brachmins, fire by the Persians, as well as drought, air, and even all the elements. I say not only Jupiter, but every object they met with, (like the Indian Fetishes at this day) were, by some or other, made their God. And doubtless the ignorant sort of these infatuated souls believed them real deities. For what is it superstition cannot effect? We see it in some even at this day, who would be thought very wise and knowing. How was it else possible to conceive the Egyptians should be afraid of those grovelling plants, which they themselves planted, sowed, and cultivated in their gardens, and trod on in the fields? or of the stump of a fig-tree, or piece of an old gallows, or something molten out of a rusty kettle, cast and new hammered, a thing that might rot, be burnt, or melted again, be metamorphosed from a man to a mouse, or turned into any vessel for the vilest use, according to the artist’s fancy!
A stock or head, into whose mouth a toad might creep, and spiders weave their webs, and worms consume! They knew from what dirty pit and quarry they had been hewn and dug, and yet implored help from that, which (as the Prophet most elegantly described) could not help itself, or move out of its place, to preserve itself from burning, or a thief.\textsuperscript{1} They nailed or chained them to their stations, and yet feared them as omnipresent and almighty. Nay, they erected altars to diseases, to vicious passions, Fear, Envy, and Discord; as did both the Greeks, and those of Egypt. Of all which, see the excellent Minutius Octavius, deducing their pedigrees, several genealogies, and places of birth, burials, and epitaphs, and that even of their great Jupiter himself, father of all the rest: as well as of their impotency, and sordid vices, of which St. Augustine in his city of God.\textsuperscript{2}

Juno, who should have been the most exemplary to the rest of her sex, was spiteful and jealous. Her husband, Jupiter, an adulterer and ravisher. Hercules grew frantic and burnt himself. Fortune was inconstant. They quarrel among themselves, they fight, nay, receive wounds, and bleed. Add to this, that some of them were calamitous. Saturn is laden with chains, Apollo lost his mistress, Ceres her daughter, Isis her son, Vulcan brake his thigh.

In a word, such absurd actions, childish and foolish tricks, are recorded of them by their own wittiest poets,

\textsuperscript{1} Isaiah, xl., 19.

\textsuperscript{2} Lib. 4., c. 5, and 1. xviii., c. 13. Arnob., lib. iv.
satirists, and some great historians, as plainly betray their ridiculous worship. So as it is to be wondered how such impertinences should prevail, as they did, in the world; or that wise and sober men should countenance it, and princes be at such cost to canonize and deify such base, lewd, and infamous debauchees, with divine honours, as so many gods and goddesses.

But thus had the god of this world blinded and infatuated men’s eyes and minds, insulting over the image of the true God, to promote his own devilish worship. For though, as the apostle tells us, an idol is nothing, (namely, a thing which has no real existence) yet Satan, stepping into God’s place, and usurping what belongs to no creature whatever, especially to so vile a one, makes every act of such worship, idolatry. So as those, who sacrificed to any of these representations, sacrificed not to God, but to devils. It is possible Aaron did intend no such thing, when he set up the Golden Calf, as the worshipping it for the true God, but rather as under that similitude only, it being the figure of the cherub, which afterwards shadowed the Propitiatory. No more doubtless did Jeroboam; but merely to give the revolters a visible sign of God’s presence, as described by Ezekiel’s Vision. But this could be no excuse; the crime proceeding from their making any image whatever, to adore and worship it; though the worshipper esteem it but a senseless idol, a mere vanity.

1 Diodor. Sic., 1. i., 2, 4.
2 Levit., xvii., 7; Deut., xxxiii., 17; I. Cor., x., 19, 20, 21.
God is a jealous God, and will have none to share in an honour, which is alone due to Him, and to no other. Nor yet that all images were unlawful, but the worshipping of the true God under an image; representing Him as a creature, which corrupts the imagination, and makes the superstition endless, and the rites so abominable, as there was no vice or villany, which was not practised in some of them.¹

Add to these their ridiculous auguries, auspices, raking into the entrails of beasts, and observing the flying and chirping of birds for the event of every enterprise.

Their theatres and spectacles were always ushered in with processions of idols, displaying their banners, and crowning their figures with garlands, and the Temple-porches with fruits, festoons, and pompous shows; very much resembling what a Church does at this day imitate, which takes it ill to be charged with a gross superstition, as any of the Heathens. Let any one behold and consider the multitude of their shrines, statues, altars, pageants, temples, aspersions, bloody scourgings, and disciplines, lamps and candles at noon-day; their pompous vestments, apish and ridiculous gestures, dirges, dismal tone, and other innumerable fopperies copied from Pagan rites, and savouring more of the theatre, than of the sober and solemn and rational worship of the great God.

I cannot sufficiently, I say, wonder that the learned and knowing men of the Church of Rome should take

such pains and write such volumes to propagate these impertinences, in an age so enlightened, and to the scandal not only of all good Christians, but even of Turks and Infidels. But the craftsmen have their living from these Dianas, and these have more than one goddess—they are innumerable; interceding not only for men and women only, but for pigs and poultry; invoked, censed, vowed, and pilgrimaged too, as the Heathen did.

They had likewise nuns and vestals, who looked after the sacred fire.¹ See their office described by Dionysius Halicarnassus, and their being permitted to marry after thirty years.²

The first we read of that brought images to Rome, was the superstitious Numa, as Cadmus into Greece. Varro confesses cities were before them, but, after that, so apprehensive were they of not having enough, that the statues of them were almost as many as of men. And lest the Greeks might disoblige some of the number through ignorance, the Athenians, we read, erected an altar to the God Unknown.

That they worshipped evil spirits in all this, many of themselves confess; and the Greeks called them Caco daemones, the Persians Arimanes, and the Vejoves, and Averruncans of the Latins.³ And, therefore, their

¹ Alex. ab Alexan., 1. 5., c. 12; Plutarch in Camillo. Strabo., 1. 6.
² The difference between these and the Christian virgins, see elegantly described by S. Ambrose in his answer to Symmachus, who wrote in their behalf to Valentinian and Theodosius.
oracles were no other than certain impure spirits, who, having been precipitated from their own glorious station into the darker regions, for their insolence, giving themselves to desperate malice, and the perdition of seduced man, sought, it is likely, to alleviate their calamitous condition, by bringing others into the same condemnation; suggesting whatever might contribute to it, by all possible allurements. For this effect, he who had before made use of the subtle serpent to seduce our first parents, makes use of images and idols now, to pervert their posterity. In these he sometimes uttered dubious responses; and, sometimes, as he endeavoured to tempt our blessed Saviour by texts of Scripture, and the undoubted oracles, so he now and then, to purchase reputation, spake truth, but such as mostly tended to mislead his devotees. And these were managed by crafty priests and priestesses, charms and enthusiasms, raising and kindling passions, diabolical lusts, and abominable actions. The Python lurking sometimes in the images themselves, and not seldom in his ministers.

Of these most renowned was the Delphic oracle, yet doubtful, uncertain, and for the most part so utterly false in his predictions, that \textit{\AE}nomanus, a famous philosopher and votary of their own, had written an express volume of their forgeries and impostures. And though they had been compelled to confess they were but devils, and no gods, which, as the light of a better religion arose, ceased and were put to silence; yet wizards and soothsayers undertook the trade, abusing credulous people, as yet they continue to do among the
blinded pagans, where the sun of righteousness has not yet appeared. Plainly St. Augustine tells them that devils possessed their idols. And Leon, the Egyptian Archflamen, confessed as much in private to Alexander Magnus long before. Nor with less ingenuity Porphyry himself that their responses were in his time not only full of mistakes, but subject to lying.

In the mean time, never did Satan more discover the depth of his malice than by his pretended oracles, to which deluded men came from the farthest parts of the world. They frequently, as we noted, spake of the sublimest matters, wrapped up in mysterious expressions; and, to gain authority and reputation, would sometimes command the fear and love of the Deity, duty to parents, acts of justice, and the like.

It was not then by the powers or blessings of their gods, but (as the impostor Mahomet) by their sword, barbarous sacrilege, and villanies, from the first foundation of their empire, that they conquered the world. Romulus laid the first stone of their city’s walls in the blood of his own brother, and peopled it by a rape. All their riches and grandeur were but the product of their insatiable avarice, unjust invasions, and ambition. For

1 S. Aug. De Civ. Dei, l. 8, c. 23.

2 As to their predictions, people did not so much take notice of things, which did not come to pass, as of what succeeded, though they were as false, and seldom as their miracles. Consult Lactantius, comparing their pretended feats with what jugglers and hocus-pocuses performed, surpassing all the tricks of their Serapis, yea, and even of their Accius Navius, and Claudia.
how could just Gods consent to aid and help them, whom they captived and dragged in chains after their triumph and chariots! But, granting that they sometimes were permitted to do a strange and unusual thing, for the further hardening and punition of their abominable idolatries and superstition, it was but just in God so to punish this stupid or affected ignorance, since they could not but condemn themselves, had they made use of that reason which distinguished them from beasts.¹

SECTION III. PAGAN PHILOSOPHY.

Let us now then enquire what the philosophers’ and wiser heathens’ religion was, and what they further thought of all this folly. It is confessed, that there are many things in Plato, Seneca, Epictetus, and others, which some would reduce to rules of life, nay, beyond morality, even to principles of our Christian faith; as particularly concerning the Holy Trinity. But this was all tradition, derived from Pythagoras, by the familiarity he had with deceiving spirits, seeking to refine the Gentile idolatry and superstition into a more subtle way of adoring the Devil. And this being imitated by Simon Magus, Apollonius Thyaneus, and such impostors, produced that adoration of angels

¹ It is evident that neither Aristotle, Epicurus, Cicero, Seneca, nor any of the thinking sort (unless either to amuse the vulgar, or for political respects) believed what they professed. Cicero, treating of the nature of the gods, sufficiently shows the vanity of their numbers.
which the Scripture so often condemns. And hence we shall find that even those excellent things, which the wiser Greeks and Romans have written of, our duty to God and men, proceeded from their being instructed, as best might serve the craft and purposes of Satan, to detain them in their other errors; the rest of what they published and taught being tainted with such positions and gross mistakes as cannot consist with the worship of the true God.

Let us take a short survey of the heathen sacrifices, and how nearly they imitated the Mosaical rites, that so the subtle spirit might draw away the people of God, under a show of no less sanctity and devotion.

No sooner had the priest led the victim to the altar, but he took hold of the stone, and, standing, prayed first to Janus and Vesta, who were still the principal numens in these rites, to make way for the higher powers. Then was Jupiter called on with the rest. Then, lest anything should be omitted, there attended certain custodes, or monitors, who imposed silence to the company, and pipes were sounded, lest anything that was indecent, or of ill abode, might be heard. The priest now begins the immolation, which was either some fruit, or a lump of meal, sprinkled with salt, and some grains of incense, which was laid on the head of the beast. After this, was poured wine out of an ewer. This they called delibation, and never omitted, first sprinkling, then casting it into the fire. This done, the

1 Col., ii., 8. 23.  
2 Val. Max., I. i., c. 1.  
3 Panvinius De Fastis, and in 2 de Repub.
priest commands the victims, and other officers attending, to knock down and cut the throat of the creature; receiving the blood into vessels. Then they flayed off the skin, washed the flesh, and laid the fire in order. After this, the aruspex flamen and priest, raking the entrails, to see if anything were defective or redundant there. A portion of every member being cut off for prelibation, and rolled in flour, was burnt; which being consumed, the priests ate the rest with their jolly companions dancing about, and singing the praises of their gods to the noise of cymbals and other fantastic instruments.

Now, how these ceremonies answered the Levitical may be gathered from the ritual chapters of the Pentateuch.1 Here we see how Satan, aping the Deity, did strive to imitate the prescribed sacrifices. So were they taught that the Divine justice was not to be appeased without the shedding of blood, prayers, and prostrations; erring only in the application to a false object, and mixing their devotions with unwarrantable rites and fancies of their own.

They farther held that, for the sin of man, man was to die. Hence Caesar tells us the Gauls sacrificed their children, as those of Africa a Man to Saturn, after a more cruel manner. And so, of later times, what we read of Montezuma's idol in Mexico. Not that the wicked spirit induced his votaries to this unnatural superstition, in relation to the sacrifice of Christ, but, as we said, that he might place himself in his Father's

1 Numbers, xv., xxviii. Deut., xxxii., &c.
thron, for which he was thrown down to Hell. For, as to this, or any other sort of sacrifice, did we well contemplate the idea of God, one could not easily be persuaded that the blood of beasts should reconcile us to His favour, or even that He had commanded such a service, till the Christian religion drew the curtains, and showed the reason of its typifying the offering of that Immaculate Lamb, who takes away the sins of the world.

In the mean time, it is the opinion of St. August- tine 1 that, since Almighty God would be honoured by sacrifice, He would have a sacrifice worthy of Him, and therefore of the most worthy of his creatures, man. That even in Paradise itself, as a Divine worship, so a sacrifice; namely, man himself, in innocence, offered himself,—that is, was ready and willing to have done it, as thinking nothing too precious for his Benefactor. But, after the Fall, there was no man worthy to be offered to him; but man himself stood in need of a pure victim, that might be sacrificed for him, and reconcile His justice. And, indeed, all the Jewish rites and ceremonies were but a continual prophecy of that which was afterwards to be done in the church; 2 and, therefore, were there so many sacrifices enjoined them, which signified only that Lamb of God, the great and pure oblation without spot.

To show what other adumbrations, or rather glimmerings, the heathen world had of the truth, in the midst of

1 De Civ. Dei, l. x., c. 29.
2 As we shall hereafter show, chapter xii.
so much error, is it not admirable to hear them discoursing of the depravedness of the human nature, the shame and misery of its condition? That man, contrary to all other creatures, had rather be covered with the skins and spoils of beasts, than expose his own nakedness! That the soul had once wings from Heaven, but had broken them!

The Orphian verses mention two Tables of a Decalogue; though, indeed, the two first commands of the first, and last of the second, were not known to them. To this add the wide spreading of circumcision, and opinion of the world's conflagration, to precede its inundation. That which Justin mentions of the Exodus of the Israelites out of Egypt,—Solinus, Diodorus, and others, of the destruction of Sodom, and several other Scripture passages,—their reverence to a kind of sabbath, or number seven. Our learned Andrews shows how all their best and most rational ceremonies flowed from the people of God; whilst tapers at noon-day, and funeral obsequies, and worship of idols, were pagan customs; and even temples themselves were but sepulchres, whither people used to assemble, to call upon the memory of the dead. So the pontificate came to be translated from emperor to pope. They used imposition of hands, as in the ordinances of Numa. Their linigeri were a kind of surplices. We have an excommunication in Virgil. Nay, they had exhorta-

1 So Plato, Trismegistus, and Hierocles, speak of the lapse of human kind, which Plotinus calls an impious rebellion.
tions and preaching in their assemblies.\(^1\) They canonized renowned persons. They had their *ambarealia*, or processions, in which they bore their images about, as prevalent for the averting of great calamities, and used the *kyrie eleison* in their Litanies.\(^2\) They observed Lents; dedicated first fruits, paid tithes to Apollo, had lustrations, holy water, and baptism. *Tingit et ipse fideles suos*, as Tertullian, speaking of the unclean spirits.

Further yet, the heathen had notices of the insupportable discord in man’s upper faculties, and lower appetites, though they comprehended not from whence it proceeded. The more refined among them abhorred immoral actions, and taught that a pure and defecate mind was the best and most agreeable sacrifice. In what raptures of devotion they expressed themselves, Simplicius\(^3\) has given a specimen.\(^4\)

Thus God left not Himself in any age without testimony, nor man without a law, written in his heart, besides what he might every day have read in the Book of Nature. And, accordingly, some of them by this alone, and by observing the miseries their own depravity brought them to, taught and lived excellently;

\(^1\) See Valerius Maximus and Suetonius, who makes it a wonder that Tiberius Cæsar should offer sacrifice without it.

\(^2\) Arrian.

\(^3\) Com. in Epict.

\(^4\) Plato (in Rep.) says that the proof of a virtuous and just man appears in his sufferings—not merely being reviled, and stripped of all, but gibbeted and murdered ignominiously; and that such would be happy hereafter.

\(y\ 2\)
and had, as we all along have showed, profound and glorious notions of the Deity. But, having all this by guess, or as fragments collected from the Hebrews, or patriarchal saints (amongst whom it is not unlikely they might converse as well before as after their descent into Egypt) they never had, or could have, any certainty of what they so took up. Nor did this arrive at any uniformity, or institution of established principles and worship; though Jamblicus has called it so, with the epithet of divine, pretending to revelation, where he says, "We know nothing of ourselves;" whilst he knew not when, or whence, neither agreeing in time, place, or testimony. They groped still in the dark, but could not find it by any light they had from above. And even Aristotle, Cicero, Seneca, and others of their most penetrating philosophers, lost themselves when they spake of another world. And though they held future rewards, punishments, and receptacles of immortality (if we may believe their books, deriding the follies of the vulgar), and certainly went as far into the search of truth as human nature, wit, and industry, are capable of, unassisted by revelation, and immediate light from Heaven; yet they did sacrifice with the people, and mingled in all their superstitions. The

1 See the admirable piece of Tully in his Offices, Tuseulans, and other grave discourses; with what Seneca, Plutarch, Xenophon, Plato, Epictetus, Antoninus, Maximus Tyrius, and other of the heathen have left behind, to condemn the more enlightened world who believe less, and live worse, than heathens. Of all which, Eusebius de Præp. Evang.
strictest sects among them, and even Socrates himself, used to be intemperately angry. Cato would be drunk at night: Seneca was extremely covetous: and some used secret and abominable lusts. War, force, and blood, were the effects of the much celebrated constitution among the Lacedemonians. They punished single murders, but desolated whole countries with the sword. And Aristotle asserts the lawfulness of killing barbarians. Rome itself came to its grandeur by bloodshed and rapine, unjust and causeless wars, as against Cyprus and Sardinia, by their own confession. Revenge they esteemed a virtue, and fed themselves with the fights of gladiators, cutting and mangling one another with the greatest cruelty, as a most delightful spectacle. The same notions among the Egyptians and Spartans permitted and encouraged thefts; and the Romans grew so great by it, that Cicero confesses, should they have restored what they wrongfully got, their state must return to their ruder cottages again.

The disputes they had about the *sumnum bonum*, the end and object they aspired to, Varro tells us amounted to no less than three hundred controversies; some placing it in the sensual pleasures of the present life, as the Epicureans; others in a sullen and feigned indolency, as Zeno and the stoics, which even stocks and stones may, after a sort, be said to enjoy as well as they. Others placed it in the knowledge of natural causes, contemplation, and polity, as the peripatetics; or, as Plato, in the union and conjunction with the Deity, without any terrene adherence. Nor, indeed, was it
Plato's alone; but even Aristotle himself, as he grew older and wiser, acknowledges, as we read he did, that God was the beginning, middle, and end of all—the alpha and omega.

Thus, some among the Gentiles came so near the truth, as it cannot be denied they served the True God in such virtuous lives, that our Blessed Lord tells his disciples, he found not greater faith, no, not in Israel. Such was the devout Cornelius, and another centurion; and the more honest stoics and Platonists. Nor this by chance or constitution only, but by cultivating such principles as produced in them virtuous habits and actions; in imitation of those perfections, which, by the light of nature, they acknowledge to be in the God of Nature. The Prince of the Peripatetics tells us the supreme good consisted in an active life, conforming to the rules of virtue. And it is affirmed, that his last words were an option that the *causa causarum* would have mercy on him; so as some divines of great note have conceived great hopes of the salvation of this learned philosopher, besides many others.\(^1\) And though other less charitable reckoned all heroical virtues, without an actual sanctifying grace, but as *splendida peccata* (for so St. Augustine calls them); yet have divers, before this father, thought otherwise. God's especial grace co-operating with the light of nature, by which they might possibly be conducted to those virtues and

\(^1\) Zuinglius and the knowing Erasmus were of that opinion. The learned Junius extends the salvation of Christ even to heathen infants. See his Treatise de Naturâ et Gratiâ.
good things, which were illustrious in them. Of this number, doubtless, we may count Job, Rahab, Ruth, &c., who were Gentiles. Nor do we find that God did wholly confine His gifts and favours to one people absolutely, or that He might not inwardly sanctify them, even at the last period. For as to that\(^1\) of St. Peter, of there being no other name under Heaven given to men whereby they might be saved than that of Christ, it was spoken in relation to the times of the gospel, when our Blessed Lord, having broken down the partition-wall, the Gentiles were freely admitted;\(^2\) and the gospel, being afterwards universally promulgated, the case was altered, and the very Jews, as well as heathen and Gentiles, left without excuse; God no longer winking at their former blindness and obstinacy, but expressly commanding men every where now to repent, as St. Paul tells the Athenians.\(^3\)

Besides, whoever among the more religious Gentiles did attain this grace, we are to understand it as an emanation of the merits of Christ; though those who received it might not so clearly comprehend from whom, nor why: as neither do infants, the unbaptized, nor idiots. It is evident that the Jews and all the world were, about this time of our Blessed Saviour's coming into the world, so monstrously wicked, malicious, ungrateful, and universally perverted, that they had, doubtless, been swept away with some universal calamity, had not the Holy Jesus come at this fulness of time, when they were so ripe for destruction, to make

propitiation; and by His doctrine, example, and miracles, reform the depraved age. Add to this the Gentiles, as well as others, lying under an obligation of using certain means. Some of them were pious and devout persons, full of love to God; and it is hard to judge that any such should perish for the sin of Adam merely, or their not being exactly conformable to the first law; but for refusing or abusing some mercy purchased by Christ. It is, however, certain that the grace of Christ is absolutely necessary to repentance and sanctity, whatever the necessity of the knowledge of His incarnation, and other mysteries of His institution be.

Nor all this while was the merciful God wanting, I say, even to the farthest heathen world; so as to keep from them the knowledge of doing as much as He expected from them in their present state;¹ and as to the rendering them capable of some inferior strictures and degrees of happiness to come. Since to whom little is given, of them little will be required.²

They had all the laws of Nature written in their hearts, though they could not guess at the method God used, to bring them to the true religion. And that the Pagan world had these assistances, Tertullian proves out of their own confessions; so that most who perished might accuse their own wilfulness. They had, besides, no obscure hints from the sybils' prophesying, in divers places, among the heathen; if, at least, there were such

early glimmerings; though, I confess, few of the ancient philosophers had seen their writings, so carefully reserved by the Romans in the archives of the capital, as Lactantius tells us.¹

CONCLUSION.

We have showed how infirm the religion of the heathen was, and how far short it came of perfection; supported, as best it was, by Pythagoras and his followers: neither did any other sect attain to any solid truth beyond conjecture. They who thought they came nearest, held that God, or some sublime being, which they called the mind, pervaded all the parts of matter, as the soul the body,—and so made the universe a kind of rational animal. By this philosopher, every fly and insect must be divine, as they were parts of matter. Some of them were so senseless as to think the fortuitous motion of senseless matter should proceed to a habit of acting so wisely and regularly as to produce this goodly system.

That man is no other than a dismal, forlorn creature, composed of the same nonsense matter, without providence,—and that there was nothing framed for use, but as things and consequences happened;—that the plastic nature, or soul of the world, or (as Parmenides calls it) Love, as a secondary created Deity, before whose production necessity reigned,—that is, in better

¹ L. i., c. 6.
theology, before the Spirit of God moved on the chaos, and educed this orderly system,—unguided by any order or providence necessitated that motion of matter which produced the world.

Nor was the crime of Socrates, as it is commonly reported, his asserting the unity of the Deity (for he held all the constellations to be gods), but for reproaching his countrymen for making them authors of such prodigious lusts, intemperance, parricide, and other abominable actions. There was, in truth, nothing almost in nature which they did not ascribe Divine power to; no, not so much as a wish or imagination; so far had wild and endless superstition prevailed upon mankind. Thus, Symmachus took mighty pains and made orations to have persuaded that excellent emperor, Theodosius, to erect a pompous altar to Victory—using this for argument, that none should refuse to worship what he wished for.

Thus, it has abundantly been shown how far remote they were from any satisfactory and settled opinions, either about God, or the world. And, consequently, their religion was the same. Nor find we any of the most zealous abettors of the Orphean and Gentile philology, Porphyry, Hierocles, Celsus, and the rest, who could produce any valid reply to Origen, Justin Martyr, Arnobius, Minutius, and those other Christian apologists who contended with them.

As for Julian, his fantastic singularities were out of monstrous pride and opinion of his own pedantic learning; being, at last, become so very insupportably inso-
lent, as to fancy himself the great Alexander, by a transmigration of that hero's soul into him.

Celsus was an Epicurean atheist, and it angered him to the heart there should appear a doctrine which should overthrow the security of being exempt from all impunity after a flagitious life. Whilst, after all, I find not one of them who either did or could deny the miracles ascribed to our Blessed Saviour, or that there was such a person. But, whenever they were pinched upon those undeniable matters of fact, they said it was his skill in magic, and I know not what.

To conclude—The religion of the Gentiles was, as we have showed, either taught or framed to voluptuousness, flattery, uncleanness, cruelty, poetic fictions, to fear and passion, ambition, pride, pomp, and vainglory, and to support their tyranny (for which men, whose breath is in their nostrils, would be reputed gods), or to curiosity, vain philosophy, and gnosticism. Speculative men were fond of their opinions; and politicians had secular ends to serve, as well as the crafty and avaricious priests, who governed the ignorant, managed the oracles, and abused them all. And though something they did to advance morality, it was but amongst the few, and but for human, variable, and vain-glorious ends. This we find in the best of them—Cicero, Seneca, Plutarch, full of excellent precepts and documents as they are; yet betraying self-conceit, praise, and affectation. Plato, who approached nearest to the truth, durst communicate his sentiments to a few only of his intimates; and Socrates, dying, knew not whi-
ther he went. The most sublime of Epictetus's religious discourses tend only to render their wise man consummate in the moral virtues, to which yet the most perfect of them could not attain.

Besides, the very best of these sapient men pretended no virtue from their gods, who were proved to be more wicked than men. And, therefore, had recourse to Virtue, which they celebrated not as a goddess, but for her own self. This was still but a kind of idolatry; seeing God being the only great and sublime principle of our duty and obligation, real virtue is not communicable, but as it relates to His perfections and commands alone,—and not for the sake of any other whatsoever. With all this, the Gentile religion had little or no inspection into the heart, nor took cognizance of thoughts, speculative lusts, and other crimes, which they did not put into the catalogue of sins. Nor esteemed they humility a virtue; vain-glory and the praise of men was the utmost end of all their labour, as Cicero ingenuously confesses.¹ And so, Aristotle places all felicity in the perfections of the mind and body, but this only as it respects man in his present state. And were it true, yet were it not obtainable here, since there is no single person who could possibly expect such an entire union of all just perfections in himself, as are not to be found in all men altogether. They prayed the gods for health of their bodies, but not to better their minds, and make them virtuous: that they affirmed that they could do of themselves, without him.

¹ Pro Archia Poetâ.
As to the stoical happy man upon the rack, and in Phalaris's bull, with all his exalted virtue, what more ridiculous? Heaven and Hell by this are made the same indolency and stupid senselessness with cruciating pain: but, who can dwell with everlasting burnings? Verily, the notion is quite against humanity, since the union of the natural good is absolutely requisite to the moral; but the knowledge of this is, as we have shown, clouded with doubts. Epicurus' sensual pleasure was exploded, as relating only to this present life, and what is so can neither be true felicity nor true religion. It is, therefore, no longer strange, that so many wise and learned philosophers, with all their deep speculations and reasonings, could not lead one city to the knowledge of the true God; or so much as gather a few disciples to embrace and practise the virtues which they taught. Plotinus, with all the favour of the empire (Galienus and his empress having a project of founding a Platopolis, where all the laws of that philosopher should be taught and professed), could never effect what yet our blessed Lord did, not only without all human aid and assistance, but against the greatest contradictions, discouragement, and opposition imaginable, both of learned and unlearned adversaries,—men and devils,—establishing His holy religion in so short a time, with such mean and unlikely instruments; and so universally, as all those great geniuses, with all their pretences to virtue, could never accomplish. So great is the truth, and it will prevail.

Thus was philosophy, the religion of the wiser
Gentiles, as the law of the Decalogue to the Jews. But God's law had been sufficient to render both happy; nor would their precepts, we see, with all their acquired learning, lead them to the perfection and sovereign good, which they so earnestly sought. We do not yet, as we have said, pronounce peremptorily concerning the absolute evil state of those who amongst them endeavoured to live up to the principles of the moral virtues; it being certain it will be more tolerable for Sodom and Gomorrah; much more for those honest heathen, than for wicked and dissolute Christians. Besides, we find not that all, even under the Mosaic dispensation, had faith in the death and merits of Christ for the remission of sins. The disciples of our blessed Lord themselves had none, till after His resurrection from the dead. The Jews themselves, rigid as they were, had charitable thoughts of the proselytes of the gate, and those who observed the seven precepts of the sons of Noah. And, above all, the gracious God has ways and methods of salvation that we know not of, and which are past finding out. Add to this, that there was very little concerning the attributes of God, His creation, government of the world, &c., contained now in the Old Testament, believed by Abraham and the patriarchs, but what we have shown to have been owned and acknowledged by the virtuous and learned Gentiles. Nor is there any excellency in whatever the Greeks, Romans, and other nations, wits and philosophers, have written, but what is contained and infinitely refined and improved in the Christian doctrine.
In all events, God is just and infinitely good to all; and the merits of Christ of as infinite extent, and His mercies over all His works. How deficient the heathen were in all the parts of the true worship,—how full of superstition and idolatry, pride and vanity, and inconstancy, this chapter has sufficiently declared. Whereas, the true religion is ever the same, invariable, and like itself in every part,—speaks only of God,—regards nothing but God,—receives all from God alone, attributes all to God, namely, body, soul, words, yea, even our thoughts, actions, passions, yea, life itself; all its revelations tending only to His glory.

Moreover, the true religion does not flatter, is not sensual, but curbs and contradicts our vicious and most endeared appetites and inclinations,—roots up injustice, avarice, pride, and passion, and the rest of our corruptions,—does not nourish vain curiosity, polity, or worldly craft,—but, being pure and simple, loves and embraces virtue for the love of God.

The books and oracles that teach us the true religion, in a long and ample consequence of holy authors, writing and living in such distance of time, yet leave us no trace of human passion or interest, but such as breathe of piety and all the evangelical graces: and yet, speaking with the highest authority and assurance, have no end but the glory of God. Their writings are not affected, nor set off, and refined with rhetorical flourishes,—her rites are not pompous, nor service theatrical, to allure; but simple, vulgar, and adapted to the meanest capacity, in things of most necessary con-
cern; and yet none more sublime, none more grave and majestical.

Now, since it was not possible the heathen, learned as they were, yet blinded by such gross superstition, should ever have emerged out of those prejudices, without some brighter light than that of mere nature,—without some supernatural means,—Almighty God, who would not altogether abandon His poor creatures to Satan's implacable malice, as appears by His continued kindnesses, to glorify the riches of His grace, and lest the world should be totally corrupted, and for the accomplishment of His own most wise and eternal purpose, was pleased to reveal His mind, show us the way to the true and sovereign good, by giving the world a more clear and bright idea of Himself, with rules by which to govern ourselves in all capacities, and in doctrine, agreeable to the dictates of reason, and the dignity of our nature. And this doctrine He has confirmed by miracles, and other convincing circumstances, as we are now come to show in the following chapter.

That we have mentioned little of the Gentiles of this day, spread over divers parts of the known, and universally over the unknown world, has been, for that we find hardly any of their superstitions and opinions of the Deity more extravagant than that of the ancient pagans; all alike irrational and inconsistent with the worship of the true God. The Mahometan Impostor has mixed divers Christian tenets with the Jew and Gentile; and though worshipping but one God, yet the
laws of that religion are a rhapsody of egregious nonsense—that of the Brachmins, in Persia and Mogul country, fragments of the ancient Pythagorean. The rest are purely Gentile, or, more plainly, barbarous,—even the most civilized among them, as the Chinese, Incas of Peru, and some other. And of the merely *Ethnic*, their religions are so various and extravagant that, not being worthy the consideration of rational men, we have not thought it necessary to enlarge upon them. Such we reckon the savages of Brazil, and other parts of America, Samojetia, Indian, Japonian, Siamese, inward Africa, Arabia, &c. Only it is observable, that most religions believed that suffering and difficulties were necessary to obtain happiness. Witness the chains, uneasy postures, cruel sacrifices, fasts, severe lives of the Indians, Turks, &c.,—lancings, burnings, pulling out of their own eyes, on sight of Mecca!—How gentle the Christian religion, which teaches only to bear afflictions when sent us! Not to force them on ourselves, unless such as are useful as medicines and remedies to keep exorbitances under, our sabbaths spiritual, and the like. *Veritatem religio quaerit.*

To conclude with the Collect for Good Friday:

"Oh, merciful God, who hast made all men, and hatest nothing that Thou hast made, nor wouldest the

SECTION IV. 1. INTERPRETATION OF SCRIPTURE.
2. RULE OF FAITH.

SECTION I.¹

If there be a God, a world created by Him, rational creatures, and souls immortal in it; an all-disposing

Providence that governs; if there be a future state after this life, an account to be given how men have behaved themselves in the present state; if there be rewards to the good, and punishments for the wicked, and that to this great God is due religious worship, and among the many pretences to this worship, but one true and acceptable way, the next thing to be enquired after, is by whom, where, and how, we may come to the certain knowledge of it. In a word, to know how this God will be served, and what that law and those commands are, which His creature is to observe and obey, as a rule to walk by, and his real interest so to do.

Now, natural religion, as we have shown, teaching us that there is a God, who is a just, holy, eternal, wise, and Omnipotent Being, that after this short race of ours there is a life to come, where all our actions will be severely examined, and rewards accordingly distributed, nay, that the whole mass of mankind being depraved and indisposed to the end, for which, as rational creatures, we were put into the world; namely, to glorify God by our conformity to His perfections, as the Supreme and Sovereign God, but which Nature only so depraved cannot lead us to, it follows, that there is then a further supernatural religion, and revelation necessary, whereby we may come to the knowledge of the Divine pleasure: and how, by guiding and governing our actions, we may arrive nearer that original rectitude, and, consequently, nearer to that happy and desirable condition and Sovereign Good we aspire to.
Now that is the only true and supernatural religion, which is able to work in our natures such graces as qualify us for that blessed state. And to find out this has ever been, and yet is, the grand inquiry, and controversy of the world. Though, in the mean time, so infinitely merciful has the Creator been to His creature, that, as Moses tells the Israelites, this word and will of His is neither hid, nor far from any of us; not in Heaven, that we should say, Who shall go up thither, to bring it down to us, that we may hear and do it? Neither is it beyond the sea, that we should say, Who shall go over the sea for us, and bring it unto us? But the Word is very nigh unto us, even in our mouth and heart. To the same effect St. Paul speaking, not of the law (as did Moses) which concerned the Jews only, but of the righteousness of faith, or religion, which the Apostles preached; and is that word of life, that Divine revelation, which is not repugnant to the light of Nature, but which perfects and supplies its defects: since though by that alone we may come to the knowledge that there is a God, and therefore to be worshipped, yet does it not teach us how, and in what manner, He is to be adored and served; which only the Scriptures do.

It is then our great concern seriously to examine the truth of those Divine records, and accurately to search them; seeing in them it is we hope to have eternal life: these are they which testify of God, as dictated alone by the Spirit of God; and therefore, lest we should be imposed on, by believing pretended spirits,

1 Deut., xxx., 11, 12, 13, 14.  2 Rom., x., 6, 7.
we are to try the spirits, whether they be of God. For (as St. John\textsuperscript{1} has warned us) there are many deceivers gone out into the world, such false Apostles,\textsuperscript{2} and deceitful workers, and other impostors; whereas, if an angel from Heaven itself should teach any other religion than what the Scriptures teach, so far from being received or hearkened to, he is to be accursed.\textsuperscript{3}

I. SCRIPTURES.

By the Scripture we understand those Sacred Volumes, which contain those lively oracles, immediately received from God, the great Legislator; containing the several treaties and contracts that have been made between God and man; and teach the true principles of that faith and supernatural religion which leads to eternal happiness. The Scriptures, I say, are those writings which declare the whole will of God and the mysteries of salvation.\textsuperscript{4}

It is called the \textit{Word of God}, because they were first spoken by Him; and \textit{Scriptures}, as being written by those who heard it. Nor this by the will and contrivance of man, cunningly devised for secular purposes and worldly interest, but as holy men spake and writ what they heard, or as was agreeable to what they heard, or as moved and inspired by the Holy Ghost.\textsuperscript{5}

For God, who at sundry times and in divers places, speaking in times past unto the Fathers by the Pro-

\begin{itemize}
  \item \textsuperscript{1} I. John, iv., 1.
  \item \textsuperscript{2} S. Matt., xxiv., 11-15; II. Cor., xi., 13.
  \item \textsuperscript{3} Gal., i., 8.
  \item \textsuperscript{4} I. Tim., iii., 16.
  \item \textsuperscript{5} II. Pet., i., 16-21; II. Tim., iii., 16.
\end{itemize}
phets, has in these latter times spoken unto us by His Son.  

Hence we learn

2. Who is the Author of them, namely, the Eternal God, by Him whom He hath appointed heir of all things, by whom also He (that is, God the Father) made the worlds.  

Who is the brightness of His glory, the express image of His person, upholding all things by the word of His power.  

And what this Author spake has been confirmed by those who heard him, namely:

3. The Holy Penmen.  

To these God also bore witness, both with signs and wonders, and with divers miracles and gifts of the Holy Ghost, according to His own will. By these various manners may safely be understood the ministry of holy angels, the prophets, voices, urim and thummim, dreams, visions, and the like. These were the means by which it pleased God to reveal His mind; especially after the time of Moses, who is said to hear God speak face to face that is familiarly not in dreams, or by other mediation; since, before this, the long-lived patriarchs might not only receive the oracles of God by tradition from their ancestors, and so had no need of committing them to writing. But, when men's lives were abbreviated for their passing them so wickedly; and, consequently, their memory impaired, and generations spread and separated, and that governors and governments

1 Heb., i., 1; Luke, i., 70.  
2 Heb., i., 1-4.  
3 Ἀγγειογράφοι.  
4 Exod., xxxiii., 11; Num., vii., 89; xii. 8.
were changed, which must needs corrupt former tradition, and likewise to prevent the impostures of atheists and heretics, it pleased God to order, that both the history of the creation, church, and laws, should be committed to writing. Some of it, namely, the Decalogue, He wrote with His own finger upon tables of stone; then by the Hagiographi, Moses, and the Prophets; and, lastly, by the Theodidacti, the Apostles, and Evangelists, from the mouth of Christ Himself, and the inspiration and impulse of His Holy Spirit. For that it should be from any other; or, that the doctrine contained in the Sacred Volumes was propagated upon the score of any secular interest of the penmen, (whatever opportunities they may have had to do it) will be sufficiently disproved if we consider the persons and characters of even the greatest and most conspicuous of them, Moses, Samuel, Elias, Jeremiah, and the rest, of whom we read in the Old Testament. The first from an adopted prince, reputed son of Pharaoh's daughter, educated in that great court, abandons it all, choosing rather to suffer affliction with the people of God, than to enjoy the pleasure of sin for a season.¹ What his troubles and difficulties were, to manage the charge God had imposed on him, among a stiff-necked and most perverse people, we may read at large in the histories of Exodus, Numbers, &c. Samuel had likewise to deal with the same discontented nation. Isaiah, Jeremiah, Ezekiel, and most of the rest, after all the difficulties they went through for warning the princes

¹ Heb., xi., 24, 25, 26.
and people of their sins, were either persecuted, imprisoned, or murdered. And then for the penmen of the New Testament, the Holy Apostles and Evangelists, we find not above one of them all who came to a natural death. And (to use the words of the author to the Hebrews) others had trial of cruel mockings, and scourgings, yea, moreover, of bonds and imprisonments; they were stoned, they were sawn in sunder, were tempted, were slain with the sword; they wandered about in sheepskins and goatskins, being destitute, afflicted, tormented.¹ And those, of whom the world was not worthy for their exemplary virtue and piety, St. Paul tells us, in another place, were counted as the filth and offscouring of the world, suffered the loss of all things, in stripes, tumults, labours, watchings, fastings.²

And, indeed, both for their callings, as well as persons, they were most of them poor herdsmen, or ignorant fishermen; and who were to teach and profess a religion, which they were sure was so little advantageous to their worldly interest, that (as was foretold them) it would not only expose them to the loss of the little they had, but of their lives, and all that could be dear to them in this world. In short, they were counted so many madmen, that in such circumstances (for besides this they were very illiterate and simple, many of them) they should hope to plant a religion, which spake of nothing but suffering, contempt, and

¹ Heb., xi., 36, 37, 38.
² I. Cor., iv., 10-13; II. Cor., xi., 23-33.
scorn, that should prevail over a voluptuous and abandoned age. But thus they preached through countries, cities, courts, not sparing kings themselves.

What impostor could write such a book? What a madness were it to imagine that the most admirable writings, and designed to persuade to the love of God and our neighbours, to inspire zeal and goodness, should be supported by impostors, without any design of interest to the authors! Consider we, then, that all they writ savoured of the greatest innocency and candour imaginable, breathing of piety, zeal, and holiness; dissembling nothing, but confessing and recording even their own faults and weaknesses, with all their lessening circumstances; and distinguishing the dictates of their own reasonings from that of the sacred spirit;¹ leaving several instances of their sincerity, as may be farther seen in the life of Moses, Daniel, Jeremiah, St. Paul, and others.

Besides, it seems not only very unlikely, but almost wholly impossible, that so many humble, holy, and unconcerned men, living at such distances of times and places, should universally agree to deceive both themselves and all their relations, posterity, and all ages since, for no manner of advantage, but to the manifest endangering of their own lives and liberties, had not the authors been both divinely inspired and assisted.

That they pretended no worldly consideration, is farther manifest, not only by what they suffered, while their Divine Master was conversant amongst them; but

¹ I. Cor., vii., 6.
by their persisting to propagate His doctrine, after He was departed from them: and all their hopes and expectations of earthly felicity vanished with Him, whilst they fancied it had been He who should have redeemed Israel, and restored it to its former splendour.¹ Far from this, He tells them they must look for no such matter here, but, on the contrary, that they should be scorned, plundered, enslaved, betrayed by their nearest relations, put to death and persecuted with that exceeding rage; and men should think they did God good service to kill and murder them.² For all this they desisted not preaching and publishing what they writ. What could be more ingenuous, more disinterested, with greater proof of the unparalleled sincerity of the writers, and of the truth of what they taught?

Lastly, who is it that doubts that Aristotle, Cæsar, Cicero, Livy, Plutarch, and the rest of those famous men, were authors and writers of those books which go under their names; whilst none of them can show such ample testimony as the Scriptures that they were penned by those whose titles they bear? And whether they were the works of those persons, in every paragraph, does not so nearly concern mankind as those Holy Oracles do, namely, the eternal salvation of our souls. And therefore it is they have been so diligently kept and examined. There are controversies about profane authors and books, yet of whom have we heard that would suffer martyrdom to assert them. Had any of the books of Scripture been supposititious, how comes

it that no such doubt appeared from any living in their author's time, or soon after? That two or three epistles of the New Testament raise some scruple, is an evident proof of the authenticity of all the rest. It is certain they were penned before the destruction of Jerusalem. And in all the disputes of the orthodox against the heresies of the Gnostics, Millenarians, Arians, the controversy about Easter, which so sadly divided the Church, and appeared so early, none of them yet questioned a book of Holy Scriptures; nor could any have corrupted them, but we should have heard of it by their adversaries. And, lastly, supposing mistakes of scribes, and various readings, yet so has the Providence of God conducted it that no essential part of religion is weakened by them. Yea, put case all the copies were lost, yet have we most, if not all, entirely recited by one or other of the Fathers, and critical writers, citing them upon occasion.

Thus, for the persons of the penmen. The next argument of the veracity of the Sacred Books is in prophecy.

SECTION II. THE SCRIPTURES ASSERTED TO BE THE ORACLES OF GOD.

I. BY PROPHECIES.

We do not intend by prophecy here the means whereby revealed truth has been conveyed and revealed to us:¹

¹ The learned Mr. Smith has copiously treated of this in his Discourses out of the Rabbins, in thirteen chapters.
nor mean we only what St. Peter calls *a more sure word of prophecy*;¹ but the wonderful fulfilling and accomplishment of what the Scriptures have foretold should come to pass; and which, for having punctually so happened, is another pregnant and undeniable proof of its being celestial and divine. Thus, to Adam, Abraham, Israel, and many more, was promised the Messias. Consider, too, with what consideration the divided land was prepared with laws and constitutions so many years before they entered Canaan, and then with how high a hand and what success; and what happened to Jacob’s offspring according to the predictions,²—what, also, after Moses befel them for idolatry.³ Here will come in the re-building of Jericho.⁴ The naming of Josias three hundred years before he was born.⁵ And that Cyrus should deliver captived Israel,⁶ and re-build the demolished Temple, against all appearance, at the very period of seventy years,⁷ a hundred before that prince appeared. In like manner, the famous prophecy of Daniel concerning the Persian, Greek, and Roman monarchies, with other predictions of what should happen in the later times, yet every day fulfilling. Not to insist on Hosea, Zachariah, and the rest of the minor prophets— *That the glory of the latter Temple should be greater than the former,*⁸ and fulfilled in the Messias.⁹ What action happened in our Blessed

Saviour's life on earth which was not foretold by David, Isaiah, Zacharias, Daniel, and other prophets; together with the cutting off the Gentiles, rejection of the Jewish Temple, metropolis, nation, in so stupendous a manner as to continue an execration to this very day. \(^1\) Lastly, that so many prophets should rise amongst them, till Christ, who was to be the scope and end of all that went before, should come; and not so much as one should ever since appear to give them any hope or consolation—now almost seventeen hundred years.

All which, computed and happening since the canon of the Scriptures has been finished, are irrefragable proofs of its being the word of God.

From these, we come to that of Miracles.

2. MIRACLES.

Miracles, the event of prophecies, were performed, not only by the Almighty Author, but by his ministers, penmen, and prophets. Our Blessed Lord wrought more in one year (and, I think, in one day) than did all who went before or ever since. By these such multitudes were converted, churches gathered, many years before any Scriptures were extant, as now they are; the Christian religion was asserted, and also by the sudden ceasing of Satan's oracles, and silence of his lying spirits; the conversion of whole nations to the faith,

\(^1\) Eusebius has so fully treated of those innumerable texts, through all the prophets, in his second book, "De Dem. Evang.," that there is nothing more evident.
effected without any external force of arms, eloquence, or human wisdom, but by plain words and the foolishness of preaching (as esteemed), and the most contrary means to attain anything men aim at, that can be imagined; the greatest empires were subdued; princes' sceptres made to stoop to the ignominious cross; and all the pompous Pagan rites, that had reigned so many ages, and prevailed upon the blinded world, crumbled to nothing in a moment, as it were, after our Blessed Saviour's Ascension. The little stone hewn out of the mountain without hands, the doctrine of the despised Jesus, and of a dozen poor fishermen,—suffering martyrs, and constant confessors,—without weapon, or what the world calls wit, overthrew the politics of statesmen, the subtlety of philosophers, and all the wisdom of the wise.

Consider the prodigious change this word of God, these holy books, made in the world, when it pleased Him to call the Gentiles to the knowledge of them. In all countries, in all ages, sexes, and conditions of men, it gave courage and strength to the weak and fearful; so as little children and tender virgins have braved the most exquisite tortures, rather than depart a little from the faith. It was no sooner published than it fermented like the leaven our Saviour speaks of in the lump. The seed was no sooner sown but it sprung up like corn in a hundredfold, and of a small grain, as of mustard-seed, became a tree, spreading its branches over the whole earth. It pierced, like lightning, both for swiftness and irresistible force, so as, Tertullian tells us, it en-
tered castles, cities, camps, palaces, senates, schools, and private houses, like the sunbeams, and nothing was hid from the heat thereof, its light and operation. This powerful and Divine Word healed diseases, raised the dead, enlightened the blind, cleansed the leper, infused supernatural knowledge, gave gifts to men, gifts of strange tongues, whereby it was propagated through all nations; gifts of interpretation of tongues, gifts of working miracles, of discerning spirits, of casting out devils.

In a word, it reformed the most obstinate and incredulous sinners; raised the humble and dejected, fortified the faint and weak, pulled down the mighty; and that which was supported by laws and edicts, the heathen superstition, though fortified by arms, cemented by interest, and maintained by subtle arguments of human wisdom, and all the cunning of the devil, which, for so many thousand years, had taken possession, fell, like Dagon before the ark, to flatness and nothing. For the word of God is sharp as a two-edged sword, to the dividing in sunder of the soul and spirit, the joints and the marrow, discerning the very thoughts and intentions of the heart.\(^1\) Finally, it is to those who duly receive it the power of God to salvation.

Now, as to this extraordinary gift of miracles by virtue of this Word, and those who propagated the faith, we read of many whom our Blessed Lord and His apostles had healed and raised from the dead, who lived

\(^1\) Heb., iv., 12.
to confirm it to them, till near Trajan's reign. And even the story of Agbarus of Edessa, as related by Eusebius, that our Blessed Saviour, being addressed by letter, sent Thaddeus to cure him, (though not so expressly named in the Gospel) has nothing in it which can justly be reproved; that grave Author affirming that he found the passage in a record at Edessa, in the Syrian tongue, and translated it into Greek. This is likewise attested by St. Ephrem, and so abundantly cleared to be a truth by the learned Valesius, and others, as admits of no further doubt. And such miraculous and supernatural gifts remained long after among the faithful, as long as it was necessary; namely, till the Gospel had become universally planted and received; its sound going into all lands.

Justin Martyr, who suffered 165 years after Christ, and Irenæus (A.D. 206) assure us that the gifts of prophecy, tongues, and healing remained even to their times; mentioning, also, the ejection of devils, and the raising of the dead. As to their since being ceased or very rare, a plain and full reason is given by an apostle himself, where he tells us that miracles are for them who do not believe, not for those who do, and are already converted. Nor is it reasonable that the universal laws and ordinances of Nature, and in their course, should, without great and urgent cause, be changed for the humour of every petulant sceptic, when there is already sufficient

---

1 So Quadratus (A.D. 127), a disciple of the Apostles, affirms in his Apology to the Emperor Adrian, which stopped the persecution against the Christians.
evidence to oblige our belief. Were it otherwise, every individual person, to the end of the world, must have, forsooth, the miracle shown, to gain his assent to what all his forefathers, for so long a tract of time, had believed. This were to make cheap the wonderful works of God, and they would cease to be miracles.

Besides, as for miracles ruining the truth of things, they are still but extrinsical, and would be invalid without that self-evident impression of the same Divine power, wisdom, and goodness of God, intrinsically effecting a holy life. Besides, whatever doctrine or religion consists in believing things future, absent, and invisible, is to be known and maintained by faith in Divine Revelation, and not altogether by immediate and sensible evidence only, or mere discourse.

In the mean while, all true Christians have a kind of internal knowledge, from the faithfulness of the truth and purity of the Gospel, and their more illuminated, quickened, and sanctified souls, to attest the Divine Truth. Indeed, to prove the Scripture by this alone, one cannot avoid the circle; since they who would assert truth by testimony of the Holy Scriptures cannot prove the Trinity but by the Scripture. How should infidels be converted, who have not the means to attain these proofs? Therefore, to convince them has God ordained miracles. Notwithstanding, as to us, such a degree of faith as powerfully operates on our lives is to be imputed by us, no less than by them, to the grace of God alone, and to His Holy Spirit; though not as working always and immediately, but in rendering the means
effective. And if this be only human faith, proceeding from natural certainty, what can be divine?—since man can but certainly believe a thing to be truth, and so believe as to live accordingly. If there be a moral belief, let men show a more convincing.

A third assertion of the undoubted truth of Scriptures is their wonderful preservation.

3. Preservation.

The Jews would die a thousand deaths rather than depart one jot or tittle from their law. And the whole body of the Levites were, therefore, the guardians of the Holy Books, which were no less than seven times read over, yearly; an express injunction prohibiting any the least addition or diminution, notwithstanding the changes, divisions, separations, captivities, sects, schisms, and other disturbances among them, during so long a tract of time. They carried them wherever they went, distributed innumerable copies, most accurately examined (even to the number of the very letters and their places, how oft soever they occurred), so as it is not imaginable they should be universally corrupted. Nay, so careful has been the Divine Author to preserve those sacred fountains pure (a drop of which is never to fail or pass away), that Providence so ordered it, that the Jews themselves, who were so long their depositaries, have not perverted so much as one of those texts, which so plainly speak of the coming of the Messiah, whom their fathers crucified.¹

¹ See Mr. Thorndike's Epilogue.
How is it to be imagined that a people, so dispersed, errant, without leader, country, priest, or prophet (nay, without distinction of tribes, and almost without knowing of themselves), should so exactly have conserved the Mosaic law, and other holy writings, but that they beheld the Land of Promise as their own, and had title to it, only by the Scriptures, which were their evidence?—I say, how is it imaginable they should neglect the care of preserving those records? Both prince and people were, to this end, among others, commanded universally to read and meditate on them day and night, abroad and at home; so as it was impossible they should forget them. They were often, indeed, reproved for their traditions, but never suspected of corrupting the Scriptures. And, as to the New Testament, many authentic copies, Tertullian assures us, were extant even in his time.

Thus have the Holy Writings been preserved, in spite of all the malice and purposes of wicked men, and even of the profanest potentates, who have had it in their power to suppress what they pleased. But neither the rage of tyrants (industriously set on it, as Julian and others), nor the flames of fire, nor long tract of time, could make any impression on the Scriptures, or extinguish their light, because it came from God. The world shall pass away, but the Word of God shall endure for ever;¹ though men and devils conspire to destroy it.

The Jews as to the New Testament, the heretics

both to New and Old, have showed their calumny and spite. Herod, by his cruelty to murder the author; Satan, by his temptations; and the Roman Emperors, by their ten bloody persecutions to extirpate His disciples, so as books never met with greater contradictions; and that, because it came to destroy the kingdom of the prince of this world, and set up that of Christ. Thus we read that, in one single province in Egypt only, when Dioclesian would have burnt all their Bibles, seven thousand rather chose to die and suffer martyrdom than give them up.

It was by a no less signal providence that, to prepare the Gentiles for its reception, and as the coming of the Messiah, according to the prophecies drew near, it pleased God to stir up that learned prince Ptolemy Philadelphus, to have those glorious Oracles (till now peculiar to the Jews), translated into Greek, which was then the only learned and universal language; and that, by the persuasion of Demetrius Phalerus, to enrich that prince's famous library at Alexandria, whereof he was keeper.¹

Another notable means of preserving the sacred text has been the Masora, or critique, so called, delivering the genuine writing and reading; a work of admirable use, as containing all the minutiae of verses, sentences, points, accents, even to a single iota, to prevent

¹ The history of this work we have related by Eusebius (De Præp. Evang.), Philo, and Josephus; and the exceptions against the suspected part of it (as legendary) in Scaliger's Notes on Eusebius, and Bishop Usher on the Septuagint.
all addition or subtraction, so as to have numbered how many times the same letter occurs in the Old Testament. This traditional critique they hold to have been as ancient as Moses himself, and thence continued to the later prophets. But however this be suspected, it is likely it might be about the time of Esdras, or soon after; or rather near the Maccabees, about which time the sect of the Pharisees sprung up, and who have since filled the *Masora* with a world of trifles. As for the New Testament, besides innumerable editions and translations, that one Concordance of Buxtorf is worth all the Mazorites of the old. To this add *Keri* and *Kelib*, which are, likewise, criticisms about letters, consonants, and words, as what are to be read, written, passed over, and neither read nor written; famed also to be from Moses, though, in truth, not more ancient than Talmud. Besides these, there are the critiques of Ben Ascher and Ben Napthali. Moreover, the *Cabala* is of kin to the *Masora*, dividing the law into *Scriptam*, *Tradtinam*, and *Oralem*. There are also the *Mishna* and *Gemarah*, both of much more use than the *Cabala*, which deliver to us innumerable toys, fables, and many ridiculous and superstitious mysteries; yet all of them serving to preserve the Holy Text, at one time or other.

4. THE STYLE.

The style of the sacred pen-men, had they no other characters to entitle them to their Divine Author, were enough to show they could be dictated by no other than the spirit of God, because there is nothing of human in
it, and wholly different from all other compositions of men pretending to eloquence or sophistry,—things which recommend other writings. These, often forgetting what they mentioned before, or omitting something they forgot, are forced to recall, or add; which the Scriptures never do. The expressions are natural and simple, without flourish or studied elaborate periods, and flattering titles and invitations, to gain credit; but indited with that honest plainness that, if any other history should imitate, it would be rejected and despised by such as mind only to please the fancy and delight the ear.¹ And yet are there parts of it so sublime, and outshining the most celebrated profane authors, that no human eloquence approaches them.

There are in Scripture depths in which the elephant may swim, as well as the lamb may wade. Our Blessed Saviour speaks in an easy, familiar style; his similes and parables are natural, and incomparably pertinent, to the reproof of forced expressions and criticisms, for which ostentatious wits value themselves. And though not always according to the nicer rules of orators, yet is the Sacred style no less majestical. Who amongst them all has reached the rapturous attitudes of the prophet Isaiah? the first of St. John’s Gospel, the Psalms of David, the Songs of Moses and Deborah, Job, Canticles, and several of the Sacred Hymns, which, however they may seem in the vulgar translation, are, in their originals, not only comparable to, but far transcending, the Heathen poesies. And, as

¹ See St. Aug., De C. Dei, l. 12.
to the loftiness of style, breathing of so divine and majestical, that Longinus, the sophist, himself is in admiration at that imperious word, *God said, Let there be light, and there was light!*

The matter is not made tedious by formal argument, yet it is convincing and irresistible. Nor do the repetitions (as in other writings) leave a *nausea*, but still the same relish and veneration. What can move the affections more than the histories of Joseph, the story of Ruth, the sacrifice of Jephtha’s daughter, the friendship between Jonathan and David? What more astonishing than the narration of the Levite’s concubine being abused? What more passionate, and fuller set with rhetorical transitions, than the Lamentations of Jeremiah? What more moving and tender than the conduct of Mary Magdalene, the prayer of our departing Jesus, and the like?

As to variety of readings, transpositions, terms, synonyms, punctuations, they show an unaffected richness without studied art. And such a magazine are the Scriptures upon all topics and subjects; as all the Platos, Ciceros, Senecas, historians, philosophers, and philologists, furnish nothing more plentiful, more useful, and that fall into juster and more shining periods, upon all occasions whatever; adapted to convince, redargue, persuade, and instruct; not with enticing words of man’s wisdom, but in the demonstration of the Spirit, and in power; not in choice phrases and

1 Gen., i., 3.  
2 Matt., v., vi., vii.  
3 II. Tim., iii., 17.  
4 I. Cor., ii., 4.
elaborated methods, and structure of words, but with such light of conviction, depth of speculation, and, in the midst of all this plainness, such energy of operation, such sublimity of matter as nothing can resist it.

There is in Holy Scriptures such access to the weak and feeble, comfort to the sorrowful, strong meat for men, milk for babes; such elevation and grandeur of mind, advancing the humanity of men to the height of bliss; in a word, it is what manna was to the Israelites,—food delicious and accommodated to every man's taste. It is a deep well for depth, celestial for height. As it speaks of God, nothing is so sublime,—as of men, nothing so humble,—it is a bridle to restrain, a spur to incite, a sword to penetrate, salt to season, a lantern to our feet, and a light to our paths. Critique and grammar have too often prejudiced the meaning of the true and genuine text. Men dare not cavil the laws and ordinances of princes, if they are so clear as to be understood, whilst the laws of God are a thousand times more perspicuous. And, were it otherwise, men could not be religious, till they understood the learned tongues. But, since God has called all men to the knowledge of the truth, and, therefore, not many wise, not many learned, but the industriously humble, as well as the extraordinarily knowing.¹

Had we heard the Apostles themselves preaching the Mysteries of Christ, should we have been in doubt

¹ Verba celestis oraculi non sunt restringenda ad regulas Donati; et melius est ut nos reprehendant grammatici, quàm ut non intelligant populi.—S. Augustine.
of their meaning, because haply there might occur some difficulty, or equivocal term, some syllable misplaced? Certainly, the words which they spake are the same they left us in writing, and sufficient to make us Christians, and order our conversation; and to promote the design of God, which was not to charm the world by the magic of words, but by the weight and honesty of the matter; and, accordingly, it succeeded beyond all the oratory and rhetoric of the Gentile schools, and cunning of sophists.

We do not all this while understand, by the style of Scripture, as if all the words and expressions were immediately dictated by an audible voice; I say all, without exception; for that the Decalogue, or Ten Commandments, was first written by the finger of God, and the Tables so inscribed delivered to Moses in the Mount, and afterwards, being broken, were by the same God renewed, we make no question. And so were several laws and ordinances, by immediate dictate, as well in the New as Old Testament; namely, the notice of our Blessed Saviour's Incarnation, first to the Blessed Virgin, then to the Shepherds, to the Baptist, to the Apostles, to St. Paul, at his conversion, and at other times. But this was not always, and upon all occasions, as to the phraseology and style; but they all spake and writ as they were moved and inspired inwardly by the Holy Ghost, sometimes by visions, other-whiles by dreams, Urin and Thummim; whether illustrating the component letters engraven on the pectoral,

so as to make up the response,\(^1\) or by a *teraphim*, inserted in the ephod offering a voice, is by the learned disputed.

Sufficient it is, that the matter was dictated, leaving the wording of it to the holy men, who received the impulse, not as a habit residing at all times in them, but upon especial occasions, as God saw fitting, and by immediate irradiation, as sometimes happened.

There were divers things delivered to the Prophets and Apostles, in images and symbols, in their several visions. And many things and actions they speak of as having done, which they did no otherwise than in prophetic vision and scenical imagery; such as Jeremiah's carrying the cup and the yokes to the several near and distant nations,\(^2\) Ezekiel's besieging Jerusalem, lying above a year on his left side, preparing his food with dung, eating the bitter roll,\(^3\) Hosea marrying a common harlot, rending of his hair, and the like.\(^4\) These doubtless were not real transactions, but things impressed, and represented in their fancies only, and dramatically acted there, not before the people; for this would not only have been ridiculous to them, but unlawful.

These and the like were things of type only, though described by the Prophets as really acted; and were so set down in writing, and published as they themselves conceived them, so as men who dream might do. Though I do not say the Prophecies were only dreams,

\(^{1}\) See chapter ix.  
\(^{2}\) Jer., xxv., 15; xxvii.  
\(^{3}\) Ezek., iv.; iii., 2.  
\(^{4}\) Hos., iii., 1.
but living visions—as the burning bush of Moses, the vision of Ezekiel, and the like, which made deeper impressions on the fancy. Such was the drama showed to St. John, through all the Book of Revelations. For we do not here enlarge on the ministry of angels to this purpose, frequent in the Scripture; nor more immediate inspiration, by which, haply, David and other holy persons, perceiving the usual temper of their minds extraordinarily transported, poured out those holy raptures, hymns, and sentences, as moved by the Holy Spirit; but with this difference from the Pagan oracles, that it was in a pacate way, not in a furious transport, and raving, such as possessed their priestesses, &c.: though sometimes, even in God's Prophets, with more extending zeal and fervour. For, as to the immediate voice of God, it was more especially imparted to Moses, that great Prophet, so extraordinarily familiar with God, because he was to be the basis and original of all the future prophecies; and doubtless he set down the very words he heard in the Mount.

As to the rest, they made use of their own style and abilities, as appears by their various writings and phraseology. Isaiah, a courtier, writes in a more sublime and lofty style than Amos, who was only a herdsman of Tekoa; and most evidently in the Books of the New Testament, particularly the Evangelist St. Luke, and the Epistles of St. Paul,—though both of them very learned men, yet the one writing purer Greek, the other

1 This the Rabbins called Gradus Mosaicus.
2 Numb., xii., 7, 8.
falling often into Hebraisms,—and so of the rest, less versed in the language. For it is not thought that the Apostles had at all times the gift of tongues; but at such periods, and on such occasions only, when it was needful for the conversion of strange and foreign nations and people; so that, according to their acquired parts and faculties, their style appeared; yet still in that wonderful manner, for its peculiar plainness, innocency, and, withal, a secret energy, as no writings could ever imitate to those divine effects.

The Holy Spirit dictated the matter, leaving the narrative to the Prophet: but at no time did He ever make use of idiots or fools to reveal His will to; but those whose intellectuals were entire, though sometimes rapt with a holy enthusiasm. Besides, we find both our Blessed Lord and Apostles not always citing the Scriptures verbatim, but varying and paraphrasing. This they would not have done, had the very words (as was the Pentateuch) been divinely dictated.

Lastly, when we find anything seemingly inconsistent, we are not to examine it by logical and artificial methods, and systems of human science; for all these are things below Divine Inspiration. And, therefore, Cicero doubts of the sybilline acrostics, arguing elaborate and affected diligence in the composition. So true is it that, lumen propheticum est lumen abruptum; and that other maxim of the Rabbins, non est prius et posterius in lege; many things of different kinds being contracted in the same vision, as St. Jerome has observed in the Eleventh of Daniel: for here we find a passing
over of divers inter-reigning princes between Cyrus and Alexander, and the like in Jeremiah, &c. Besides, it is notorious that the scribes of the Temple writ most of the prophetic sayings as the authors happened to prophesy daily; and thence comes it to pass, that chapters, sayings, &c., both in the Prophets, Proverbs, and Psalms, now treating of Christ, then of the captivity, now of one subject, then of another, seem so inconsistent, as not digested artificially, but as the Spirit gave occasion.

5. THEIR CONSENT AND HARMONY.

The consent and harmony of the Holy Scriptures,—how the parts cohere; so as the most seeming contradictions and passages are found to agree in sweet and mutual consent and union (the New Testament with the Old), indicates a wonderful Providence, in answering all the prophecies and expectations of it.

First, as to the consent of Versions, we are to note that, when the gift of tongues (necessary for the first planting of the church) ceased, then began they to translate the Scriptures into vulgar languages. So that Theodoret\(^1\) affirms that in his time the holy books appeared in all languages, and so St. Jerome, who put it into his country's language, the Dalmatic; as St. Chrysostom, the Armenian; St. Augustine (some of it) into the Punic; Cyril or Methodius into the Slavonic; into the Gothic Ulphilus; Bede into the Saxon; Michael Adamus into the German, which he writ in

\(^1\) Lib. 5, de Concord. Græc. et Heb.
Hebrew characters, being a Jew; Jacobus de Veragine translated it into the Italian; Hieronymas Leopoldus into the Polonian; Charles the Fifth, King of France, into the French; Cassiodorus into Spanish; Wickliffe first into English. And by the piety of my noble friend Mr. Boyle, procured to be translated not only into Irish, but into the Indian also; and, through a late collection, through all this our nation, it has been endeavoured, and I think accomplished, in the Lithuanian tongue, Krinokrainsky being their commissioner to collect the charities in order to it.

And the tongues which now are called *learned* were indeed *vernacular*, when first the Scriptures were written in them; namely, both the Greek and Hebrew, as were also the offices of divine service. But that which introduces their enumeration here is their wonderful harmony and consent in all things that are necessary to faith and salvation; all the various lections and difficulties being *in minutioribus* only. And this it was morally impossible to avoid in so divers versions and languages; for so has the providence of God invigilated, that the Faith has suffered nothing; no, not from the malicious Jews. Thus much concerning the consent of translations, of which we shall speak more at the last Section of this Chapter.

We observe a most wonderful consent, also, in the types and figures of both Testaments, as that the first Adam was a figure of Christ; the second Adam, though to a contrary effect, of life by his death; assuming our flesh, to be Lord of all things in it, as the first Adam
had dominion over all creatures. So Noah and the Deluge figure the church by baptism. And, indeed, whatever else befel the patriarchs, prophets, and martyrs in the Old Testament were types of what Christians should suffer under the Gospel, as at large in the eleventh of Hebrews. In like sort, their pilgrimages, the deliverance of the Israelites out of Egypt, difficulties in the wilderness, are figures of the afflictions and persecutions which the saints were to go through before they could come to heaven.

In a word, it is considerable that whereas so many other writers of the same sect or profession, be it of human or divine matters, historians, lawyers, and philosophers, frequently differ even among themselves, these holy writers deliver the very same doctrine and history, without any discrepancy; and, whenever they but seem to do otherwise, the differences are not only small, but easily reconciled by other parts.

6. THE MATTER AND SUBJECT.

The matter and subject, or rather history of the Holy Scriptures, does certainly exceed all the writings and histories in the world. For as it begins, so as never history did, from the Creation, so it proceeds to show what shall be the end. First, as to the historical part; it tells us how the Almighty fiat created and

1 Romans, v., 12-14. I. Cor., xv., 22, 45, &c.
2 I. Peter, iii., 21.
3 See Mr. Thorndike's Epilogue, book i., c. 5.
4 I. Cor., x., 1, 11. Heb., iii., 19; iv., 11.
educated, out of no pre-existent matter, a confused chaos; and out of that, this aspectable universe, with all its furniture. How man, being endued with an immortal soul, was placed in a garden, or country, of all natural delights and satisfactions; under an easy and reasonable prohibition, for probation of his gratitude and obedience to his Creator and Benefactor, lapsed from that blessed state, by his disobedience, and by hearkening to the temptations of an Accursed Spirit. And how, by the infinite pity of a gracious God, he had re-admission to favour and grace, by virtue of a second covenant; which, performed in this life (after a temporary dissolution and refinement), he should be reinstated in a happier condition than that which he lost, through the mediation of a Saviour; prescribing to him and his posterity, tainted and weakened by his fall, a new law of ordinance, which, being accepted, should make him happy.

Thus have we, in the old covenant, an account of the world before the Flood; how, for the sins of the world, a flood swept away the whole race of mankind, except one family, by whom the earth was re-peopled. Then follow the lives of the postdiluvian Patriarchs, and among them the effect of Abraham's faith, for which was revealed to him the promised Messiah. How his posterity was, in the mean time, to be grievously oppressed; with what signs and wonders to be delivered; how and by what ordinances to be governed under leaders, judges, and kings. How warned by Prophets; whom, disobeying, they were carried captives into Babylon, did seventy years' penance, and thence again
were delivered. And in what condition they continued till the fullness of the time, when Christ, the Lord and true Messiah, conceived and born of a pure Virgin, did, without sin, suffer for our sins in His body on the Cross; thereby paying our debt, and making our peace with His justly-incensed Father. We have there, also, full directions and instructions for the regulation of our lives, nay, of our very thoughts, as well as words and actions, qualifying us for eternal life and glory.

In these holy books, we also learn how this blessed and sacred person, God and Man, qualified to effect this stupendous work of our redemption, was ungratefully rejected, notwithstanding the holiness of His life, the purity of His doctrine, and the wonderful miracles He performed; and what befell those who crucified Him with that hellish spite. Not that God the Father was pleased with the sin of those who executed it, but with Him who, for our sakes, offered His interposition with that love and tender compassion; and for the repairing of His Father's glory by bringing many, through imputed righteousness, to eternal life, triumphing over death and hell.

This leads us, to the calling of the Gentiles out of their superstitious darkness, to embrace the Gospel; and teaches the Jews a more perfect and evangelical law, till now veiled under busy types and ceremonies, figures of the things to come. And this was through the preaching, first of our Saviour, then of His apostles, disciples, and evangelists, by the miraculous descent of the Holy Ghost; enabling them, by the gift of tongues
and miracles, to plant and propogate those mysteries among all nations; and which was to continue (namely, the doctrine which they taught) till the consummation and end of the world. These particulars, together with many prophecies and other events, through all these sacred books, show what they contain, and how necessary it is we should be acquainted with them, and assured of their truth. They show, as in a map, the condition of the Church, under all its dispensations; that there is a God, His attributes, such a thing as religion, and what this religion is, how different from all other worships.

In a word, the Scriptures contain the whole Will of God, as far as He is pleased to reveal Himself, which is as far as is necessary for our salvation. This is the history of the subject matter, teaching us the mystery of godliness—mysteries, indeed, and which the very angels desired to pry into, namely, the Incarnation of the Son, the Resurrection, the Ascension, the Trinity of Persons, the Hypostatical Union. How we are called and how sanctified, justified, and saved. Here we are directed in the way to the Sovereign Good, which those great and learned philosophers have striven to find, but in a way wholly repugnant to the means of ever finding it, without this direction. For where meet we with such holy and perfect precepts, just lives, and examples among the wise men, and disputers of the world? Such a faith as that of Abraham, faith against hope, in which all our happiness lies. Such miracles as our Blessed Saviour performed;—such mysteries as are contained in the Incarnation of Christ. In sum:—where, among
all the institutions and religions of the heathen, so holy a doctrine, consummate of all perfection, as the Christian, worthy of a great and intellectual nature, an immortal soul? That His followers should, in contemplation of things invisible, lose their fortunes and lives here, to live and be happy hereafter!—to overcome by suffering, and believe against appearance!—that abnegation, self-denial, repugning natural inclinations, humility, taking up the cross, suffering infamy and persecution with joy, loss of goods without murmuring, doing good for evil, forgiving injuries, forgiving and even dying for enemies, and for the faith, through exquisite and cruel torments, for an invisible good. Search all the laws, religions, morals, precepts, or examples of our greatest pretenders, and we shall find nothing, or very little, of all this, even among the most refined and sublime of their wise and famous men. They knew not such a thing as self-denial, purity of thought, or that speculative vices are abominable. Policy or vain-glory runs through all their writings. Here, on the other hand, the glory is totally attributed to God; and what was planted in persecution, and watered with their blood, grew up and prospered against all the malice of men and devils.

7. The Effects and Design.

In order to the end, what is more sublime and noble than the worship and adoration of the Glorious Creator? He rewards the creature with all the felicity a rational soul is capable of, namely, with the vision and fruition of that perfect Being, who at once consummates our
happiness to the utmost capacity of the soul. This is the design, and this the effect of the Holy Scriptures, their doctrine and precepts, ennobling and improving the superior man; enabling him to repel the temptations of seducing spirits. Our Blessed Lord did but say, *It is written*, and all the powers of Hell were not able to resist it.

Their design is, to teach us the duties required to render our worship of the Deity acceptable; that it be humble, substantial, significant, spiritual, decent without superstition, as recommending sanctity and inward purity, even to thought and imagination. It requires a righteous and worthy conversation; that the devout be adorned with all the divine and moral virtues (as far as is attainable and consistent with the unavoidable frailties of human nature), namely, justice, mercy, integrity, beneficence, gratitude, patience, love, temperance, fortitude, prudence, peace, and complacency: thus refining nature to a god-like temper, and preparing it for the life above, when it shall receive its full consummation. For the design and intention of the Holy Spirit of God (by whose effusion at Pentecost we continue Christians to this day) was not to gratify men's curiosity or secular designs, and therefore not dressed up in a rhetorical style, in exact and logical method, like other human sciences and philosophical notions; but to be the rule of our faith and practice, and to communicate to us what is necessary for our salvation, by sanctification and grace.

Other matters are only touched in general, and as they appear to common sense. And, therefore, Moses shows us the final causes of things, as proposed by God
to man, to incite and stir up his gratitude; not pretending to teach academical learning, or natural philosophy by physical causes, farther than may lead us to the admiration of the God of Nature.

Thus is the Scripture (as St. Chrysostom calls it) *Ostium ad Christum,*—the way, the truth, and the life. And we find more admirable and saveable matter in one only Sermon of Jesus upon the Mount, than in all the morals of the philosophers; so that Porphyry himself confesses that no sect of those famous men has been able to show how the great God was to be served and propitiated. In a word, the Scriptures are written for our learning, containing the whole counsel of God, the whole duty of man; and, therefore, must nothing now be added to, nothing detracted from, them. Hence that of Tertullian,—*Adoro plenitudinem Scripturarum.* It is a magazine of all necessary truths, come we but with minds prepared. I say, they contain all necessary *credenda* and *facienda,*—all pertaining to faith or manners, either by express word and precept, or necessary consequences; and tending to good order, edification, and discipline. There is sufficient for all our wants, if we come with hearts to believe; but not enough to solve all our doubts, if we will dispute. It is the canon or rule by which to try just inquiries and controversies, not our impertinent and endless cavils.

Such powerful effects have the Scriptures, that (as we noted) they took root, not only in all places, but pierced the very hearts and souls of believers; and thousands lost their lives to save their Bibles, when the

1 Acts, xx., 27.
traitors delivered them to be burnt. For what book, or history, in the world besides, would men be martyred, after all their idolizing of Homer, Virgil, Cicero, and the rest, that the learned doat on? That which no institution, or philosophic precept, among all their voluminous works, could effect in so many ages, was, by the doctrine and efficacy of Holy Scriptures, accomplished like a charm, in a moment, as it were; immediately operating, stilling the passions, mortifying our corruptions, debasing our pride, allaying envy and avarice, captivating our very thoughts and imaginations, and teaching us to live soberly, righteously, and godly, subduing our worldly lusts and pleasures. Thus was St. Augustine converted, by reading (as he tells us) but one period, but one single verse of Scripture: ¹ so soon it finds its way to the most intimate recesses of the heart, beating down its strongest hold, and bringing into subjection every imagination to the empire of Christ.

St. Augustine was scandalized at the simplicity of the style of the Scriptures, before his eyes were opened, and then how did he change his mind! How deplore his blindness! How admire the Sacred Books! He calls the Scriptures profunditas, an inexhaustible storehouse; and therefore we are to search them, says another Father, by digging, as in a mine, for hidden treasure.²

Holy Scriptures being, then, thus designed, namely, that by the knowledge and practice of the doctrine and

¹ [See Romans, xiii., 13, 14. S. Aug. Confess., lib. viii., c. 29.]
² S. Chrysostom. Hom. 40.
rules contained in them, we may attain such happiness; every soul is obliged to search, read, and meditate them with all diligence, earnestly contending for the faith once delivered to the Saints. This was so strictly required, and enjoined so universally in the Old Testament, and so recommended to us in the New, that there can lie no reasonable prohibition to the contrary; whatever a certain Church of great name, out of secular respects, may pretend, and to keep men still in ignorance, lest they should discover, among other errors of it, this monstrous sacrilege; so as well might that [remark] of the learned Grotius be here applied, Meritò suspecta merx est, quæ hâc lege obtruditur, nec inspici possit.¹ But so tyrannically have they deterred men from this necessary duty, that we read of a poor Friar among them who thought himself damned for reading six lines only of St. John's Gospel, in the vulgar translation.

So benign has God been in enjoining us laws so reasonable, as, not contradicting the common notions of human nature (such as the heathens themselves celebrated), were such as are highly perfective of our well-being in this life, as well as that to come. For such are all the precepts of the Gospel rationally considered; nor, in saying this, do we level it only with natural religion, since, besides the things to be done (in which the false religion consisted), there are many things to be believed, as only revealed to Christians, besides the supernatural assistance which they wanted; above all,

¹ "Those wares which are thrust upon us, without the privilege of inspection, are justly held in suspicion."
the gift of the Lord Jesus, for example, and to expiate sin, and save our souls,—His working in us an internal principle of sanctity, if we reject it not.

Lastly, as to all other effects, it has communicated the most stupendous gifts,—converted the whole world, learned and pagan,—and subdued it without force of arms, money, or human policy, which shows it to be from none but Him, who is the Omnipotent.

Moreover, we have, besides all these, the confirmation of undeniable testimony.

8. Testimony.

The things and actions recorded in Scripture were not done in a corner, but were visible and audible. That which we have heard, seen with our eyes, which we have looked upon, and our hands have handled, of the word of life, we declare unto you.¹ The Scripture imposes not any miracles on the faith of those, among whom they were done, against common sense and reason (as those who would fetch transubstantiation out of it), though many of them above our finding out, as being spiritual, and not corporeal. But whatever was the object of sense (as all bodily substances are), visible, and palpable, were done before all the people; and that either by our Saviour Himself, or His Prophets or Apostles, persons well known, and in the face of the sun. They acted and preached publicly, in a well known part of the world, full of the most learned and inquisitive men, teaching also a doctrine threatening eternal damnation against all impostors, deceitful and lying

¹ I. John, i., 1.
They always appealed to the senses, and to the Searcher of Hearts. Besides, the things reported to be done were the most liable to examination and detection, had they been false. Those of the Old Testament were done by Moses and several of the Prophets, in the face of the whole nation, and before kings and princes; nor has ever any historian since denied the matters of fact. And for the New Testament; as to John the Baptist's birth, his father and mother were of the most eminent persons among the Jews. Then, for his preaching, about the fifteenth year of Tiberius,—the Governors of Judea are named and punctually set down,² Annas and Caiaphas being High-priests; so the occasion of his beheading for Herodias' sake.³ So the Nativity of Christ,—what can be more particular than what St. Luke has recorded?⁴ When all the known world or Roman empire was in profound peace (as it was in the reign of Augustus), at the time of the universal census, and when Cyrenius was governor of Syria; he was born in a common inn of Bethlehem, the Blessed Virgin-Mother falling in travail, as she was on a journey; He was laid in a manger for want of another room. All these are particulars which were most easy to have been examined; and so his being baptized about the thirtieth year of his age, His preaching; the miracle at the marriage-feast in Cana of Galilee; His healing the Centurion's servant, a public officer in the army; ejecting the legion of evil spirits, and drowning so great a herd of swine; His raising

1 Acts, iv., 14, 16; x., 39.
3 Matt., xiv.
Jairus's daughter, and resuscitation of Lazarus before so many envious, as well as curious spectators. And, above all, that of His own trial, death, and suffering at Jerusalem, and in so notorious a time as the Passover, when the whole nation of the Jews was in the city; before so great a concourse of strangers, which used to come to that metropolis from all countries. To this add the rending of the veil, or partition-wall, of the Sanctuary, the splitting of the rocks, the graves of the dead opening, and the eye of Heaven, as it were, put out at noon-day, by a miraculous eclipse. Then, as to His Resurrection, there is the testimony not only of the pious women and disciples, but of the very guards of His sepulchre; His being seen by above five hundred at once, besides His appearing to St. Paul. All these particulars were so publicly notorious, and have been so exactly recorded, as never any history whatsoever, in any age, can produce like testimony; for the matter of fact is abundant enough to brave and put to silence all contradiction.

The like may be affirmed of the rest of the Acts of the Apostles: as how Herod, Pilate, pro-consuls and presidents, scribes and doctors, Pharisees and High-priests, Sanhedrim, all of them most malicious and bitter enemies to these proceedings, never once denying the facts; and which were set down in writing, whilst men's memories (who were spectators) were recent: for the Gospel of St. Matthew was written within seven years after; Mark, within eleven; St. Luke's, about twenty-nine years after Christ's Ascension; the Epistles of St. Paul and St. Peter, within thirty; and
all the rest within nearly the compass of sixty years; never yet convicted of forgery. And the entire volume of Scriptures has been generally received by all Christians, before any General Council, or convocation of Clergy, or Imperial edict, was so much as heard of. *So great is truth, and it will prevail.*

Thus is the credit of Holy Scriptures proved, by no less than ocular demonstration from matter of undeniable fact, and also its propagation,—marks so evident of its veracity, as, next to the contrivance of man’s Redemption, nothing is more wonderful, nothing more stupendous.

Now, besides all these, as for self-evidence (if these be not sufficient), on pretence of such a light in Holy Scriptures, as should immediately operate on the soul, as natural objects act upon our senses (and at this distance of time since these things were performed), it is unreasonable to require it. And yet, though our intellectuals cannot discern the verity of things by immediate intuition, yet, by discourse, and evicting means, it may; namely, that power, by which men are enabled to draw perspicuous inferences from clear and plain principles. There are such evident ones in the Scriptures, as clearly infer that they ought to be believed and obeyed, though God has not been pleased to declare His mind concerning them in so many undeniable instances, as we see He has done, abundantly. But of this we shall say something in the summing-up of this chapter, speaking of the Interpretation of Scripture.

And, first, the Books of the Old Testament are, undoubtedly, of the most venerable and deep antiquity of any writings that we know or ever heard of; for, whether letters were invented before the Flood, we have no authentic records: whereas, the books of Moses we find older than Orpheus, Linus, Musæus, or any, not only of the Pagan poets (who are esteemed the most ancient writers among them), but even of their very Gods—Jove, Janus, Bacchus, &c. This, without any great labour, may be proved to have been derived from the Mosaic writings; so that if, quod antiquum est, verum est, the Scriptures must needs be true, as well as ancient. Nay, so ancient, that even the very last writers of the Hebrew canon—Esdras, Haggai, Zachariah, and Malachi, lived and wrote (most of them) before the most ancient heathen authors.  

Besides, the Scriptures' indisputable prececdency to all other writings, we find not questioned by any author whatsoever; whereas, we meet with so many eminent passages and persons mentioned by profane writers, as Japhet, Abraham, Moses, &c.; the Creation and Genesis of the world, the universal Cataclysm, the concurrent opinion of its future conflagration, the

1 Joseph. Antiq.

2 This testimony Appian gives, though an enemy of the Jews, speaking of Moses. So Justin, Juvenal, Pliny, Tacitus, Longinus, Porphyry, and Julian himself. Nor is it improbable but that, amongst other precious gifts, with which the Queen of Sheba was presented by King Solomon, those holy books, the fountain of all wisdom, were presented to her.
Tower of Babel, the dispersion, and the overthrow of Sennacherib.

Nay, and that they were written by Divine Revelation, too, and ever so esteemed, we have not only the testimony of all the grave and learned among the Christians of all ages, long before the Council of Laodicea, which first collected the canon; but the suffrage of both Jews and Gentiles, who lived about that time. Nor had any thing to the contrary been called in question, till the pride and itch of later critics have erected their impious creeds against some testimonies never before suspected, nor by them overthrown with so much as any show of sound reason. But, in spite of the malice and subtlety of the old and envious Serpent, those sacred records have, by a most signal Providence of the Almighty Author, triumphed over both men and devils, in the hands of those who lived so much nearer the times of their writing than Vaninus, Spinosa, Hobbs, and other audacious monsters, transported with the pride of showing their learning and ridiculous singularity, though at the price of the most evident and saving truths. But we leave these to their deserved doom.

As to that of the Evangelical History, the New Testament, Josephus (no Christian) goes parallel with it, mentioning all along the same persons and things, as of John the Baptist, Herod, Pilate, Gamaliel, Felix, and Festus; the succession of the high-priests, of St. James; yea, and gives a character of Christ himself, of which, I doubt not, Josephus must have heard; and could not reasonably omit, whatever doubt some have made of that illustrious passage.

To proceed, then, with the Heathen and human testi-
Not as if we at all needed them, or built our faith thereon (having already produced such a cloud of witnesses), but to silence all gainsayers. We have from Suetonius, Tacitus, Pliny the nephew, that there was such a person as Christ, the Author of Christianity; and the history of their sufferings, who professed it in all ages after, to confirm it. We have, also, the testimony of Phlegon, about the miraculous eclipse, exactly agreeing with Scripture story, both as to the year, day, and very hour. So the time and place of our Blessed Saviour's nativity were extant in the Archives, even till St. Chrysostom's time, from the Census under Augustus, and agreeable with the public records, from Pilate's information. To this add the opinion of Tiberius concerning Christ, upon the information he had, of his miracles and person, out of Judea; for which he would have had him inscribed among the gods, had not a flattering Senate opposed it out of compliment to that emperor, for whom they would reserve that highest honour.

This history was so authentic, that Tertullian, who lived near that time, provokes all the world to contradict it, if they could: being a thing so public and upon record in his days. And Justin Martyr also appeals to the known acts of Pilate about this passage, requesting the emperor (to whom he dictates his Apology) to search their own records for what he so confidently affirms. The governors of all the Roman provinces being (it seems) obliged to keep exact diaries and registers, and to give the emperors account of all considerable passages happening under and during their ministry; and these, it appears, were extant in the time of this Apo-
logist. Nor has it been so much as once questioned as to the truth. Indeed, Porphyry, revolting from Christianity to Platonism, did all he could to disparage Scripture, but was so fully evicted by Lactantius, Eusebius, Apollinaris, and even in later days by Socinus himself, and that so incomparably (though in other weighty matters sorely erring), as never was victory against a Pagan more complete.

Moreover, as to the Old Testament, and the Creation out of chaos, &c.: Hesiod and divers of the ancients agree that it was requisite, that, for the perfecting of arts and useful inventions, men's lives should have been protracted at the beginning. The story of the Flood is very frequent under the disguises of Deucalion, Ogyges, &c. Nay, they have a tradition of it in the New World among the savages, which shows it was not a partial but total inundation. Alexander Polyhistor speaks expressly of the ark, from which, among all sorts of animals, a dove was sent forth, to examine the temper of the earth.

Who more commonly mentioned by writers than Japhet? The same author (as we noted) speaks of the Babylonish enormous building and division of tongues. Strabo mentions Sodom. The column of salt remained in Josephus's time, and haply does to this day. Eupolemus mentions Abraham as inventor of astronomy, and his migration into Phoenicia; as also his victory over the five kings, for the rescue of his nephew, with other particulars. And Polyhistor is so express, that there is hardly a passage in all Genesis unrecited. Many of these agree with Nicholas Damascene, Theodotus, Aristæus, especially that of holy Job; which (if any) haply might have been written even before Moses.
Manetho and Justin record the descent of the Israelites into Egypt as shepherds, the dividing of the sea, and the overthrow of Pharaoh; their abode in the desert, and their being nourished with a certain snow. The same is almost the entire story of Moses, though with some intermixtures of their own, especially in the book of Artabanus touching the Jews; where, also, is mention of the Egyptian plagues. The same is mentioned by Demetrius and Eupolemus. And, though they pretend that Moses did all those wonders by his skill in magic, yet they record them, and have a tradition of his rod. And as Origen hints, did thence use them in their conjurations, with the name of the God of Israel. Tacitus speaks of the Passover; Justin of the wars of Joshua, and the inscription of his beating out the old Canaanites, which some affirm was found not long since about old Tangier; as also of the building of the Temple, in which the fore-mentioned heathen have particularized many things, not forgetting the basso-relievo of the candlestick, and other vessels, as described in Leviticus, and which are still extant on the arch triumphal of Titus, at Rome; which I myself have seen, and caused an accurate draught to be then made upon the place.

In sum, we have in these authors the mention of the captivity, the history of Sennacherib, recited by Herodotus, the most ancient of all the heathen historians. In a word, so many are the testimonies of the truth of Scripture relations, as there do not appear the like in favour of any other history whatsoever. For, were the

1 The Phoenician annals mention David and Solomon, and their leagues with Tyre.  
2 Confer. Cels., l. 4.
tradition of the Scriptures' antiquity and veracity not enough, that very reason, which leads us to the belief of any moral thing, were abundantly sufficient. Since, if we will only credit immediate demonstration, how should any know they were born from such parents, whose children they are reputed? Surely, such doubts would be very impertinent. We have for these sacred oracles as much assurance as of the work of any author, of which we make no question; and he who should not negociate into the Indies before he had seen them, must resolve never to see them. And what common interest can the world have so to deceive, and be deceived? Much less could the Mosaic law, least of all the Gospel, have found credit (the one imposing such an endless morosity of precepts to observe, and the other the Cross of Christ), had it not been originally manifest that such things were done to evidence that and this. By the same means that all records of learning are conveyed to us, are the Scriptures evidenced to be matter of historical faith; but, inasmuch as the matter of them had never been received but by the work of God, in that respect they become matter of supernatural faith, in regard of the reason, moving in the nature of an object to believe, as well in respect of God's grace, moving in the nature of an effective cause, unless we saw ourselves what was written; which were impossible to every individual man, that either has been or is to be born. What can be more a demonstration? And, therefore, we meet no adversaries, even the most captious and profane, who deny the authors transmitted to us. Besides, it is not any prejudice to our faith, as some fondly imagine, that one should, for all this, be-
lieve the Scriptures for reason, which tells us God cannot lie or deceive; for, if they tell us we must believe them, because they are the Word of God, they say more than that we must believe them for the strongest reason in the world. And those who pretend the natural man receives not the things of the Spirit of God,¹ are abused by the English translation, as if natural there imported only the rational, which, in truth, signifies Animalis homo, a carnal, sensual person, the most averse from rational that can possibly be; and such a man, indeed, receives not the things of the Spirit of God. Let men be first convinced by any means—call it reason or moral persuasion, immediate light, or whatever, that there is a God, and Holy Scriptures His Word, and they cannot but believe Him absolutely perfect, and so no longer dispute His will.

10. TRADITION.

Tradition is either divine or human; the first either dogmatical, touching faith and manners; or, secondly, historical, relating to the actions and lives of the patriarchs, prophets, Christ and His Apostles, and others empowered by them; thirdly, ritual, respecting ceremonies and forms of worship.

As touching dogmatical traditions. Till Moses's time, what was received, the Church had from God immediately; nor during the longevity of the patriarchs needed there any writing of things so fresh in memory, and which passed through so few hands. For Enoch, the third from Adam, might have delivered it to Noah, and Noah to Abraham; or if that be thought scanty,

¹ I. Cor., ii., 14.
Arphaxad, who lived before the death of Noah, above 400 years, died not till Abraham was eighty-six years of age. And then Moses, being born within 250 years of Abraham, and his grandchildren, especially Levi, the son of Jacob (who died in Egypt, A.M. 2385) and grandfather to Moses and Aaron, but 148 years distant, might very reasonably be thought to have received the worship and religion of the patriarchs from his father, without any need of writing or record. But when men's lives began to be exceedingly abbreviated, it pleased God that what they had then by tradition only, (as the seven precepts delivered to the sons of Noah, &c.) should be consigned to writing; especially when God also thought fit to add so many other laws and ordinances, prophecies, and the like, as He did from Moses to the coming of the Messiah; who, abrogating the ceremonial dispensation, introduced that of the Gospel, which was to continue to the end of the world, and be the norma and rule, by which the Church was to be governed and instructed to everlasting salvation. Not that, for all this, she does refuse the testimony of tradition, for the asserting the truth of the Scriptures being the same, which had been received from the pen-men, under whose names they bear the titles; or by any other holy men collecting those materials, and inscribing the first authors' names, as is also usual in other writings. But she gratefully accepts it as God's great and signal Providence, to the exclusion of spurious writings, which the emissaries of Satan would have obtruded on the world, and made to pass for genuine and divine; receiving for doctrines divine the traditions of men, which our Blessed Lord bids us beware of.
In the mean time, when we speak of the tradition of the Church, it is not understood as if either that or the decrees of Councils, or expositions of Fathers, made them to be Scriptures, or had any faculty so to do, (as a late conventicle at Trent arrogates to the Pope) but we believe the Scriptures, from all the topics we have mentioned in this Chapter, and especially from their energy and effects upon the lives of men, by which they show themselves to be \( \text{αιτωπίστοι} \), and to be embraced \( \text{propter se} \), by those who come prepared to receive them: of which anon.

Scriptures being then received as \textit{Divine}, cannot wholly depend on the sentences of the Church as judges; since an authority sacred and solemnly declared is required in a judge; and this no judge can so much as pretend to, but from the Scripture. For we are to judge and know the Church by her faith and doctrine, not her faith and doctrine by the Church; which were to run the circle of that of Rome, pretending to prove her own authority by the Scriptures, and the Scriptures by her authority. Wherefore it is not, I say, the authority of the Church alone, which induces our assent; forasmuch as the Scriptures were the Word of God, before they were written, true and salutary, before they came to us, and precedent to the Church. Because the being of a church, supposing the profession of that religion the Scriptures teach, as sent from God, and the credit of those Sacred Writings necessary to the being of a church, necessarily proves them more ancient than the Church. So as, in order of reason, the Holy Scriptures (namely, the doctrine
THE TRUE RELIGION.

contained in them) must be precedent to the Church, as Mr. Thorndike learnedly makes appear;¹ where he also clears that saying of St. Augustine against the Manichees. *Ego Evangelium non crederem, nisi me Ecclesia Catholicae moveret auctoritas*, to be plainly not as meant of a church, as a corporation qualified to oblige its members, but of all Christians, persons of common sense, asserting the truth of Scriptures from such evidences as we have brought, namely, the consent of all people and nations; by that authority which miracles began, hope nourished, charity increased, succession of time has settled; conversion of Gentiles, predictions of prophets, and the like. All these constitute the Catholic Church and its unity, and are what the father intended by this famous sentence; and is as much as to say, that if there were any word in Scripture which could be brought to prove what the Manichees taught, he would suspend his belief of that Gospel, that should assert it. For if the reason, for which he once believed the Church, that the Scripture is true, should be supposed false, there could be no reason obliging us to believe it true. Indeed, in a case of doubt or doctrine, it were more discretion to consult the Church, and take the reason of it, from what the universal Church teaches, than from particular Christians, who cannot be presumed to understand it so well. And this is nothing to our present case: we are speaking here of what is sufficient to induce our belief, without the authority of the Church, which some so much insist on, as the only reason of our belief, having made

¹ Epilogue, Prin. of the Truth, &c.
it evident that her authority can be supported from no other than the truth of Scriptures, appearing so both to our reason and senses.

Now, the same reason which governs controversies in any point of religion ought to determine here. For the same Holy Ghost which effectually moves us to believe, supposes sufficient reason, moving in the nature of some object proposed to be believed. Therefore neither the truth of Christianity, nor Scripture itself, is admitted on the dictate of God's spirit, but presupposes the reasons convincing us that they are to be admitted. And, of consequence, the gift of the Holy Ghost, enabling the believer to continue in the profession and exercise of Christianity, supposes a belief of that religion which we sincerely profess; and by consequence the reason why we believe, which will not fail to infer the belief of Scripture.

To Infidels, therefore, such reasons are to be alleged as may first convince them, without pressing the truth, till it first appear to be true; and then whatever moves a man to be a Christian will force him to be a Christian.

Miracles, done by them from whom we receive the faith, are the only motive to show their Divine Author: and therefore we are obliged to believe and receive what they assert; yet not merely for the wonders, but the sanctity and excellency of the matter, justified by the light of nature, and harmony of both Testaments, justifying one another by the events. Now, that such miracles were performed, we have the concurrent testimony and tradition of the universal Church, taking here the Church for all believers. And though they
did or do not all behold them with their eyes, their ears may well supply that sense; and common sense shows that those things which all the world agree in are no less evident and certain (morally) than what we see with our quickest sense; especially when there can be no common interest to deceive, or be deceived. Upon this account it is, that men believe such places, cities, and countries really to be, which they perhaps never saw, but only heard of. And learned men are confident, upon the same reason, that there were such historians, orators, and poets, as go under the name of Herodotus, Livy, Xenophon, Demosthenes, Cicero, Homer, Virgil, &c. But as to those of Holy Scripture, there is yet a far stronger reason to believe they came from God alone, because the law and religion they teach and enjoin propose and exact such difficulties and contradictions to flesh and blood, by the moroseness of that of Moses, and sharpness of the Cross of Christ, as, had it not been originally manifest, and evidenced bright as the meridian sun, that such things were done as they relate, the world would never have embraced them. And since all cannot be eye-witnesses of what is passed, let it suffice that we have the suffrage of all who are gone before us, and which common reason makes to be as authentic evidence, as are our other senses. For, by the same means that all records of learning are transmitted to us, are the Scriptures proved to be matter of historical faith. And inasmuch as the subject of them had never been received but by the extraordinary work of God, in that regard, they become matter of supernatural faith.

The Church is no more in comparison of the Scrip-
ture, to the pretence of being the only cause of our belief, than was the Samaritaness in comparison of Christ, our Lord Himself. We believe not because of thy saying; for we have heard him ourselves, and know that this is indeed the Christ, the Saviour of the world.¹ The reasons for which our Blessed Saviour tells us Himself that we are to believe, are contained in the Scriptures. Lastly, as to the testimony of the Spirit, we can have no assurance even from that, but by our first believing, upon the reasons and inducements above alleged; seeing none can know that he has the spirit of God, without knowing he is a sincere Christian, and worshipper of God, which supposes the truth of Scripture.

These things were highly necessary to be promised, and cleared from all possible doubt, because nothing can be necessary to salvation, till it appear that the Scriptures are the truth of God, and to be our rule, by consequence of that which God has given us to judge and determine the truth of things by—namely, reason.

SECTION III.
1. OF THE BOOKS.

The Holy Writings, which, by way of eminence and for their high importance, we call the Scriptures and the Bible, are certain books containing two Testaments, the Old to the Jews, His peculiar people, and Church before the coming of the Messiah; and the New Testament left by our Lord Jesus Christ, the Messiah now come, and pertaining to both Jew and Gentile, proselyted to Christ's religion, and by which we have title

¹ John, iv., 42.
to salvation, and inheritance of the life everlasting. These Sacred Volumes, namely, the matter contained in them, delivered from God the Father, and His Son Jesus, by the Holy Ghost; first to the patriarchs, then to Moses and the prophets; after that, to the apostles, and from them to their successors down to the present age we live in, (as we shall make appear) contain the undoubted oracles of God, and the mysteries of our salvation. For after the voice of the Lord Jesus, who is the Bridegroom, Pastor, and Bishop of our souls, the Church, His Spouse, is to be heard; and She it is who has been the keeper and preserver of this celestial depositum, not as the Mother, but the Nurse; not the foundation, but the angular stone; not the fountain, but the stream, which has from hand to hand conveyed to us this precious and inestimable treasure.

The Holy Scriptures, delivered by Divine Revelation, Inspiration, Voices, Visions, &c., are either,

1. **Historical**; 2. **Legal** or **Ritual**; 3. **Prophetic**; 4. **Sapiential**, or **Doctrinal**.

As to the time they were first written and published, we have already proved them the most ancient, some before the Captivity, namely, from Moses to Zephaniah; some during the Captivity, as Ezekiel, Daniel, &c.; and some after, as Haggai, Zacharias, Malachi; of which more in this Chapter.

Those of the New Testament consist likewise of—

1. **History**; 2. **Doctrine**; and, 3. **Prophecy**: First, the Four Evangelists, with the Acts of the Apostles, who planted the Christian Faith immediately after the Descent of the Holy Ghost, enabling them by an ex-

1 II. Pet., i., 19, 20, 21.
traordinary gift of tongues, and opening their minds, to understand the Scriptures, to publish it among all nations. 2. Then the *Epistles*, written by the Apostles to the Churches they had converted. 3. The *Apocalypse*, or Revelation of things recondite and of unknown event, importing prophecies of things to come. These being all the genuine and undoubted books of Holy Scripture, this last shuts up the Canon, and they are reckoned in this series:

1 His Prophecy reaches to John the Baptist, and so unites both Testaments.

2 Written (cir. A. D. 94) to the Churches of Asia. It seals the Canon. Rev. xxii., 18. "If one add or take from a rule, it ceases to be a rule." S. Chrysos. Hom. 12, in Phil. 3.
THE TRUE RELIGION.

APOCRYPHAL BOOKS;
Not received as Canonical Scriptures, but containing, besides many excellent moral sentences and instructions, the history of what happened from the Captivity, and last of the Prophets (Anno Mundi 3589, to the year 3875), approaching the coming of the Messiah, Anno 4000. They are fourteen in number.

I. Esdras. II. Esdras.
Baruch (with Jeremiah's Epistle to the Captives).

Tobit. Song of the Three Children.

Judith. Susanna; Bel and the Dragon.

Esther (a fragment). Manasseh's Prayer in captivity.

Wisdom. I. Maccabees.

Ecclesiastes. II. Maccabees.

Which yet the Church (as St. Jerome affirms) does allow to be read, for example and instruction; but neither proves nor pretends to establish any doctrine upon them.¹

So that whatever books have been imposed since the Canon, as containing necessary doctrine, and saving truth, we are in nowise to receive them as such.

Now, the means to distinguish them is, amongst other marks, to trace the tradition; and if we find the doctrine delivered to have taken beginning any time since the Sacred Canon was fixed, we are to reject them as spurious. This well observed pares off innumerable superadditions from that Church, which has such an interest to advance her own traditions, not only as equal, but above the Holy Scriptures. Ejus enim Pontificis auctoritas major est, quàm Scripturae.²

¹ Jerom. Proleg. in Lib. Solom: ad Cromat. et Heliod.
On the contrary, when, in tracing a tradition, we discover no footsteps, when it was not used, we may presume it to be, though haply not \textit{jure divino}, yet \textit{jure Apostolico}. Such are the order of Bishops in the Christian Church, immediately succeeding the Apostles, \textit{Infant baptism, Confirmation}, the more solemn Fasts, and Preparations before the anniversaries of our Lord's Passion, and the like. And those who hold the Scriptures clear in all things necessary to salvation, have no reason to exclude the tradition of the Church in these things.

We now, then, proceed to the Testimonies, which prove the Canonical Scriptures only to have been in all ages of the Church the same which we at this day receive, and for such acknowledge them. And for this we need go no farther than to that excellent history of the late Bishop of Durham,\(^1\) my intimate acquaintance, compiled when, by his Majesty King Charles the First's command, he officiated in my father-in-law's\(^2\) chapel at Paris, during that horrid rebellion which banished his present Majesty and many of his loyal subjects out of England; endeavouring to destroy the Church thereof, and consequently the most primitive under the cope of Heaven. But God Almighty, who first reformed this Church, and so signally restored it, will, I trust, still maintain and preserve it to the end of the world.

It is from this Treatise that we shall assert this Article; and first show why the Books of Holy Scrip-

\(^1\) Dr. Cosin's "\textit{Scholastical History of the Canon of Holy Scripture.}"

\(^2\) Sir Richard Browne, Resident for his Majesty there, from 1641 to 1660.
ture are called *Canonical*. They are named *Canonical*, as being the *rule* by which we are to *square* all our actions, and are, therefore, by the Fathers, called *Stat-teram Trutinam*, by which we are to weigh, as well as square, measure, and examine our faith and belief.

Now, although the Jews counted no more in their Canon than do the Reformed Churches at present, yet they ranged them not into so many classes; for they made three only. In the first of these was only the *Pentateuch*: 2. All the Prophets: 3. Sacred Writers, as they called them, distinguished from the Prophets, for that they had not the mission of Prophets, though inspired by the same spirit of truth. Of the first rank, were Moses' five Books; of the second, four of the first Prophets, and four of the latter; and then, thirdly, the *Hagiographi*, nine; making up in all twenty-two, according to the number of the Hebrew Letters; as being all of them written in that tongue (then vulgar), except Daniel and Ezra, in the Chaldean, which they best understood. But in this recension *Ruth* is but an appendix to *Judges*, as *Lamentations* are to Jeremiah. Nor are *Samuel* and *Kings* accounted more than two Books. Then, the twelve minor Prophets, but as one Book, and thence called the Book of the Prophets. And so, both the *Chronicles* were reckoned but as one, as also *Ezra* and *Nehemia*. The reason why they set the Book of Chronicles in the last place was, for their containing, as it were, an epitome of all former passages, from Adam to their reduction from captivity, and so closed up the entire Bible.

All these Books are generally thought to have been

---

thus digested, examined, and revised, by Ezra, the priest, after their return from Babylon, and so delivered to posterity. Nor did our Blessed Saviour speak of any other Scriptures but Moses and the Prophets, no more than did His Apostles after him. Thus the same number of Books and Authors stood the first century; and, in the second, as appears by the Apostolical Constitutions and Canons, where they have not been interpolated; also, by Dionysius, the Areopagite, Melito, anno 160, Justin Martyr; in the third century, as witness Origen, Julius Africanus, Tertullian, St. Cyprian; in the fourth, Eusebius, the first General Council of Nice, St. Athanasius, St. Hilarius, St. Cyril, the Council of Laodicea, St. Epiphanius, St. Basil, St. Gregory Nazianzen, St. Chrysostom, and, above all of this century, St. Jerome, Ruffinus. In the fifth century, by the great St. Augustine, Innocent the First, the Councils of Carthage and Chalcedon; in the sixth, Cassiodorus, Primasius, Anastasius, Leontius, Victorinus; in the seventh, St. Gregory the Great, Isidore, the sixth Council of Constantinople in Trulla. In the eighth century, Damascenus, the venerable Bede; in the ninth, Alcuinus, Nicephorus, Strabus, &c.; in the tenth and eleventh, Radulphus Flaviacensis, Hermanus, Giselbertus. In the twelfth century, Zonaras, Rupertus, Honorius, Hugo de Sanct. Victor, Philip Salitarius, Gratianus, Petrus Comestor, Johannes Salisburyensis, Balsamer. In the thirteenth century, Hugo Cardinalis, Thomas Aquinas, and the Schoolmen, the

Glossers on the Bible; in the fourteenth, Nicephorus Callistus, Johannes Columna, Brito, Nicholas Lira. In the fifteenth century, Thomas Anglicus, Thomas Waldensis, Paulus Burgensis, Alphonso Tolatas, Dionysius Carthusianus. In the fourteenth and last, being just before the present century, Francis Ximenes, J. Pius Mirandula, Jacob Faber Stapalensis, Ludo- vicus Vives, Erasmus, Cajetanus, the famous Trans- lators of all the Bibles hitherto; all these being either Greek or Latin Fathers, Martyrs, Confessors, Bishops, Divines, and the most renowned persons for sanctity and learning of both Eastern and Western Churches, men of undoubted credit.

The whole stream of the Catholic Church thus hands down to us the Canon of the Sacred Scriptures, with one voice, from all the famous countries and churches in the Christian world, till, by a new (and never till then heard of) Decree of a packed Assembly at Trent,¹ against all the above-mentioned authorities, are adopted the Apocryphal Books into the Canon, damning all people who receive them not pari auctoritate with the undoubted Oracles of God. And that only and visibly to support certain corrupt dogmas and dangerous errors in religion, for the advantage of the Court of Rome, and the tyranny, pride, and covetousness of an interested party, as may at large be seen in the author² of the history of that pretended Council, contrary to the suffrages of the most learned and religious amongst them, and of all the Princes and other Potentates who sent their ambassadors. The Protestants, however, who came, and such as came with any intention to reform

¹ Sess., iv.
² Sleiden.
errors and abuses, were not admitted, which would have made it a free and Ecumenical Council.

Thus, to gratify the Roman Pontiff against the universal testimony of Scripture, Councils, Fathers, Schoolmen, Doctors, and learned Divines, of all former and subsequent ages, do they advance their new and unwritten traditions, as sacred and canonical, and to be received with the same filial affection and reverence.

The reverend Council, who stamped their Canon to represent the whole Christian Church, was composed of about forty Bishops, of whom many were only titular and pensioners to his Holiness, and some without any learning. Of the Greek Church, they had not one Bishop, but one from England, none from Germany, Helvetian, or Northern countries; two from France and Spain.¹

Behold the goodly Ecumenical Council, which durst equal those Books with the all-sacred and venerable Scriptures—books which had been rejected and excluded by such a cloud of witnesses as we have produced. And that to establish doctrines totally repugnant to the Christian truth, delivered by our Blessed Lord, as

¹ Thus writes the ingenuous historian, who himself was present. Audax inceptum videbatur, quinque Cardinales et quadraginta et octo Episcopos auctoritatem Canonicam libris anteà incertis et apocryphis dare. In his tamen præsulibus non temerè reperiri aliquem præcellentis doctrinae, laude insignum; Leguleios esse aliquot, in juris professione fortè doctos, sed religionis non admodùm intelligentes, paucos Theologos, cosque eruditione intra vulgus Theologorum, plerosque Aulicos; ex iis aliquos titulares tantùm, et Episcopos magnam partem Civitatum adeò minutarum, ut si quisque Clerum et populum, cui præsit, referat, vix omnes millesi-mam orbis Christiani partem representant. Hist. Con. Trent., lib. ii.
we shall come at large to show in the eleventh chapter of this Treatise. But this is that Church which has presumed to make new Articles of Faith, and to anathematize and curse all those who receive them not for Gospel, thereby condemning, with unheard-of insolence, all those ages, Fathers, and Writers, who have faithfully adhered to primitive truth.

In the mean time, as to the Apocryphal Books,—though we acknowledge them useful, both for the historical and instructive part (as are many other excellent books not divine), yet were they never admitted for authentic Scripture; nor were they written in the Holy tongue, no, nor so much as translated by the Septuagint; but they were first written by the Hellenist dispersed Jews in Persia and Egypt, never owned by the ancient Hebrews, or once cited by our Blessed Saviour or the Apostles; nor were they used of old to be read in churches, and, when permitted, with the caution, not as to establish any new doctrine or faith upon them; nor were they read by the Bishop there, but by some inferior minister, in a lower part of the Assembly.¹ For there had been, from time to time, divers vagrant pieces (to which we do by no means compare the Apocrypha, which, after those of the undoubted Canon, we esteem preciously), endeavoured to be vended and imposed upon the world for authentic and divine.

¹ Non tutò cuivis est credendum libro,
Qui venerandum nomen S. Scripturæ præferat,
or,
Qui Biblii prænomen augustum serat.

Plato tells us of certain *agyrtæ* and impostors of his time, who went about with such ware under the names of Musæus and Orpheus; that under such splendid and famous titles they might allure men to buy their books. The argument of these were divers forms of expiations for the most prodigious and horrid impieties; at the bare recital of which conjurations they were absolved. About P. Gelasius’s time there was a world of supposititious writings vended and received by the heretics. How long has that spurious Hermes Trismegistus cheated the people? Pastor, Dionysius the Areopagite, Epistle of St. Bernard, Enoch’s prophecies, &c.? Liturgies ascribed to the Apostles, Sibylline Oracles, Christ’s Letter to Agbarus, the Gospel of St. James, and that of Nicodemus, &c., most of which are very happily now lost. Indeed, divers of the Fathers did often cite these Apocryphal books under a venerable name, as also they sometimes did the Fourth of Esdras, the prophecy of Enoch, &c., under the title of Scripture, as in a large and popular sense, but not as canonical and divine, but only to distinguish them from mere profane and common.

In sum, it is enough to determine this, that there is neither Bible, manuscript or printed, which has any catalogue set before it, to decree what books were canonical; but the known and universally-received Prologue of St. Jerome, distinguishing the canon from the Apocryphal, both particularly and exactly, as all the ages, since his time to this, agree, that of the Synod of Trent excepted, which is of no validity. To this add

1 Σελήνης καὶ Μουσών ἐκγένεσιν.
2 For these see Dr. Wake.
the testimony of Josephus,\textsuperscript{1} as cited by Eusebius,\textsuperscript{2} above all we have named. As to those Books of the New Testament, which some critical persons made some scruple about, as 	extit{St. Paul to the Hebrews}, 	extit{St. James's Epistle}, the Second Epistle of Peter, the Second and Third of 	extit{St. John}, 	extit{Jude}, and the Revelation of 	extit{St. John}, attributed to Cerinthus, the heretic; it can never be made out that they were rejected by any entire Church, Council, or sober author: but of this anon.

Some of the Sapiential books, and others, not received into the canon, were (as we have showed) permitted to be read to the people for instruction and encouragement, for their many wise sentences and moral lessons contained in them; and for the examples of constancy of some excellent persons; and because they continue the thread of Sacred History of the Old to the near approach of the New Testament; but were still accounted Apocryphal and out of the list.

Indeed, St. Paul, writing to the Romans, and Corinthians at Athens, cites Aratus, the poet Menander, a comedian, and Epimenides, or, as some will have it, Callimachus; and so also 	extit{Jannes} and 	extit{Jambres} are names not found in the canon, but likely out of some Talmud or record. So St. Jude\textsuperscript{3} mentions a passage from Enoch not extant. But then the things are both certainly true, and such as give greater light to the subject treated on. And to such Apocrypha we have still great veneration. But that any thing suspicious could be foisted, or creep, into the Holy Text, seems morally impossible; so many, that is to say, no less

\textsuperscript{1} Joseph. cont. Apion., l. 1. \textsuperscript{2} Eccles. Hist., l. 3, c. 9. \textsuperscript{3} Jude, 14.
than twelve copies being delivered to every tribe, and so many again by them to every particular Synagogue; while the originals were kept in the ark with all imaginable care;¹ as they were afterwards by the Christian Church, and translated into so many languages. And this by persons of different countries and religions too, yet all agreeing in most material points. For, as to the various lections, they are not at all considerable, in prejudice to any point of doctrine or history; and, therefore, we do not condemn the study of good letters, tongues, and other helps of human learning, but embrace and encourage them. The small differences occasioned by their criticisms are no way capable of shaking the foundation of the faith contained in them; not to pass over that where there are really any difficulties, they are still useful to humble us, and defend us from the superstition of the simple letter, and doating upon terms.

It has been said by some,² that the Pentateuch were but collections of certain ancient Jews, rather prescribed by Moses than compiled by him. And, as to the Book of Job, that it was written by Moses, or (as some think) before him, and is, therefore, the most ancient of books; that though the ground of the history be true, yet that the dialogue with his friends is amplified and adorned, to make the narration the more useful and agreeable; nothing of which invalidates any thing of their being divine.

¹ These were dispersed through all the world when the Jews were scattered, so as they could never come together to forge or contrive any thing to corrupt the sacred books.
² Spinosa, &c.
Now, whether the Epistle to the Hebrews was written by St. Paul, Luke, Barnabas, or Clement, is as little material, since we find him to have taken out several passages, word for word, from his Divine Epistles; and, as to the rest of the chapters, the accurate examination of so many learned, great, and holy persons, acknowledging them for genuine; we have, in particular, the suffrages of Justin Martyr and Irenæus, Ignatius and Polycarp—men who lived so near the time of the Apostles, as to have some of them conversed themselves with them. Nor were they yet admitted into the Sacred Canon without the utmost caution, accurate sifting, and examination. That they were at all questioned proceeded from their being directed and addressed to particular Churches, and not to all; which subjected them to the proof, and that, doubtless, by producing the originals themselves (for many such there were in Tertullian's time), to the entire satisfaction of the Churches; as that of St. Mark's Gospel is affirmed to be yet extant at Venice. And since we have mentioned this Evangelist, it is noted that the last chapter of that Gospel was found but in some few copies, and, therefore, indeed, rejected by some, but for no approved reason. That St. John writ his is thought to be, for that the other three had related the history of but one year only of our Blessed Saviour's life, namely, from St. John the Baptist's imprisonment to our Lord's death.

Esther was left out of the Jewish canon, as some affirm; and, indeed, the six last chapters are not in the Hebrew, but seem to have been added by some Hellenistic Jews.

Now, as to the objection that there was not always
an universal assent as to these and other books more lately received into the canon, it lasted but a little while, namely, till things and circumstances (as we said) could be duly examined, and nothing imposed and obtruded on the world but what was genuine and authentic; it being soon found that the books we now own for such were owned and received by the Church; and that such as were at all questioned retained nothing which concerned the faith, or any morals dissonant from those books, which never were called in question. And for those which were as above mentioned,1 supposing (but not granted) them not to have been so immediately dictated by the Holy Ghost, the Christian Doctrine was able to defend itself without them. The controversy relates not to their antiquity and truth, but to the writers; all of them being acknowledged to have been penned by Apostolic men in the Apostolic age.

Daniel of the Old Testament was, it seems, one of the last received by the Jews, for fear (it is believed) of provoking those tyrannical princes whom these prophecies concerned; and the like is conceived of St. John’s Revelations, who was the last of the Christian Prophets. Not that it did yet utterly expire in him, since we find the gift unto Justin Martyr’s time, who lived 150 years after Christ; but, however it might be given to any, it was not so as to add any thing to the Scripture, though many admirable virtues of the Holy Spirit did manifest themselves by them. The like may, haply, be safely affirmed of that Second Epistle of St. Clement to the Corinthians, breathing of an Apostolic spirit; the first especially, as thought to have been written before the canon was fixed,

1 See Pole’s Synopsis Crit. in Apocal. Vol. ult., 1659, &c.
and has, after a thousand years that it lay hidden, been pronounced truly authentic. We have a no less ancient copy of it in His Majesty's St. Hecla's Bible at St. James's. To this might I add the Epistle of Polycarp to the Philippians, and those seven of St. Ignatius, published by the learned Isaac Vossius from a Florentine manuscript, as our late Bishop Usher had done before.

To return, then, to the Old Testament. It is certain that the later Prophets ceased in Malachi, about the reign of King Darius, to the end that they might expect that New Dispensation of the Messiah now approaching, and prophecied of by Joel.1 Of this St. Peter makes use, to take off the admiration of the Jews, when, on the day of Pentecost, the Holy Ghost was so plentifully effused. Whence St. John the Evangelist2 calls it the Testimony of Jesus; and St. Paul, his imparting gifts of men.3

2. Copies.

We shall now say something concerning the Copies of the Sacred Oracles, and what more we find doubted of and rejected by the Church. Such were those we to this day esteem Apocrypha. For, though St. Jerome says he had seen Ecclesiasticus, Tobit, and the First of Maccabees in the holy tongue, yet he brings them not into the canon, no more than Wisdom, Baruch, the additions to Esther and Daniel, which that learned Father would not meddle withal.

That the Book of Wisdom, attributed to Solomon, was composed by some Hellenistic Jew (probably Philo), in imitation of that wise king, is universally conjectured. Indeed, Ecclesiasticus is cited by Josephus against Appion,

as if it had been canonical; but it is plain that it has been since added to Josephus's text, and is not to be found in the ancient version of Ruffinus.

St. Jerome utterly rejects Baruch in his Preface to Jeremiah, as also Tobit, Judith; and the Books of the Maccabees are, by Eusebius, put in the rank of Josephus and Africanus. And, therefore, we are not to account them Divine; for that we sometimes (as was noted) find the Fathers, now and then, in their writings under a divine epithet, since it is evident Origen, St. Jerome, and St. Hilary, who cite them, enlist them among the Apocrypha, and, as Pope Gregory¹ acknowledges, were published only for the edification of the Church.

It is, indeed, pretended that the Maccabees, and some other of those books, were adopted into the canon by the Council of Carthage, about four hundred years after Christ; but this is a false report, nor had they any such character till the Council of Trent; and it is enough to read the two last verses of the second of Maccabees quite to uncanonize them.

There is a Latin version of St. Barnaby's Epistles, and a good part of the Greek original, believed to be his, as making use of the same passages which Clemens Alexandrinus, Origen, Eusebius, and St. Jerome cite; but we find it full of fables and allegories, not at all becoming the Apostolic spirit. The Liturgies of the Apostles are likewise rejected; and, indeed, those symbols and creeds, which pass under their names, although containing the most solid and material articles and rules of our faith, are only believed to have been composed by the Apostles; Ruffinus being the very first of the

¹ Gregor., l. 12, Moral.
fifth century who affirms it, yet but as a popular tradi-
tion. Of the same credit (for author) are their canons
and constitutions, as appears by the mention of temples,
catechumens, festival days, and some absurd and fabulous
things; as the permitting female slaves to be corrupted
by their masters, with the like.¹ For the Constitutions
are but of the third age, and have, from time to time,
been much changed, augmented, and corrupted.

But besides the Creeds attributed to the Apostles,
three more, namely, that of Aquileia, the Oriental, and
the Roman considerable differ; the Articles of Catholic
Church, Communion of Saints, and Eternal Life, being
left out and wanting.

Lastly, the Acts of the passion of St. Andrew are of
the same credit, and also the Books of the Sybils; it
being neither agreed on what their names or numbers
were. Those which the Fathers have cited were
thought only what some Christians have invented;
those good men not so critically sifting out matters as
other learned persons since have done, but taking much
on trust. Accordingly, they cited, now and then, Hys-
taspes, Trismegistus, and others of great name in those
early times; for it was hard to find when their prophe-
cies were written; nor indeed, made they much noise
before Antoninus's time.

I shall say nothing as to that passage in Josephus²
concerning our Blessed Saviour, it being yet thought a
pious fraud inserted.

Of the Book of the Pastor, called Hermas, a disciple
of the Apostles, we have already spoken, and it was re-
ceived by divers churches, and is cited both by Irenæus,

¹ L. 3, c. 1, and l. 8, c. 32. ² Antiq., l. 18., c. 4.
Origen, &c.; but, it being so full of visions, it has lost its credit. Let us, then, hear St. Augustine:  

"So dangerous is it in matters of religion hastily to believe every pretended spirit, and greedily to swallow whatever has the show of piety, without considering whether it be truth." Let those, then, who embrace the Council of Trent's decree, take heed lest they fall into this specious snare.

Wherefore, as to these books we have mentioned, and others of that rank, if they be not written by the dictate of the Holy Spirit, let us with Tertullian fear the woe denounced to such as shall offer to add to or detract from the Sacred Word, which St. Athanasius assures us are self-sufficient. Believe, says he, what is written; what is not, seek not. It is a manifest apostacy from the faith, and an argument of arrogancy, either to reject any of those things which are, or introduce such as are not written: *Ut discatis in verbis, supra id quod scriptum est, non sapere.*

In the mean time, we derogate nothing from any of those excellent Writings, recommended to be read to the Catechumens of old, both wisely and piously, as books which set forth (besides the historical part) the resurrection and happy state of the righteous after this life. And there are worthy lessons in the Books of

---

1 Non fit religio nostra in phantasmatis nostriis; melius est enim quaecunque verum, quam omne quicquid pro arbitrio fingi potest; melior est vera stipula, quam lux inani cogitacione prosuscipantis voluntate formata.—De Ver. Rel., c. 55.

5 See II. Macc., ii., 7; Esdras, iv., 41, 42.
Wisdom, Ecclesiasticus, and others, recommending the law of God to the Gentiles, and showing Atheists and persecutors of the saints that there is a state after death. So the Song of the Three Children, &c. All preparatory to usher in the Gospel, which more plainly taught those things, and refined the law.

The Jews (as we have noted) were by St. Augustine acknowledged the keepers of the Sacred Depositum, and that, certainly, with all imaginable care; not only before, but all along during, their captivity; at what time they settled in a deep resolution to detest all idols, and to teach and observe the law with all sincerity for the future.

There is a copy of Genesis in Sir Robert Cotton's library, thought to be of very great antiquity.

The Gospel of St. Matthew, and the Epistle to the Hebrews, were believed to be written in Hebrew for the Jews of the Circumcision; but it rather appears to have been in the Hierosolymitan Chaldee, as in the Targum, and only penned with the Hebrew character.

3. Editions.

The first editions of the Books of Scripture after Moses were doubtless that of Esdras, whom the Jews called the second Moses, and of the great Sanhedrim, after their return from Babylon. They collected the several books from several places, and reduced them into one entire volume, correcting what was amiss, and constituting the Canon of the Old Testament; and all by Divine authority, there being then amongst them

1 Capsarios Ecclesiæ.
2 [Since deposited in the British Museum.] 3 Alterum Mosem.
divers of the prophets surviving, as Haggai, Zacharias, Malachi, and, as some believe, Daniel himself.

This book had, besides, sundry other editions, after Christ's Ascension, as well by Jews as Christians. Of these the more celebrated was the Tiberius Masoreth, who added the points for the more easily reading the text, about A.D. 500. Since that, it has all been examined by divers famous Rabbins from several copies, though, indeed, we have few so ancient as the Greek, because, after the Masoreth critics and punctuation, the Jews esteemed no books that were not conformed to theirs; so that all others were neglected.

4. TRANSLATIONS.

Now, when the Gift of Tongues ceased, necessary for the first founding of the Church, holy and learned men began to translate the Scriptures into the vulgar languages, never intending to conceal their sacred knowledge from the people.

The very first and most famous was that of the Seventy, called the Septuagint. This it was, that almost all that followed, took for their original, as used not only by the most ancient Fathers, but by our Lord Jesus Christ Himself and the Apostles; albeit sometimes seeming to be different from the Hebrew text, as Irenæus proves.¹ The story of this renowned version is related by Aristæus, a Jew, and favourite of the Prince's. That Ptolemy² Philadelphus, sending a solemn

¹ Iren., 1. 3, c. 25.
² [B. C., 284. The richest prince of his age. During his reign, Alexandria was the asylum of learned men,—he greatly augmented the famous library there, which was afterwards destroyed by fire.]
embassy to Eleazar, the high priest, son of Onias, brother to Simon the Just, desired the high priest to send him a copy of the Holy Books, which he did, with seventy-two learned doctors, six of every tribe, skilful in both tongues, Hebrew and Greek. These, having a quiet place assigned them in a certain island near the city, finished the whole translation in seventy days, and, bringing their works to be compared, (for they all had their several cells apart) found a punctual agreement throughout, without the least difference, to a tittle. For which they were not only royally rewarded, and sent back with rich presents to the high priest, but had granted them the freedom of a hundred thousand Jewish slaves.

But this celebrated translation is thought to have been lost in the wars of Julius Caesar, when that glorious library was burnt, and in it seven hundred thousand volumes. Some yet affirm that the copy escaped the flames, and was to be seen at Serapio, in the time of St. Chrysostom. And, indeed, it is that Father who has named it the forerunner of Christ, to prepare for the reception of the Gospel by the Gentiles,—which was before a sealed fountain. And so envious grew the Jews afterwards, and so enraged at it, that the Heathen should be thereby brought into the Church, that they instituted a fast annually, to deplore the occasion of it. For this having been published 277 years before our Blessed Saviour's Incarnation, was, by the especial Providence of the Almighty, a preparatory to their more ready conversion; the Greek tongue being at that time almost the universal language.

The particulars of this story, though strongly con-
tested, is yet affirmed by Josephus, Philo, Tertullian, Cyprian, Eusebius, and St. Jerome, who lived much nearer those times than any who have since questioned it. Indeed, as to their translating a part in so many several cells, it is not very likely, since they must there have been furnished with as many several copies; whereas, we read of not above one which they brought with them, in great ceremony, from Jerusalem. Besides, the diversity of style shows no small discordance, and makes it rather probable that every one took his portion; and so, they might easily finish it within the time. And yet, though it differ in some words, it does not in sense. It is likewise questioned by some, whether they translated more than the Pentateuch, other Hellenistic Jews doing the rest. But neither of these is at all material, there being indeed many Jews about this time in Egypt and Alexandria, who enjoyed great privileges under the first Ptolemy, a lover of learning, whilst they neglected their own language for their affection to the Greek.

In the mean time, we do not insist upon Aristæus's credit for every circumstance of the story,¹ whilst the version is of that universal credit, as never to have been called in question, till the new Council of Trent damned it, and all other but their Vulgate, contrary to the suffrages of the most learned men even among themselves.

Indeed, as to antiquity, the Samaritan Pentateuch was brought them by those priests, who were sent to instruct those schismatics, after their being 'infested by

¹ Those who contradict Aristæus's story may consult the learned Joseph Scaliger, in his Notes upon Eusebius.
lions; and it is doubted whether that of the Seventy was the first version out of the Hebrew, or rather that of the Chaldean before Esdras. Nor is it unlikely that at least some part thereof might have been done before; since both poets and historians, even amongst the Heathen, mention so many things in their stories and fictions, which they could no where have learnt but from some of those Holy Books. So that from hence it is, that St. Cyril calls Plato and Aristotle thieves and robbers; but, as we formerly noted, they concealed their thefts, because the Jews were so despised a nation.

But to proceed with translations and editions, which were in Theodoret's time, as he affirms, almost innumerable. The next after the Greek might be the Syriac, (a tongue so near to the Hebrew as sometimes to be called Hebrew) not long since discovered, and of most excellent use by the universal suffrage of learned men, as being thought to be as ancient as the Apostles' time, before the Canon was settled; for it has not the Epistle of St. Peter, nor St. John's story of the adulteress, nor the Apocalypse. It is also held to come nearest the Original of any version, and therefore the most uncorrupted. It was likewise consecrated (as it were) by our Saviour and the Apostles, who preached in that tongue, and which, though at this day by the Turks introducing Arabic words, not so purely spoken in those countries, was then vernacular, and is yet used by all the Christians in sacred offices, and divers learned books on all subjects are still written in it.

There is, likewise, of the Oriental versions, that of the Arabic, and very ancient, it being even at this day
the most universal language in the whole world, as well as the most elegant and copious. They have not the Doxology, at the end of the Lord’s Prayer, which, being wont to be set in the margins, did, it seems, creep into the text. There are also left out the seventh and eighth verses of I. John, 5, which is likewise a mark of the antiquity of that translation; those verses being added (as is believed) after the condemnation of Arius, as found in very few copies before.

The Abyssinians and Ethiopians have had all the Holy Scriptures from the Seventy, which doubtless was delivered to them by the Apostles, after the conversion of the Eunuch by Philip. It was left out of our Walton’s Polyglott, because it could not be procured since the Queen of Sweden, who once had it, lost it out of her famous library.

The Persians have, moreover, the Holy Books in their tongue; but by whom translated is not known. The language is much corrupted from the ancient Persian; and what this was we are in the dark. Some of their words yet remain in the Book of Esther, Daniel, Nehemiah, Esdras.¹

In the mean while, the Pentateuch having been translated into that language by a Jew, out of the Hebrew, for the use of his countrymen among that nation, does wonderfully illustrate that passage of Jacob’s prophecy concerning the Messiah. We have a very ancient copy of the Gospels out of the Syriac text, which corroborates the esteem of that ancient version.

Other versions there were, as that of Aquila, a Jew (A. D. 128), Theodosian, and Symmachus, which the

¹ Wheelock published the Persian Gospel.
learned Origen disposed into his famous and elaborate Hexapla (called the Adamantine, for the pains he took in collecting them), adding a fifth and sixth, and so made it an Octapla. But the three first revolting from the Church to Judaism were soon rejected by it, and their versions happily lost, as being very corrupt; that, therefore, of the Septuagint has continued its esteem, as doubtless the very best; nor did the Greek Church use any other. It is confessed that it seems, in many places, to have paraphrased rather than actually and accurately translated, but so that neither our Blessed Saviour nor His Apostles ever altered it, citing any text; and it being translated long before our Lord's Incarnation, takes away all pretence of its having been interpolated by the Christians since. Besides, the Apocryphal Books omitted by them is a good evidence against their canonization, though, it must be confessed, that some of those pieces were not then extant.

Come we now to the Latin. And, first of the Vulgate, or Vetus, as thought almost as ancient as the Apostles' time; (and, indeed, how could they be without it, that language being so widely spread through all the Roman world?) translated from the Septuagint. Who was the author is not known. That also called the Itala was mended by St. Jerome out of the Hebrew. He indeed translated the Bible out of the Hebrew and Greek twice; of both which is the Vulgate now in use. And, though there is nothing in it against the Faith, yet never esteemed authentic, till they made it so at Trent. Nor do we refuse the Vulgate, but use and prefer it for its author, who was chiefly this learned Doctor. Not because that Council said he was divinely assisted
(whilst he arrogates no such thing himself), but because he follows the Hebrew text ad verbum,¹ where the Septuagint has rather paraphrased. This seeming somewhat to depreciate that renowned version, made his friend St. Augustine so concerned and angry, that, as not being qualified with that public authority, it was hardly at last, after many years, and a tacit consent, made public use of; and then the old version was laid by, till restored now again of late in this age of ours.²

St. Jerome's version, therefore, was but a private work, done at his famous Recess at Bethlehem, by the assistance of his Hebrew master, Barabanus. What he did upon the New Testament was but mending and comparing certain places with the Greek; what on the Old (as we showed), disliked at first, and not received till after his decease. And, indeed, though he made many Prologues and Apologies for attempting to put the Holy Books into Latin (it having been done so well in the Vulgate before), yet came his also to be called the Vulgar, for its after so frequent use.

Thus, after St. Jerome, were few or no more attempts; till about A. D. 1500, or 1600, Lyranus and Burgensis corrected, and Isodorus Clarus translated it; but not from the Hebrew text, till Pagninus, in 1623. After that, the Complutensian, being that of Nobilius, and, from the ancient text de novo, Sebastian Munster,

¹ See Esdras, xvi.
² Note, that the Psalms remained yet in the Vulgate, and are not St. Jerome's, but were left as he found them in the Vetus, because the people had them so perfectly by heart; and so, with the rest of those Books which the Jews received not into the Canon, he meddled not—a good argument against the Apocrypha.
Osiander, the elegant Castalio, the Tigurin, Vatablus, Junius, and some others.

But now comes Sextus Quintus, with his new edition of it, which he pronounces so exact, as made it anathema once to doubt of its perfection above all other. And yet, Clement the Seventh produces yet a new one, detecting the errors of his predecessors, and denouncing the same curse on those who did not submit to his translation, above all that went before; so as to leave the ancient Churches, who never had the Latin, nor have as yet, nor, if they had, do not understand it, in a sad condition. So charitable a Mother is the Roman Lady!

Besides the version mentioned, St. Jerome translated the Scriptures into the Dalmatian, his country's language; St. Chrysostom, into the Armenian; St. Augustine, into Punic; St. Cyril, or Methodius, into the Sclavonian; Ulphilus, into Gothic; Venerable Bede, into the Saxon; into the German, Melchior Adam; John, Bishop of Seville, into the Arabic; Jacobus de Voragine, into the old Italian; Leopoldus, into the Polish; into old French, Charles the Fifth, their king.

Of later days, the Doctors at Douay published their Bible, with a Comment full of trash. Erasmus, the Greek Testament.

Amongst the Protestants, the most received was that of Tremelins, a converted Jew, compared with the Hebrew text, and that of Junius. But the most elegant New Testament, that of Theodore Beza, carries the voice among the foreign Reformed Churches, who yet is thought sometimes to have taken too great liberty, as in St. Luke, ix., 48, 53, and I. Cor., xv., 55.
Since these, there are, in the vulgar tongues, that of John Diodati, in Italian, whose both translation and notes, upon the difficult places, are worthily esteemed; as is also the paraphrase of our learned and pious Dr. Hammond.

There was an old translation into English, done by the holy martyr Tyndal; and, in Queen Elizabeth's time, another after the Genoa Bible, with Notes and ample Concordance. But that which was afterwards published and reformed, by command of King James the First, is thought to be one of the very best of the modern, yet capable of improvement. There is one of nearly four hundred years since, extant in the St. James's Library.

I think most of the Bible and all the New Testament has been translated very elegantly by the Jansenists, into French, called the Testament Port-Royal.

It has also been translated into Welsh, or ancient Gaul, by order of our pious princes, and into Irish and Turkish, by Mr. Seaman. And thus went out their sound into all the world.

Now, as touching the several editions, briefly: the Venetian is the Aldine. Another is the Roman, from the Vatican copy, a very ancient MS., by Cardinal Caraffa, which is much esteemed.

Jay published his pompous Paris Edition, the very worst of all, and most expensive.

Lastly, that of the learned and laborious Dr. Walton, late Bishop of Chester, from the Alexandrian Manuscript, sent by Sir Thomas Roe to the blessed martyr, King Charles the First, from Cyril Leucaris, who brought it from Alexandria, when he was translated
thence Patriarch to Constantinople, and is now in his Majesty's library at St. James's;¹ all written in capitals, upon parchment, without distinction of chapter, verse, or even words, excepting now and then a section. This speaks it of very great antiquity; and it is said to have been written by Tecla, a noble lady, about 1300 years since, or a little after the first Nicene Council, altogether equal, if not superior, to that so celebrated one of the Vatican.

But, first I should have mentioned the Hebrew text, with the Masorite punctuation and Latin version verbatim. Then the Samaritan Pentateuch, in the ancient Hebrew character, common both to Jews and Samaritans, before Esdras altered it for the Chaldee, because the long-captived Jews had forgotten their own language. Then is placed the Septuagint, and, next it, the above-mentioned Tecla's. After this, the Vetus Vulgate, in Latin, from the Seventy, promiscuously used (as we have shown) with St. Jerome's, till Gregory the Great; from both which sprung the Vulgate Hodierna, corrected by Popes Sextus V. and Clement VIII.

Then follows the Chaldee paraphrase, the Hierosolymitan Pentateuch; that of Jonathan and the Persian paraphrase; the Ethiopic Psalter, and New Testament; the Syriac version of the Old Testament; the Arabic and Greek of Robert Stephens; all interlined with the Latin, and so accommodated as, at one view, one is master of them all, to the wonderful ease of the reader. In this the painful compiler has outdone the

¹ [This extensive and costly library of MSS. was transferred, as a gift to the public, to the British Museum, by the munificence of George II.]
famous attempt of the learned Origen's *Octapla*; and all that have come after to this day.

---

**SECTION IV.**

**1. INTERPRETATION OF SCRIPTURE.**

The consent of all these laborious and famous versions, which is admirable, considering the several dialects, idioms, phrases, and other innumerable circumstances, is an undeniable argument of the truth in all necessaries to salvation. And this, notwithstanding all those various lections, whose differences are only in more minute points, almost impossible to have been avoided in so many translations and transcribers, whom God did not think fit to make infallible; in order to excite the study and diligence of the faithful, by preserving copies, comparing and searching the Scriptures, whilst the sense and text remained entire which most concerned them; so that all Morini's and Simon's objections fall to the ground. The learned Louis Capellus¹ shows how these divers readings have, by a wonderful Providence, preserved rather the Holy text, in such places as are most important; and many great and pious Divines, instead of impediments, have found them helps; whilst in any difficulty they have recourse to the analogy of faith, ancient versions, writings of the Fathers, and the like collations for that reading which consents with antecedent, consequent, and parallel places, with the argument of other copies, &c.

Besides, the certainty of the text may be gathered by any of the novel helps of points and accents, as it is

---

¹ Capell. Crit. Sacra, l. vi., c. 5.
both in the Syrian, Arabian, Persian, &c., and in cases of ambiguity, by the help above-said. For, as to that of Cainan's slipping into the text of Luke, in our Saviour's genealogy, it is likely it was from the imper- tinence of the transcriber, who, seeing it in the margin, put it into the text; for ancient copies have it not.¹ This being so, we are not concerned at the cavils of Rushworth, who, in his Dialogues, would invalidate the Holy Scriptures, to advance his tradition; upon evidence (as he pretends it) of common sense, that they, being so full of doubts as to the genuine translations and transcripts even of the Originals, filled with such numberless errata, and men's skill in those languages being so imperfect; with other prejudices of that sort, it seemed as evident to common sense that the Scriptures produceno distinct resolution of controversy, though otherwise indeed useful for instruction in virtue, and so tending to discover the truth in matters of faith in gross only; and being read rather to know what is in it than to judge by it; but expecting from tradition what is definite and certain, and so maintain the infalli-bility of the present Roman Church.²

To this is answered that, if such uncertainty be in either original or version,³ then are we as uncertain whether ever God made any such covenant as we read of with Abraham, or gave Moses such a law, or at all spake so by the Prophets. For, according to these, all this is uncertain; and so is let in a place for Atheists, which already believe nothing of this.

¹ See Sparnheim, in his Dub. Evangel. Disput.
² To the same sense, the late Richard Simon, in his “Critical Hist. of Old and New Testament.” ³ Mr. Thorndike.
If the Scriptures deceive us, which are written Records, how much more obnoxious are we to oral tradition! If there be such difficulties in expression of our minds, when we deliberate about what we write, how much more subject are we to mistake in speaking! Verbal reports we experimentally find so very inconstant and apt to err, and misrepresent things, done even in our own time and very neighbourhood, either by concealing the truth of narrations, or adding to them; and of this, indeed, common sense is a proper judge. Nay, why (if this be otherwise) do men take such wondrous care about their deeds and legal evidences, which concern their temporal estates only, if writing be not more certain and less apt to err than words? Wherefore, whatsoever is taught in Christianity is to be proved by Scripture, whether tradition or laws of the Church, though the evidence may depend on common sense.

Now, whatever can be pretended to come from the Apostles must first have been delivered by them in the Hebrew or Syriac; at least, in that language they spake, and which was so very near the Hebrew of the Old Testament, that in the New it is called by that name. From this being translated into Greek or Latin, it must have come afterwards into the now modern and vulgar languages. Now, can the meaning of the Apostles' words be more certain than the meaning of the written word? Let common sense judge. And if this be not so, to what purpose were the Israelites enjoined to read and teach them to their children in the written law? Why did Christ our Lord bid us search the Scriptures? Why are the Bereans so celebrated
for doing it, to find the truth of what was preached to them? In a word, wherefore is Dives sent to Moses and the Prophets? And why is it said that "all things written in Scripture are for our learning that, through patience and comfort of the Scripture, we might have hope?" and that all Scripture, inspired by God, is profitable for so many occasions? And, lastly, wherefore did the Fathers, who wrote so many volumes against the heretics, allege Scripture continually against them? Shall we say they had not common sense? It is a monstrous assertion, that nothing but probable truths can be made out by Scripture; peremptory and infallible ones by tradition.

Then, as for Copies. It is very rare that the same error falls out in most Copies; and, if not, then is there little danger of perverting the sense, there being so many Copies to correct the peccant. In sum, unless it be what the Socinian takes hold of from three or four questionable texts about the Holy Trinity, in other matters (notwithstanding the divers readings so much talked of), there are none of any consequence, there being evidence besides sufficient to preponderate all that seems to interrupt.

Then, as to Languages. Certainly, those who spake those learned tongues understood what they spake, and heard others speak or write. The Books having been preserved so carefully among the Jews some ages even after Christ's Ascension, and how capable of expressing any the most abstruse matter, let what Maimonides has written convince the doubter.

As for the Greek, the writings of the Apostles and citations of our Blessed Saviour sufficiently manifest
that the versions were agreeable even in the most difficult places of the Old Testament. Add to this the translations of the Scriptures into so many languages from the original, preventing the errors in the Copies, and fixes the true reading, as the comparing of them does their meaning and genuine sense. There have, indeed, been attempts, from time to time, to corrupt the Copies of the Holy Scriptures, to make them speak to the sense of men's opinions; some by inserting words and periods, others by paraphrase, and some again pretending to put them into better Greek. Of this an instance is in that MS. (Greek and Latin), given by Beza to the University of Cambridge. Of which he says, Tantam in Luce præsertim Evangelio repertam esse, inter hunc Codicem et ceteros quantumvis viteres, discrepantium, ut, vitandum quorumdam offensionis asseverandum, potiusquam publicandum existimavit. But, since these petulancies have little or no effect as to the sincerity of faith, and that there remain so many other incontestable helps to discern the true reading, we shall need say no more upon this article.

We have further, for assistance of reading and understanding of difficulties, (besides the many modern helps) the Paraphrastical version, in the Chaldean tongue, which was written about the time of Jonathan and Onkelos, and which the Jews esteemed so sacred, that they reported that, if but a silly fly lighted upon it, it was immediately consumed by fire from heaven, with other wondrous stories. However this be even idolized, the Targum of Inachar is of great use, as being written before our Saviour's time, who, according with it, cited that of the twenty-second Psalm. It likewise attri-
butes creation to the Word, as to a distinct person, and as often mention of the Messiah coming, to be born of a Virgin. It is written in the Chaldæo-Syriac, which was (as it is said) the vernacular of our Lord; the pure Hebrew having long before been corrupted in the captivity.

It is very true that the Hebrew tongue, having very few, that is to say, about 1022 roots, the rest being derivative, occasions the using of the same words to express several things, and may, now and then, occasion mistake. But this, happening chiefly in the appellation of things, makes little to the prejudice of the main; the names of plants, stones, animals, colours, habits, &c., the Hebrews had but few of those known to us. And so of proper names hard to turn into other languages, as Chaffai (Heb.), Eve in Greek; Tor for Tyrus; and divers things are expressed by tropes and figures, as God's appearances, angels, &c. Abraham, Isaac, and Jacob, are put for the whole Israelitish people. The words rendered "for ever and ever" do not always signify absolute duration. Sometimes, the whole is by Synecdoche put for the part, as when Christ is said to be three days in the grave; whereas, it was but one whole day, namely, Saturday, and part of Friday and Sunday. Blood is also often used for homicide. And, in the Prophetic style, time and times, and half a time, for three years and a half. The river for Euphrates; Babylon for Rome; salt, by metaphor, for incorruption. Frequent ironies occur, as in the third

1 There are various acceptations of the word spirit, &c., about which Spinosa heaps so many instances to little purpose, besides ostentation of being skilled in the Hebrew.
of Genesis; and the last of the twenty-first of John's Gospel is spoken by hyperbole. Vessel is put for the body; horn for power; the rock for Christ and the Church. Women and daughters for cities and countries. Hypallage, He set his tabernacle in the sun; and by Anthropopathia, the members and senses of men.

Sometimes, again, symbols, hieroglyphics, &c., are made use of; but, whilst taking and observing these rules, the genuine sense is no way difficult in material points. For, where the words of Holy Scripture may properly be understood without wrestling, we are to take them as they lie before us, without trope or figure, but natural construction; unless, by doing so, any absurdity follow, which is easily perceived. If any obscurer passage be met with, we shall find it as plain, and in some more perspicuous, and then take the latter. Magnificè (says St. Augustine) et salubriter Spiritus Sanctus ita Scripturas modificavit, ut locis apertioribus fami occurreret, obscurioribus fastigia detegeret. Nihil enim ferè de illis obscuritatibus eruitur, quod non planissimè dictum alibi reperiatur. To the same sense Clemens: "There is no darkness in the Word."

To this so universal are the voices of the Fathers as would fill a volume to repeat, showing how plain they are to the very ignorant; and yet, how mysterious soever, discoverable to those who studiously mind them. "The Holy Scriptures declare all things clearly," says

1 "Behold, the man is become one of us, to know good and evil, and now, lest he put forth his hand, and take also of the tree of life, and eat and live for ever:" ver. 22.

3 Clem. in Protrept.

4 Λί άγιαι γρύφαι πάντα σεφως διαλέγονται.
Athanasius, speaking of the Deity of the Holy Ghost. And to the same purpose Epiphanius, and many others. What, then, can more encourage us to the searching of those Scriptures, in which lie the treasures of eternal life?

But to proceed with the rest of those rules, which holy and exercised men have recommended for direction of the greater difficulties, "things hard to be understood;" and of such there are not a few. In obscure passages, we take the minimum, as uncertain how much is meant; for, if it mean the most, it is certain that the least is included in it. In ambiguities, it is safest to take both senses; and, in controversies, where strong arguments are produced for both opinions, to follow that which includes the most, lest the truth escape us.

The Thomists and Monks fancy, as if every individual text had an exposition analogical, historical, and moral, a mere Jewish fancy. Where, therefore, Scriptures are dubious, and have a latitude, though we misunderstand them, it is no crime, provided we do our best not to be deceived. For our understandings are not free, as are our wills; and this is a solid argument to me, that if our Blessed Lord had laid such stress (as too many now do upon such things), and had constituted an infallible understanding, an indispensable condition of our salvation, He who bore that infinite love to mankind would never have left things necessary to salvation obscure and dubious, much less insuperable, His only design being to save those who believed in Him. Nor will a single error, not contracted through our own fault, destroy us. God will, questionless, allow and make abatement for natural and invincible
infirmities, and other circumstances of constitution, education, &c., by which any may be fatally inclined to such and such persuasion. Nor will He suffer any pious person, who humbly and devoutly seeks to know His will, and resolves to live thereafter, to perish for want of sufficient direction to do his duty, though there may be many places of which he does not attain the true meaning, and which yet are necessary to be known upon other occasions and purposes, at one time or other, by those who are more enlightened. He who seeks the Scripture, with all the faith of the Church for his rule, shall find the truth; understanding by this faith what he was taught at his baptism and after-instruction, as motives of his faith.

But we are yet farther to mark likewise the scope, intention, and coherence of the authors; since bare Scripture-letter is not the word of God, but the sense and meaning of the Scripture. Wherefore, places are to be compared according to analogy of faith, universal tradition (I say universal, according to Lirinensis' comprehension) with what Councils have established, Fathers, pious and learned men have written, but by no means, and for reverence to any of these, taking any sense in opposition to any Article of the Creed, by all the ancients called the rule and standard of faith.

With this caution we are also to enquire at the priest's lips; for no prophecy is of private interpretation. To this add, skill in the original tongues and idioms, with all other moral helps. For the interpretation of Holy Scriptures, how evident soever, is certainly a great mystery, considered as to its end. We

1 Mal., ii., 7; II. Pet., i., 20.
should, therefore, address ourselves with great modesty and veneration, imploring assistance from the Lamb of the tribe of Judah, who opens and no man shuts, and shuts, and no man opens; even He who has the Key of David, the Son of David, Christ the Word Himself. Besides, the greatest difficulties lie in the Old Testament, which is rather a sealed book, than the New. And yet, through the great and extraordinary care of the Jews, the variety of readings were not nearly so many, or material, as those in the New. But then, neither are we without mighty helps from the most learned Commentators, amongst whom the incomparable Grotius has deserved the highest esteem of the Church, and may indeed serve instar omnium.

Now, when we say all things necessary to salvation are (after all these difficulties, and qualifications to their right understanding) plain in Scripture, it is not meant as if all were evident by the plain and literal words of the text only, which is necessary for every Christian to believe, without any other help; or that an extraordinary spirit directed, without first believing all things necessary to salvation; but that there is any danger in not conceiving alike of all things in Scripture; but the not believing all things true from its Author. Since there are many things in Scripture, which are not Articles of Faith; and though it be necessary to salvation to believe all

1 As from these texts: Deut., iv., 2, 29; Rev., xi., 18, 19; Gal. i., 8, 9; John, xx., 30, 31; Ps., xix., cxix.; Isa., lix., 12, 13; Jer., xxxi., 32; Matt., xi., 28, 29; John, i., 14, &c. Besides that famous passage of the Father: In eis quae apertè in Scripturis posita sunt, inveniuntur illa omnia, quæ continent fidem, mores vivendi; as intending and persuading to sanctify of life. (Aug. De Doct. Christ. ii., c. 9.) And so, in St. Chrysostom. Hom., iii., ad II. Thess.
that the Scripture says, to be true, yet it is not necessary to know all the Scripture contains. Origen (in Levit., Hom., 5) shows, that some things there are in Scripture, reserved to the knowledge of God alone; nay, says Irenæus (ii., 47) even for the world to come, that men may always learn, and God may teach. In the mean time, true believers have the Spirit of God, by which they try and examine what things and interpretations agree with, or dissent from, the common Christianity.

This is the Unction from above mentioned by St John, not because the gifts of the Holy Ghost impart a promise of understanding all truths, but because it supposes the knowledge of what is necessary to salvation, namely, the common Christianity. That extraordinary grace which the Apostles had of expounding Scripture, and which Justin Martyr¹ affirms, continued in the Church to his time, was imparted on consideration of their professing the faith of Christ; and tended only to discover those grounds, on which the Church still proceeds, in the use of ordinary reason, to expound the Word, that is, besides the letter of the text, the universal consent of the Church. Thus the author² of the Commonitorium confesses the Canon of Scripture to be every way perfect, and sufficient, with the tradition of the Church, for the understanding of it. And yet, though a man may be obliged to believe that which is not in the Scripture to have been instituted even by the Apostles, yet he is not obliged to observe it, but upon that reason which Scripture delivers. Nor is it necessary, as some pretend of late, that we have express

¹ Dialog. Tryph. ² Vincent. Lyrinens's.
Scripture for every thing we do or speak,¹ but that the reason of all we do and say be derived from the doctrine which the Scripture declares. All is plain in Scripture, supposing the rule of faith received from the Church to limit the sense and exposition of it; as in the Doctrine of the Trinity, Christ's Real Presence in the Sacrament, &c. We must carry ever the faith of the Church with us, and then we cannot err. Scriptures are hidden to them, who neglect this rule; whence that of Origen:² "the ignorant profit by reading Scripture, after they are initiated, catechized, and instructed in the faith beforehand;" for so they were at baptism.

There is nothing necessary to salvation in Scripture, but what may be manifest by the use and application of such means as the Scripture directs; for, otherwise, that which should dissolve all doubts ought itself to be most clear, which we see it is not; nor were all the Scriptures written when St. Paul³ alleged that, being inspired by God, it was profitable to qualify the man of God to preach Christianity to others; divers parts of the New Testament being not then penned; and St. John anathematizes those who should falsify or corrupt any part of the Scripture or the sense of it. But the Apostle's meaning was, that there was in the Old Testament then extant what shadowed and typified the New, the right understanding whereof directed to the understanding of the Gospel; and, consequently, furnishing the man of God to propagate it. And thus did our Blessed Savour mean, when he

¹ Omne quod loquimur, debemus affirmare ex Scripturis Sanctis. St. Jerome, in Psalm. 98.
² Contra Celsum.
³ II. Tim., iii., 16, 17.
opened the understandings of His disciples, (after his resurrection) that they might comprehend the Scriptures; and by these books did the Bereans compare and examine the doctrine they taught.

It is certainly sufficient, and of God's infinite goodness, says the learned Thorndyke, and agreeable to those means whereby He convinces the world of the truth of that religion we contend for, that He gives those whom it concerns such means to discern the truth of things as, being rightly applied, are of themselves enough to create a resolution as certain as the weight of any controversy shall require. For such is the Scripture, containing the sense of it, within those bounds, which the rule of faith and the laws given the Church by our Lord and His Apostles do limit. For what is plainer than to discern what the whole body of the Church has agreed in? what not? What is manifestly consequent to the same? what not? What is agreeable to the ground and end of those laws, which the Church first received from our Lord and His Apostles? what not?

That no interpretation of the Scriptures, repugnant to the consent of the Fathers, ought to be alleged, is a prudent injunction, which, had it been observed (I mean, the Fathers of the five first centuries) well had it been for all the Church and the Christian world; the infallibility pretended by the present Roman, and traditions of the Universal Church being infinitely wide and inconsistent with Scripture; as, on the other side, the trying by Scripture alone, without bringing the consent of all the Catholic Church into consequence. Witness the Socinian.
With these directions, cautions, and limitations, are the Scriptures truly *self-sufficient,*¹ (as St. Athanasius calls them) as to necessaries to salvation, not as always needing all those helps, but corroborated by them. For, as to the rules of faith, what can Fathers, what Councils do, or any other aid, than determine that, expressly and distinctly, which has been simply held and asserted from the beginning?

2. RULE OF FAITH.

Now the principal end of man being his eternal felicity, and, consequently, to know and rightly understand the proper means to attain that end, infinitely it concerns us to inquire it out. And, though all Christians acknowledge that the law and service of the Almighty God, laid down and revealed in Scripture, is that means; yet are many learned and other zealous men not agreed how to understand and interpret it, partly through pride of their own opinion and other human prejudices;² I say, these prejudices and disagreements cast away many holy and excellent persons in great difficulties and doubts, to the great disturbance of the world, and ruin of one of the most necessary graces—Christian Charity.

To come to a steady resolution, then, and acquiescence in this particular, after all we have hitherto said, and with which we shall conclude this tedious though important Chapter, will best be done, by inquiring, once

¹ Αὐτάρκεια. Orat. ad Gent.
² An instance of this we have in Maldonat, (a Spanish Jesuit) who, though highly approving an explanation, confessed indeed it was the very best, but, because it was Calvin's, he would reject it.
for all, which is the Rule of Faith, and whether there is any more moral certitude of such a thing. By Rule of Faith, we mean all the Articles or Doctrines of the Christian Faith, necessary to salvation.

Papists will have it in a General Council, confirmed by the Pope, defining what the rule is; some in the Council alone, some in the Pope; some in oral tradition, or living voice of the Church: all these without dependence on Scripture. Further, that, this being the ground and foundation, these are the interpreters and definers to conclude and declare the meaning and sense of the infallibility, by promise of the Holy Ghost's assistance.

To this we find, in the first place, that a General Council confirmed by Popes have erred in faith; therefore, that cannot be the Rule of Faith; for Popes have been heretics, and have taught heresy, by Papists' own confession, Gratian, Gerson, and Bellarmine himself. Now, though some affirm that the Pope cannot err as universal pastor, yet we know he can, and has erred; and the Catholic Church was confirmed in all necessary truths, hundreds of years before any General Council was.

To the second: That a free General Council, without the Pope, by their skill in theology and scholastical learning, may define this rule without erring is uncertain; because still they can, by all they know, only do their best endeavour, there being no certain evident revelation that they are in the right, farther than probability. For though the Holy Spirit's assistance is promised in the due use of the means, yet, unless they certainly know they have rightly made use of that
means, they cannot be infallible. Now, to know that is impossible, unless the means made use of do evidently discover it, for whatever is not the pure word is fallacious.

To the third: Oral tradition, which Papists affirm to have been ever the same, down to our age, without interruption, so that these, finding the infirmity of the two former, build on this as the surest footing. This is but a late assertion, and therefore cannot be the rule, seeing it was not always so believed so to be, but one of the two above, and therefore had interruption, as in the Arian heresy. The Council of Trent also did not rely upon it, wherein saintly and apostolical tradition are contradistinguished. And, besides, it is known abundantly, divers of the new articles of faith, purgatory, transubstantiation, &c., had their beginning but of late, and were not delivered as such articles. So that, after all, the Rule of Faith is certainly the Holy Scripture only, as being clear in all things necessary to all illuminated Christians. Others there be who hold that all these truths are evident to every understanding; so that, according to both, Holy Scripture is still the rule.

Now, the former made use of tradition as historically asserting them to be the Books of Scripture, not upon account of tradition, but for its own cause, safe light, and spirituality. The enthusiasts hold Divine inspiration their guide for interpreting them; others, the light within them, as independent of Scripture, and so pretend what they please, but without any miracle to confirm it, as the Apostles had: so that these new guides cannot exclude a former established Divine law,

\[1\] Decree I, Sess. 4.
as did our Blessed Saviour, when he abrogated that of Moses.

As to those who affirm the rule and necessary fundamentals of faith evident to every understanding explicitly, it is very unlikely that mechanics, labourers, women, &c., though they can read, should arrive at it without the Church's sense; since, if otherwise, many heresies would be maintained by Scripture. Some, then, were undoubtedly entrusted to show their meaning, weigh the circumstances of every place, compare places, distinguish what are most material truths, and what opposite, and thence to draw inferences.

The result of all appears, then, to be this: the Church Catholic diffusive cannot err in fundamentals; but she cannot immediately declare her thoughts to every particular individual member, as to what she holds points of Faith, deducible from Scripture; but, by employing her pastors and ministers, either by letter, writing, or votes in council, to make it known to every person. Now, such places of Scripture are as plainly to be understood as they are in any such teaching, writing, or definition of council; such may be as certainly learned out of Scripture as by the traditions of the Church; and those traditions and definitions, being compared with Scripture, appearing plainly to be the meaning, are then indeed, and not till then, to be embraced as the true meaning.

If oral tradition can be made plain to be truth by parallel texts of Scripture, tradition in that case is good. But, when no testimonies aver the same thing, if one be of divine, the other of human authority, the former ought to have pre-eminence. Seeing, then, the
testimony of Scripture is divine (as being confessed the Word of God), and tradition but human, as delivered in various expressions of pastors, parents, tutors, masters of families, nurses, &c., it is most reasonable Faith should be resolved into Scripture, as its rule, and not tradition. Nay, though tradition may, perhaps, in some things be thought more plain than Scripture (as in explaining that of Christ's Divinity in the Nicene Creed), yet should Scripture still be esteemed the text, and tradition but its best comment. And so, doubtless, the disciples of the Apostles, after the New Testament was published, did confirm what they had been taught orally by the Apostles, out of the Written Word; because the sayings of Christ himself and divinely inspired Apostles must needs be thought of greater authority than their own, though believed ever so certainly true by those they taught.

From all these premises we then conclude, the Holy Scripture, that is, such places as contain necessary points for belief and practice, is the true and only true Rule of Faith; yet so as that, without the help of tradition, it cannot be known to be the Word of God uncorrupt; nor those necessarily manifest so to be, without a continued miracle and immediate revelation. For, were it otherwise, every body would have understood it, and held it, even before the Scripture was written in the several languages of the people, who yet became good Christians. Nor could ignorant and unlettered persons read, and know assuredly it was rightly translated and uncorrupt, nor have judgment to select and cull out those which were fundamental from other texts less necessary. Wherefore, of necessity, they
must fly to and trust other men qualified, namely, to the *Ecclesia Docens*, which are the Bishops, pastors, and spiritual guides, to whom the *Depositum* is entrusted, yet not but that the laity may and must search the Scriptures, to encourage and edify, so as they oppose not their judgment to that of their teachers, whose office and calling it is, and who have studied all those qualifications required to fit them, and are called to the unction by mission successively derived from Christ and His Apostles, and are acquainted with whatever has all along been the faith of the Christian Church to this day; especially considering that God has, in the economy of the world, provided and placed men, skilled and expert in several things, without which all would turn to disorder and confusion. Wherefore, we conclude, with St. Augustine,¹ *Scriptura doctrinae nostræ regulam figit*; or that, rather, of its Blessed Author: "This is my Beloved Son, in whom I am well pleased: hear ye Him."²

Thus have we all that a rational man can modestly, or even immodestly, require for the truth that any history is capable of, both internally, from the nature of credibility and sensibility of the objects, knowledge, and integrity of the writers, eye-witnesses; the way, manner, and style of writing; and, externally, from its reception and entertainment in the world, universal consent and concurrence, and that even of strangers as others; nay, even the confessions of adversaries, the testimony of prophecies, miracles, preservation, harmony, sublime matter and effects; antiquity, tradition, and all those other topics we have produced. These

¹ De bono Viduitatis. ² See Matt., xvii., 5.
have asserted the books, copies, versions, and interpretations of Holy Scripture to be the Word of God, and derivable from it; I say, so asserted, as no other history in the world has ever showed the like, to justify any matter of fact whatsoever. The sum, then, of all this is, that God would have the mysteries of our salvation and holy faith conveyed to us by writing, after the Apostles had now immediately preached them; and both these in a time when they could not be supposed to be corrupted, whilst they were received by infinite numbers of proselytes; cited by a cloud of witnesses, learned Fathers, and Doctors; preserved in a thousand places, wherever the persecutions had driven the professors. They write, as they speak, with all plainness; and the Greek version was known and used by all, without criticizing, or defect found, or blamed by the Apostles, nay, or by our Blessed Saviour himself; they having more regard to what the Scripture taught and proved, than to the placing of words or manner of expression. And it is a mercy and signal Providence that, for all those cavils and pretences that difficult men contend so much about, there are so few to the number of the places which contain the fundamental truths and rules necessary to salvation. They left, in the mean time, the composing of the canon to their disciples, not as containing perhaps all that the Apostles might write, but as much as was necessary; and, for the various readings, it is apparent they change nothing material to its prejudice; the substance of our religion and rule of faith being so effectually twisted and interwoven, through all the Sacred Volumes, as is sufficient to characterize them the pure and undoubted
word of God; and that, above all other writings, they are to sanctify the hearts of those who meditate on them, and to dispose us to all manner of virtue and holy living.

It is not, therefore, from the decrees of Popes and determination of Councils, or the dictate of private spirits, (with the enthusiasts) or interpretations, nor the laws and edicts of Princes (which our Esprits forts, mere pretenders to reason and philosophy, would maintain, and are the engines by which sectaries have prevailed, to impose upon the world, both in former days and now of late in ours) whereby the Scriptures are proved to be the only truth divinely inspired, and to be embraced; but by the force and cogency of the reasons and arguments we have alleged, accompanied with the most authentic human testimony that was ever yet produced, which compels us to assent that the Canonical Books of Scripture are the undoubted Oracles of God; the pillar and ground of our faith.¹

It was, therefore, most highly important and needful to weigh and well consider this matter; since upon this ground and pillar the whole superstructure stands; and upon the strength of which we adventure the eternal interest of our most precious souls.

¹ I. Tim., iii., 15.

END OF VOL. I.
NEW EDITION OF EVELYN'S DIARY.

Now in course of publication, in 4 vols., post 8vo., price 10s. 6d. each, with Illustrations,

DIARY AND CORRESPONDENCE OF

JOHN EVELYN, F.R.S.

AUTHOR OF "THE HISTORY OF RELIGION," "SYLVA," ETC.

A New Edition, Revised and Enlarged, with numerous Additional Notes, UNIFORM WITH THE NEW EDITION OF PEPYS' DIARY.

The First Two Volumes, comprising "The Diary," are now ready.

The Diary and Correspondence of John Evelyn has long been regarded as an invaluable record of opinions and events, as well as the most interesting exposition we possess of the manners, taste, learning, and religion of this country, during the latter half of the seventeenth century. The Diary comprises observations on the politics, literature, and science of his age, during his travels in France and Italy; his residence in England towards the latter part of the Protectorate, and his connexion with the Courts of Charles II. and the two subsequent reigns, interspersed with a vast number of original anecdotes of the most celebrated persons of that period. To the Diary is subjoined the Correspondence of Evelyn with many of his distinguished contemporaries; also Original Letters from Sir Edward Nicholas, private secretary to King Charles I., during some important periods of that reign, with the King's answers; and numerous letters from Sir Edward Hyde (Lord Clarendon) to Sir Edward Nicholas, and to Sir Richard Brown, Ambassador to France, during the exile of the British Court.

A New Edition of this interesting work having been long demanded, the greatest pains have been taken to render it as complete as possible, by a careful re-examination of the original Manuscript, and by illustrating it with such annotations as will make the reader more conversant with the numerous subjects referred to by the Diarist.

"It has been justly observed that as long as Virtue and Science hold their abode in this island, the memory of Evelyn will be held in the utmost veneration. Indeed, no change of fashion, no alteration of taste, no revolution of science, have impaired, nor can impair, his celebrity. The youth who looks forward to an inheritance which he is under no temptation to increase, will do well to bear the example of Evelyn in his mind, as containing nothing but what is imitable, and nothing but what is good. All persons, indeed, may find in his character something for imitation, but for an English gentlemen he is the perfect model."—Quarterly Review.
CRITICAL OPINIONS
ON
THE NEW EDITION OF EVELYN'S DIARY.

"We rejoice to welcome this beautiful and compact edition of Evelyn. It is intended as a companion to the recent edition of Pepys, and presents many similar claims to interest and notice. Evelyn was greatly above the vast majority of his contemporaries, and the Diary which records the incidents in his long life, extending over the greater part of a century, is deservedly esteemed one of the most interesting books in the language. He took part in the breaking out of the civil war against Charles I., and he lived to see William of Orange ascend the throne. Through the days of Strafford and Laud, to those of Sancroft and Ken, he was the steady friend of moderation and peace in the English Church. He interceded alike for the royalist and the regicide; he was the correspondent of Cowley, the patron of Jeremy Taylor, the associate and fellow-student of Boyle; and over all the interval between Vandyke and Kneller, between the youth of Milton and the old age of Dryden, poetry and the arts found him an intelligent adviser, and a cordial friend. There are, on the whole, very few men of whom England has more reason to be proud. He stands among the first in the list of Gentlemen. We heartily commend so good an edition of this English classic."—Examiner.

"This work, in its present form, is a necessary companion to the popular histories of our country, to Hume, Hallam, Macaulay, and Lingard. Its elevation to the book-shelf, as among the best Diaries and Correspondences in our language, cannot but adorn every library, no matter how fastidiously selected. The cheapness of this re-issue is as remarkable as its beauty and compactness."—Sun.

"No library can be complete without this standard work, which gives so complete a picture of the manner of life in England through the most stirring times of the 17th century."—Globe.

"Uniform with the recent edition of Pepys, this interesting and important work of the learned and courtly Evelyn will be a valuable addition to every library."—Post.

"The new edition of this valuable book will meet with a warm welcome from the public. It is likely to be now read by thousands, to whom the first editions have never been accessible. The journal of John Evelyn commences in the year 1641, and is continued till his death in 1705-6. Thus we have a copious and faithful record of the habits, occupations, and reflections of this remarkable man, during a period of one of the most eventful and important to be found in our history. It is impossible to overrate the interest and value of a Diary or Correspondence written in such times as those of King Charles I., Oliver Cromwell, King Charles II., King James II., and King William, by one who observed accurately everything that passed around him, whether engaged in his capacity as a public officer, or tasting the varied pleasures of private life and intercourse; who knew nearly all parties—actors in those busy days and stirring scenes—whether monarchs, ministers, or other eminent men."—Weekly Chronicle.

"The present edition of this popular and important production is much more valuable than any of its predecessors. Evelyn's Diary, as a fund of amusement, is one of the most remarkable books in the language—as a source of information which cannot be met with in history, it is one of the most valuable."—Observer.

"The present is a very elegant edition of this valuable work—so full of curious and animated pictures of the occurrences, the manners, the political sentiments, the social customs, and occupations of the time."—Britannia.

HENRY COLBURN, PUBLISHER,
13, GREAT MARLBOROUGH STREET.
THE NEW WORK ON NINEVEH.
Now Ready, in 2 vols., post 8vo., 21s., bound,
NOTES OF A TWO YEARS' RESIDENCE AT NINEVEH;
AND TRAVELS IN MESOPOTAMIA, ASSYRIA, AND SYRIA,
WITH REMARKS ON THE CHALDEANS, NESTORIANS, YEZIDEES, ETC.
BY THE REV. J. P. FLETCHER,
Minister of St. Saviour's Church, Haverstock Hill.

These Travels embrace not only Nineveh and its antiquities, but various new and interesting particulars respecting the Yezidees, the Nestorians, and Oriental Christians, as well as notices of the country between Mosul and Aleppo, which has been explored by few European travellers. The intimate relations with the natives of the country entered into by Mr. Fletcher, who resided some years at Mosul, during his inquiries into the condition of the Oriental Churches, have furnished him with a vast fund of anecdote and illustration. The work also comprises disquisitions on the ancient cities of Mesopotamia, and on the successive empires established between the Tigris and Euphrates, with remarks on the hypothesis advocated by Major Rawlinson as regards the early Assyrian kings.

"A work of great merit—the remarks of a highly intelligent and acute observer. The work is not less acceptable as a book of travel than it is valuable as an auxiliary to the archaeology of the Holy Scriptures."—Standard.

"At a time when the startling discoveries of Mr. Layard have called public attention to the cradle of Asiatic civilization, the notes of a two years' residence on the mighty plain of Nineveh, and of excursions into the remotest parts of Assyria, from the pen of another traveller, cannot fail to excite more than ordinary interest. Mr. Fletcher, well versed in the questions connected with the geography of Scripture, and with the history and position of the different Churches of the East, made his observations on the countries which he visited, not as an ordinary traveller who picks up his knowledge casually, here and there, but as an experienced student, who knows beforehand upon what points he is to direct his inquiries. His volumes form an instructive and agreeable pendant to Mr. Layard's more exclusively antiquarian researches. The reader will meet with much valuable information, which he would look for in vain elsewhere."—John Bull.

"The extraordinary discoveries which Mr. Layard has of late made at Nimroud have given a special interest to all information coming from that locality; while the stirring events of which the Eastern parts of the world have become the scene give additional importance to any well-written narrative, which enters fully into a detail of passing events and circumstances. The present work of the Rev. Mr. Fletcher will, therefore, command considerable attention, for it communicates not only the incidents of a two years' residence in the immediate locality of Nineveh, but gives a further account of excursions into the most remote districts of Assyria, which are but little known at present. All these particular characteristics are detailed in a most agreeable manner, under the attractive form of an elegant style, combined with a matter-of-fact description, which stamps it as truthful and thoroughly to be depended upon. There is, therefore, every attraction about it to make it a most popular publication, and to render it as useful as it is entertaining."—Messenger.

HENRY COLBURN, PUBLISHER,

Now Ready, in 1 vol., (comprising as much matter as twenty ordinary volumes), with upwards of 1500 Engravings of Arms, &c., 38s. bound,

BURKE'S PEERAGE AND BARONETAGE,
FOR 1850.

NEW EDITION, CORRECTED THROUGHOUT TO THE PRESENT TIME, FROM THE PERSONAL COMMUNICATIONS OF THE NOBILITY, ETC.

The following is a List of the Principal Contents of this Standard Work:

I. A full and interesting history of each order of the English Nobility, showing its origin, rise, titles, immunities, privileges, &c.
II. A complete Memoir of the Queen and Royal Family, forming a brief genealogical History of the Sovereign of this country, and deducing the descent of the Plantagenets, Tudors, Stuarts, and Guelphs, through their various ramifications. To this section is appended a list of those Peers who inherit the distinguished honour of Quartering the Royal Arms of Plantagenet.
III. An Authentic table of Precedence.
IV. A perfect History of All the Peers and Baronets, with the fullest details of their ancestors and descendants, and particulars respecting every collateral member of each family, and all intermarriages, &c.
V. The Spiritual Lords.
VII. Peerages claimed.
VIII. Surnames of Peers and Peeresses, with Heirs Apparent and Presumptive.
IX. Courtesy titles of Eldest Sons.
X. Peerages of the Three Kingdoms in order of Precedence.
XI. Baronets in order of Precedence.
XII. Privy Councillors of England and Ireland.
XIII. Daughters of Peers married to Commoners.
XIV. All the Orders of Knighthood, with every Knight and all the Knights Bachelors.
XV. Mottoes translated, with poetical illustrations.

"Mr. Burke's 'Peerage and Baronetage' is the most complete, the most convenient, and the cheapest work of the kind ever offered to the public."—Sun.

"For the amazing quantity of personal and family history, admirable arrangement of details, and accuracy of information, this genealogical and heraldic dictionary is without a rival. It is now the standard and acknowledged book of reference upon all questions touching pedigree, and direct or collateral affinity with the titled aristocracy. The lineage of each distinguished house is deduced through all the various ramifications. Every collateral branch, however remotely connected, is introduced; and the alliances are so carefully inserted, as to show, in all instances, the connexion which so intimately exists between the titled and untitled aristocracy. We have also much most entertaining historical matter, and many very curious and interesting family traditions. The work is, in fact, a complete cyclopedia of the whole titled classes of the empire, supplying all the information that can possibly be desired on the subject."—Morning Post.
